# Introduction

**O&G Knowledge Sharing Platform** is introducing new concepts in training Oil & Gas Industry personnel. The companies will now be able to spend **50%** of their previous years' training budget and train the same number of personnel without jeopardizing quality. We are achieving these savings for your organization by coming directly to you and eliminating the intermediaries (training companies). We will be offering both (1) open public courses and (2) in-house courses at the clients' premises.

In this catalog, we provide the courses (with detailed description, outline and advantages) we currently offer to our clients. The courses have been carefully designed by the expert faculty of **O&G Knowledge Sharing Platform**. Our aim is to enhance return on your training investment. Each one of our faculty members is handpicked, considering their academic background, industry standing and experience. Each instructor has more than 35 years of practical experience and through their courses they share their immense knowledge with the participants.

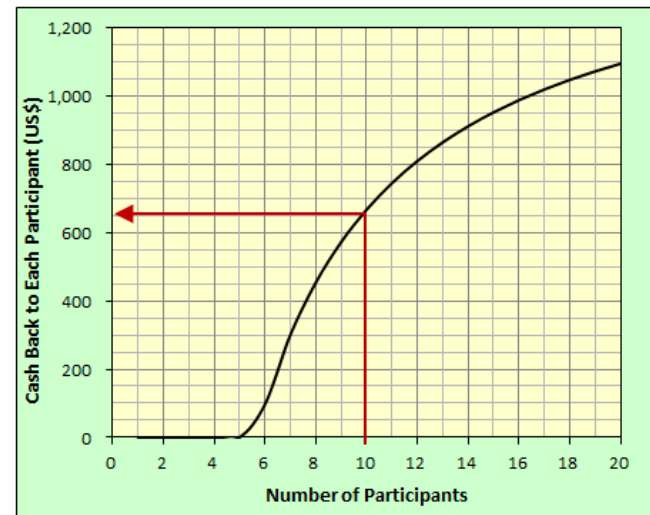

The Consortium provides enjoyable, creative learning through a range of formats that enable participants to rapidly develop their skills and knowledge. Our clients have the luxury of:

- Selecting from the courses in this catalog,
- Ask us to alter the contents (mix and match from other courses) to meet your specific learning goals and outcomes, or
- Design a tailor-made course to fit your organization's specific training requirements. We can design and deliver these tailored courses at your selected venues as and when convenient to you.

Choose any course from our comprehensive program portfolio and have it delivered anytime and anywhere. If you do not have enough participants to request for an in-house course, we will be offering these courses as open public courses in very near future.

For the open courses, we are introducing a **Profit Sharing** concept, again to help our clients to maximize return on their training budget. According to this concept the course fees will not be fixed instead it will be adjusted lower as we get more and more participants in a course.

The figure on the side shows how this concept works. This graph is for a 5-Day course in Dubai (UAE) with initial course fees of US\$ 3,500 per participant. This fee remains same until our breakeven point (6 participants in this case). After the breakeven point, 50% of the course fee (for incremental participants) is shared equally between all participants as a cashback. In short, if we have 10 participants in the course, every participant pays US\$ 2,850 for this 5-Day course instead of the US\$ 3,500 initially advertised. The cashback amount will depend upon the course venue and timing of the course. However, our participants will know in advance (as soon as the course and venue are confirmed) how the above figure will look like for each course.

The cashback could be issued as (a) a credit voucher to the organizations that they can use in future for sending delegates to other courses or (b) cash transferred to their specified bank account.

## **In-House Course Requests**

If you have more than five delegates, it may be economical to invite us to come to your office or selected venue and deliver a course to your personnel. We offer the following options for in-house courses.

1. Course from Our Portfolio – Select any course from our portfolio of courses to be delivered at your venue, on a mutually agreed desired date and exclusively for your personnel.
2. Customized Outline – Provide us the background of your expected personnel to be trained (education level, experience, area of emphasis and learning objectives) and our expert faculty will design a course to match your training requirement.
3. Mix & Match from Our Portfolio – Detailed outlines are given for the courses in our portfolio. You can select desired topics or sub-topics from these outlines. We will package these and deliver them to your personnel.
4. On-Demand Public Option–We offer public courses (listed in our portfolio of courses) at various locations worldwide and at various times during the year. If you prefer to have a certain course in a certain location that is not on our list, then please send us a proposal and we will, with your assistance, explore this option.

Our regularly offered courses and their contents are given in the Featured Course Catalog. The contents of these courses have been developed over a period of time and as requested by our clients. However, we are flexible to tailor the courses to your specific needs based on the experience and background of the prospective participants.

Even if you do not see a course that you may be interested in, please let us know. We have a network of specialists whom we can always engage to custom design a course as per your requirements.

# Notable Industry Contributions by Our Instructors

Our handpicked faculty are industry recognized Subject Matter Experts (SMEs). They will come to you with outstanding and unmatched credentials.

# List of our Clients & Growing

Over a very short period of time we have gained patronage of major companies and organizations for using us to train their employees. We have always received outstanding feedback from course participants. Repeated requests for training from these same companies every year is a proof of the quality of training we deliver.

# Petroleum/Project Economics

## 5 Project Economics, Risk & Decision Analysis

**Day** Instructor(s): M. A. Mian, Dr. S. Ghouri or Jenny Spalding

Gain in-depth knowledge of project economics analysis and decision-making.

This 5-Day course covers the setup of economic analysis cases, including the estimation of recoverable reserves, production profiles, commodity prices, and project costs – CAPEX, OPEX, taxes, royalties, transportation, depreciation, before-tax (BTAX) cash-flow, after-tax (ATAX) cash-flow, international fiscal regimes (production sharing agreement and concessionary system). The course starts from the basic required parameters of inflation, interest and time value of money. These concepts are then transformed into profitability indicators. Last but not the least, the profitability indicators are then used to make investment decisions.

Emphasis of the course is to bridge the gap between theoretical concepts and their practical limitations. The participants will be able to appreciate the amount of information that they never thought of. In addition to this, emphasis is also on the use of Excel's financial functions. This understanding is very critical when it comes to building economic cash-flow models. Over the years we have seen that participants really struggle with using the Excel functions correctly and this leads to mistakes that can be easily avoided.

Multiple choice problems are solved each day to reinforce the understanding of the concepts covered that day. Many tricks, not widely known, are shared with the participants. The concepts covered in this course are not restricted to downstream, upstream or petrochemical projects. These concepts can be used to evaluate any type of investment under consideration.

On Day 5, a comprehensive case study is performed by participants to be able to understand how the process takes place from scratch. Emphasis will be on the way the results are presented to management for project/investment approval.

### What will this course cover?

The basic objective of this course is to improve your risk and investment analysis by reinforcing your financial modelling techniques, investment evaluation and knowledge of project economics. The course will cover the basic economic evaluation concepts and their application in practice. On completion of this course you will receive a complimentary copy of the course leader's published book, "**Project Economics and Decision Analysis, Vol 1, 2<sup>nd</sup> Edition, 2011.**"

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the Investment Evaluation:</p> <ul style="list-style-type: none"> <li>• Learn how to reduce exposure and mitigate risks in projects and handling uncertainty</li> <li>• Clarify concepts such as: time value of money, cash-flow models, capital budgeting, IRR, NPV, income producing investments</li> <li>• Maximize the return on investments by good decision-making processes based on the commercial viability of projects</li> <li>• Improve your decision process, investment and opportunity analysis</li> <li>• Practice hands on experience in building your own economic evaluation models and solving case study based examples</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Planning and project managers</li> <li>• Oil &amp; gas engineers and geologists</li> <li>• Commercial managers and analysts</li> <li>• Economists &amp; business development personnel</li> <li>• Government officials</li> <li>• Business advisors</li> <li>• Asset managers</li> <li>• E&amp;P managers</li> <li>• Product managers</li> </ul>

**5 Day** **Advanced Project Economics, Risk & Decision Analysis**  
 Instructor(s): M. A. Mian

This, very intensive, 5-Day course goes beyond the routine deterministic economic evaluation of projects/investments. As the uncertainty in project/investment variables increase so is the need for the application of more sophisticated methods. The expected value analysis and Monte Carlo simulations are becoming popular in almost every industry that is subject to greater uncertainty.

This is a hand-on course in which the participants actually model a variety of problems with decision trees and Monte Carlo simulation. At the end of the course an integrated model is presented, which can be used for upstream economics of full field development.

It is expected that the participants have some basic knowledge of probability and its application. Probability distributions express professional judgments about risks and uncertainties and are carried through the calculations. This is a fast-paced course and emphasis is on practical techniques for immediate application.

**What will this course cover?**

This course will build on the deterministic economic evaluation techniques by incorporating probabilistic occurrence of the most uncertain variables in the project/investment. We will give a recap of the profitability indicators and their appropriate use. The same concepts will now apply to probabilistic profitability indicators. We will learn how to calculate expected values using Excel and decision trees and Monte Carlo Simulation. We will also cover value of information and it is calculated. On completion of this course you will receive a complimentary copy of the course leader’s published book, **“Project Economics and Decision Analysis – Probabilistic Models, Vol 2, 2<sup>nd</sup> Edition, 2011.”**

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand how to perform probabilistic analysis of projects/investments and interpret the result:</p> <ul style="list-style-type: none"> <li>• Describe the elements of the decision analysis process and the respective roles of management and the analysis team</li> <li>• Be able to understand the continuous probability distributions</li> <li>• Calculated expected values using Excel and Decision Tree</li> <li>• Tailor the existing Excel models to handle Monte Carlo simulation</li> <li>• Build Monte Carlo Simulation model using industry software, run the model and interpret results</li> <li>• Evaluate investment and design alternatives with decision tree analysis</li> <li>• Develop and solve decision trees for value of information (VOI) problems</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Planning managers</li> <li>• Oil &amp; gas engineers</li> <li>• Project managers</li> <li>• Analysts &amp; business development personnel</li> <li>• Commercial managers</li> <li>• Economists, business analysts &amp; business development personnel</li> <li>• Government officials, legal counsels &amp; negotiators</li> <li>• Geologists</li> <li>• Business advisors &amp; Asset managers</li> <li>• E&amp;P managers</li> </ul>

DAY 1	DAY 2	DAY 3	DAY 4	DAY 5
<p><b>Objective of the Course</b>  <b>Teaching Approach</b>  <b>Course Outline</b>  <b>Recap of the Deterministic Concepts</b></p> <ul style="list-style-type: none"> <li>• Why economic evaluation?</li> <li>• Typical profitability indicators</li> <li>• Types of investment decisions</li> <li>• Investment decision-making</li> <li>• Excel's financial functions</li> <li>• Loan amortization – Excel functions</li> <li>• Depreciation – Excel functions</li> <li>• Develop Excel sheet to calculate depreciation</li> </ul> <p><b>Use of Additional Tools</b></p> <ul style="list-style-type: none"> <li>• Wells calculator</li> <li>• Gas processing flow chart</li> <li>• NGLs calculator</li> </ul> <p><b>Management Presentation</b></p> <ul style="list-style-type: none"> <li>• Assumptions</li> <li>• Profitability Indicators</li> <li>• Sensitivity analysis</li> <li>• Waterfall chart</li> <li>• Two variable cross plot</li> <li>• Three variable cross plot</li> </ul> <p><b>Exercises/Problems</b></p> <ul style="list-style-type: none"> <li>• Gas field development economics</li> <li>• Develop two variable cross plot</li> </ul>	<p><b>Handling Uncertainty in Investments</b></p> <ul style="list-style-type: none"> <li>• Why decision analysis?</li> <li>• Handling uncertainty in Capital Investments</li> <li>• Tornado chart &amp; **5** **International Gas Markets & Economic Evaluation of Gas Projects**  
**Day** Instructor(s): M. A. Mian, Dr. S. Ghouri or Jenny Spalding

Gain in-depth knowledge of gas market and economic evaluation of gas projects.

This 5-Day course covers the dynamics of the gas industry. The gas market section provides general industry overview, nature of natural gas, the global market place, estimating gas reserves, petroleum resources management system, development and economics of shale gas and impact of shale gas on LNG market.

The second part provides setup of economic analysis cases, including the estimation commodity prices, project costs – CAPEX, OPEX, taxes, royalties, transportation, depreciation, before-tax (BTAX) cash-flow, after-tax (ATAX) cash-flow, international fiscal regimes (production sharing agreement and concessionary system). The course starts from the basic required parameters of inflation, interest and time value of money. These concepts are then transformed into profitability indicators. Last but not the least, the profitability indicators are then used to make investment decisions.

Emphasis of the course is to bridge the gap between theoretical concepts and their practical limitations. In addition to this, emphasis is also on the use of Excel’s financial functions. This understanding is very critical when it comes to boiling economic cash-flow models.

Multiple choice problems are solved each day to reinforce the understanding of the concepts covered that day. Many tricks, not widely known, are shared with the participants. The concepts covered in this course are not restricted to downstream, upstream or petrochemical projects. These concepts can be used to evaluate any type of investment under consideration.

**What will this course cover?**

The basic objective of this course is to provide overall dynamics of the gas market/industry and improve your risk and investment analysis by reinforcing your financial modelling techniques, investment evaluation and knowledge of project economics. The course will cover the basic economic evaluation concepts and their application in practice. On completion of this course you will receive a complimentary copy of the course leader’s published book, **“Project Economics and Decision Analysis, Vol I, 2<sup>nd</sup> Edition, 2011.”**

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the Investment Evaluation:</p> <ul style="list-style-type: none"> <li>• Understand the dynamics of gas market, monetization of shale gas and impact of shale gas on LNG imports</li> <li>• Learn how to reduce exposure and mitigate risks in projects and handling uncertainty</li> <li>• Clarify concepts such as: time value of money, cash-flow models, capital budgeting, IRR, NPV, income producing investments</li> <li>• Maximize the return on investments by good decision-making processes based on the commercial viability of projects</li> <li>• Improve your decision process, investment and opportunity analysis</li> <li>• Practice the hands-on experience in building your own economic evaluation models and solving case study based examples</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Planning managers</li> <li>• Oil &amp; gas engineers</li> <li>• Project managers &amp; business development personnel</li> <li>• Analysts</li> <li>• Commercial managers</li> <li>• Economists</li> <li>• Government officials</li> <li>• Geologists</li> <li>• Business advisors, Product managers &amp; Asset managers</li> <li>• E&amp;P managers</li> </ul>

**5 Day** **Global Oil Economics & Petroleum Project Evaluation**  
 Instructor(s): M. A. Mian, Dr. S. Ghouri or Jenny Spalding

This 5-Day course is logically divided into the following three parts.

1. **Part 1 – Global Oil Economics & Corporate Strategic Planning**
  - a. Provide extensive exposure to the complex management issues presently confronting the international petroleum economy
  - b. Strengthen your understanding of the business drivers
2. **Part 2 – Petroleum Investment Evaluation & Investment Decision-Making**
  - a. Understand the factors that influence the economic evaluation of oil and gas projects
  - b. Appropriate use of profitability indicators to make decisions
  - c. Understand limitations of methods used in evaluation
3. **Part 3 – Accounting for Uncertainty in Investment Evaluation**
  - a. Understand the application of probability in investment analysis
  - b. Use Decision Trees and Monte Carlo Simulation to incorporate uncertainty in economic evaluation.

**What will this course cover?**

The basic objective of this course is to provide overall dynamics of the global oil economics and improve your risk and investment analysis by reinforcing your financial modelling techniques, investment evaluation and knowledge of project economics. The course will cover the basic economic evaluation concepts and their application in practice. On completion of this course you will receive a complimentary copy of the course leader’s published book, **“Project Economics and Decision Analysis, Vol I, 2<sup>nd</sup> Edition, 2011.”**

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the Investment Evaluation:</p> <ul style="list-style-type: none"> <li>• Understand the dynamics of global oil economics</li> <li>• Be able to understand the management challenges and how to cope with it</li> <li>• Learn how to reduce exposure and mitigate risks in projects and handling uncertainty</li> <li>• Clarify concepts such as: time value of money, cash-flow models, capital budgeting, IRR, NPV, income producing investments</li> <li>• Maximize the return on investments by good decision-making processes based on the commercial viability of projects</li> <li>• Improve your decision process, investment and opportunity analysis</li> <li>• Practice the hands-on experience in building your own economic evaluation models and solving case study based examples</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Planning managers</li> <li>• Oil &amp; gas engineers</li> <li>• Project managers</li> <li>• Analysts &amp; Commercial managers</li> <li>• Economists</li> <li>• Government officials</li> <li>• Geologists</li> <li>• Business advisors</li> <li>• Asset managers</li> <li>• E&amp;P managers</li> <li>• Product managers &amp; business development personnel</li> </ul>

**3** **Shale Gas Development & Economics**  
**Day** Instructor(s): M. A. Mian

The shale gas is considered as a “game changer” for the US and global gas markets. Gas production from the shale gas in US has significantly reduced US gas imports in the last five years. The US Energy Information Administration (EIA), US Department of Energy, is forecasting US dependence on imported gas to reduce to 1% by 2035 from the current 11% of the US’s annual gas consumption. The shale gas has become a common discussion topic in the industry as nobody wants to miss the opportunities that are related to the exploitation of gas from these resources. Critical review of the current and future potential of shale gas plays in Poland, China, India, UK, France, Canada, Mexico and US will be given. This 3-day course is specifically designed for those who are inquisitive about shale gas and related prospects applicable to many different disciplines. The course provides a birds’ eye view of the entire shale gas industry, i.e. geology, global prospects, drilling, fracturing, technical challenges in exploiting deeper unconventional resources, cost of development, gas pricing, challenges to the LNG market, opportunities, and so on. Mian (our popular course leader) will share his personal experiences of working with the unconventional reservoirs. Mian has an uncanny knack of presenting difficult technical topics in layman language.

**What will this course cover?**

The course covers the basic difference between conventional and unconventional oil and gas. The unconventional gas is from tight gas, shale gas and coalbed methane. In these three we will go over the properties of shale gas, factors necessary for the monetization of shale gas, global distribution of technically recoverable shale gas resources, cost of development, production forecast, number of wells required for development and economics.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the shale gas resources and what is required to economically develop these resources:</p> <ul style="list-style-type: none"> <li>• Appreciate the costs involved and the associated risks</li> <li>• Discover the global distribution of the shale gas resources</li> <li>• Enable you to recover your investment in this course multi-fold</li> <li>• Explore what shale gas has to offer you as investor</li> <li>• Gain broader knowledge of the shale gas industry</li> <li>• Identify how your gas industry can capitalize on the learning curve of US's shale gas experience</li> <li>• Know how it has reduced US's dependence on LNG imports</li> <li>• Learn about the technologies that have made the shale gas exploitation possible</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Engineers and geoscientists</li> <li>• Government regulators</li> <li>• Economists and planners</li> <li>• Facilities planning engineers</li> <li>• The C-Level executives</li> <li>• Business development personnel</li> <li>• Finance and legal personnel</li> <li>• Stock traders</li> <li>• Business development personnel</li> </ul>

DAY 1	DAY 2	DAY 3
<p><b>Classification of Natural Gas</b></p> <ul style="list-style-type: none"> <li>• Types of gas accumulations</li> <li>• Unconventional gas resources</li> <li>• Classification of natural gas</li> <li>• Typical composition of natural gas</li> <li>• Properties of pure gases</li> <li>• The gas resource triangle</li> <li>• Gas processing</li> <li>• British Thermal Unit</li> </ul> <p><b>Global Gas Resources &amp; Utilization</b></p> <ul style="list-style-type: none"> <li>• Reserves terminology</li> <li>• Global energy mix</li> <li>• Global natural gas reserves</li> <li>• Global natural gas production</li> <li>• Global natural gas consumption</li> <li>• Global gas production forecast</li> <li>• Global gas consumption forecast</li> <li>• Global gas reserves replacement ratio</li> <li>• Gas added value products</li> </ul> <p><b>Definitions - Reserves versus Resources</b></p> <ul style="list-style-type: none"> <li>• Reserves' categories</li> <li>• Proved reserves versus resources</li> <li>• Gas forecast - rules of thumb</li> </ul> <p><b>Unconventional Gas (UG)</b></p> <ul style="list-style-type: none"> <li>• Why is it called unconventional</li> <li>• Shale gas</li> <li>• Shale gas versus conventional gas</li> <li>• Importance of shale gas</li> <li>• Sedimentary rocks</li> <li>• Geology of natural gas resources</li> <li>• Monetizing unconventional gas</li> <li>• Global shale gas resources</li> </ul> <p><b>Shale Gas Plays in USA</b></p> <ul style="list-style-type: none"> <li>• Average properties of US shale gas plays</li> <li>• Shale gas production in USA</li> <li>• Global unconventional gas production</li> <li>• US gas production forecast</li> </ul> <p><b>Shale Gas in other Regions</b></p> <ul style="list-style-type: none"> <li>• Mexico &amp; Canada</li> <li>• China</li> <li>• United Kingdom, France &amp; Poland</li> <li>• Australia</li> </ul>	<p><b>Shale Gas Development</b></p> <ul style="list-style-type: none"> <li>• Elements of successful shale gas play</li> <li>• Factors influencing UCG monetization</li> <li>• Vertical &amp; horizontal wells</li> <li>• Benefits of horizontal wells</li> <li>• Formation fracturing</li> <li>• Hydraulic fracturing (vertical well)</li> <li>• Hydraulic fracturing (horizontal well)</li> <li>• Fracturing horizontal wells</li> <li>• Barnett shale well completions</li> <li>• Maximizing reservoir contact</li> <li>• Types of fractures</li> <li>• Fracturing - data requirement</li> <li>• Fracture orientation</li> <li>• Drainage area in UCG wells</li> <li>• Microseismic technology</li> <li>• Microseismic monitoring</li> <li>• Microseismic mapping</li> <li>• Tilt meter mapping</li> <li>• Refracturing &amp; fracture re-orientation</li> <li>• Well drainage orientation</li> </ul> <p><b>Enablers for UG Development</b></p> <ul style="list-style-type: none"> <li>• Possible constraints on future gas supply</li> <li>• UCG enablers</li> <li>• Recognize the paradigm shift</li> <li>• Prove concepts</li> <li>• Capabilities, knowledge and experience</li> </ul> <p><b>UG Development Concerns</b></p> <ul style="list-style-type: none"> <li>• Challenges</li> <li>• Environmental concerns</li> <li>• Water pollution</li> <li>• Water consumption</li> <li>• Regulatory framework</li> <li>• Adequate permitting system</li> <li>• Challenges to regions other than N. **2** **Overview of Forecasting Techniques and Applications of EViews**  
**Day** Instructor(s): Dr. Salman Ghouri

Gain in depth knowledge of forecasting theory, fundamentals and techniques that help in generating short and long-term forecasts.

This 2-Day course is structured in such a manner that it provides the basic concepts of forecasting theory, why we forecast, how to build your model to back initially qualitative assessment of historical data, in an effort to understand the relationship between dependent and independent variables. The course is designed to help in understanding the concept of forecasting. Crude oil and natural gas forecasts will be generated in the class.

**What will this course cover?**

The basic objective of this short course is to improve and train the professionals to carryout in-house long-term oil and gas price forecast that is used as key input in carrying out economic evaluation of oil and gas projects, preparation of corporate business plan and forecast budget prices for preparing annual budget. It also facilitates sales professionals to forecast their products' sales/revenues forecast.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to understand the basic theory and forecasting techniques.</p> <ul style="list-style-type: none"> <li>• Learn the basic theory of forecasting</li> <li>• Qualitative assessment of historical trends</li> <li>• Identification of key parameters</li> <li>• Data collection and feeding in EViews</li> <li>• Formulation of models</li> <li>• How to use EViews techniques</li> <li>• Running of econometric models</li> <li>• Analyzing and interpretation of the estimated results</li> <li>• Selection of best model and re-running to forecast.</li> </ul>	<p>The following oil, gas or any other businesses professional will benefit from the knowledge and techniques shared in this course.</p> <ul style="list-style-type: none"> <li>• Planning managers</li> <li>• Oil &amp; Gas engineers</li> <li>• Project managers</li> <li>• Commercial managers</li> <li>• Economists</li> <li>• Analysts</li> <li>• Sales professionals</li> <li>• Finance</li> <li>• Government agencies</li> <li>• Utility companies professionals</li> </ul>

DAY 1	DAY 2
<p><b>Basic Theory &amp; Concepts of Forecasting:</b></p> <ul style="list-style-type: none"> <li>• Historical trends</li> <li>• Forecast vs Predication</li> <li>• Forecast turns out to be wrong</li> </ul> <p><b>Forecasting Fundamentals</b></p> <ul style="list-style-type: none"> <li>• Why do we forecast?</li> </ul> <p><b>Major Steps in Forecasting</b></p> <p><b>Forecasting Techniques</b></p> <ul style="list-style-type: none"> <li>• Linear Trend</li> <li>• Exponential Trend</li> <li>• First Order Autoregressive</li> <li>• 2nd Order Autoregressive</li> <li>• Koyck Model</li> <li>• Random Walk</li> </ul> <p><b>Some Basic Examples</b></p> <p><b>Identification of Key Drivers - Brainstorm</b></p> <ul style="list-style-type: none"> <li>• Qualitative analysis</li> <li>• Theoretical background</li> <li>• Developing econometric models</li> <li>• Feeding the data</li> <li>• Running and analysis of estimated results</li> <li>• Re-run the model to forecast</li> <li>• Draw a comparison with other international agencies/consultants forecasts</li> </ul> <p><b>Case Studies</b></p> <ul style="list-style-type: none"> <li>• Construction of Simple US Crude Oil Demand Model (Case Study)</li> <li>• GDP forecast - Case study</li> <li>• Oil price forecast - Case Study <ul style="list-style-type: none"> <li>• Construction of long-term oil price forecast model <ul style="list-style-type: none"> <li>• Scenario Analysis</li> <li>• Comparison with other International Agencies/ Forecast</li> </ul> </li> </ul> </li> <li>• Natural gas price forecast - Case Study <ul style="list-style-type: none"> <li>• Natural gas price forecast</li> <li>• Natural gas prices in various markets - historical trends</li> <li>• Henry Hub (HH USA)</li> <li>• National Balancing Point (NBK UK)</li> <li>• Natural gas prices in Asia</li> <li>• Relationship with crude oil prices</li> <li>• Is this relationship continues?</li> <li>• How unconventional gas and new LNG supplies affect this relationship?</li> <li>• Lessons learnt from history - element of uncertainty</li> </ul> </li> </ul>	<p><b>Forecasting techniques and use of EViews Applications</b></p> <ul style="list-style-type: none"> <li>• Use of EViews - Statistical software (A brief Overview)</li> <li>• How to create new work file <ul style="list-style-type: none"> <li>• Frequency - annual, semi-annual, quarterly, monthly, weekly</li> <li>• Start date</li> <li>• End date</li> </ul> </li> <li>• Object - New Object <ul style="list-style-type: none"> <li>• Selection of data series name - short &amp; precise</li> <li>• Generate all the required data series name in your model</li> </ul> </li> <li>• How to input data series</li> <li>• Importing data from Excel <ul style="list-style-type: none"> <li>• Data series as to be vertical - descending order in your data source - Excel</li> <li>• In EViews select the data series for which data to be imported.</li> </ul> </li> <li>• Quick/Generate data series <ul style="list-style-type: none"> <li>• Transform your data series as required. For example, you need to transform your data series in log form use this command - GDP in log form - <math>LGDP=\log(GDP)</math></li> </ul> </li> <li>• Running Model <ul style="list-style-type: none"> <li>• Selection of Model</li> <li>• Simple Static Model</li> <li>• Linear Trend</li> </ul> </li> <li>• Exponential Trend <ul style="list-style-type: none"> <li>• First Order Autoregressive</li> <li>• 2nd Order Autoregressive</li> </ul> </li> <li>• Koyck Model</li> <li>• Random Walk</li> <li>• Lag Structure</li> <li>• Polynomial Distributed Lag Model</li> <li>• Running Regression</li> <li>• Forecasting</li> <li>• A number of examples/case studies</li> </ul>

### 3 Shariah Compliant Project Financing in the Oil & Gas Industry

**Day** Instructor: Dr. Aly Khorshid

This 3-Day course is designed to show how the Shariah Compliant financing can help the oil and gas industry's financial crunch. Islamic Finance has reached 2 trillion US Dollars in the global market. Islamic banks and Islamic financial institutions are in desperate need for new innovative financial Engineering Shariah compliant products to meet the growing demands for Islamic finance business, and also to compete head to head with conventional financial business.

Post the credit crises; Islamic banks are now faced with unusual liquidity problem due to lack of investment opportunities complying with Shariah. New innovative products such as Commodity Derivatives, Forwards and Futures need to be re-structured to comply with Shariah. Risk management issues must perceive in any structure within Shariah compliant financial engineering. Risk Management and Compliance one of the most important functions that Islamic Banks undertake to protect shareholders as well as stockholders profit and loss, it's also the main requirements by the central bank. This course will inspect all aspects of financial engineering and Risk management particularly Credit risk and all other related risk that Islamic bank's and Islamic Financial institutions have to conform to. Furthermore, this course covers applied and technical Shariah perspective based on its current operating principle within Islamic finance to explore a possible problem solving and good values of new proposition of alternative Islamic deposit structure in accordance with hybrid Shariah principles.

Dr. Khorshid will address the following key Issues in this unique course:

- Can Islamic Finance be used in the Oil and Gas industry?
- Does Islamic Finance Investment offer tools suitable for Oil and Gas project financing?
- Islamic Finance Investment in Oil and Gas Industry, Risk Management and ways to reduce Risks related to investment
- Structuring innovative Islamic Finance investment fund for the Oil and Gas industry with particular reference to Sukuk structure
- Developing Project finance investment fund using Conventional methodology (Western style including borrowing) Vs. Islamic Finance methodology option (Exclude borrowing, Profit & Loss and Risk sharing)
- Shariah Parameters for Significant Product Innovation, and its Contemporary Shariah Issues

#### What will this course cover?

Each day the course will cover several modules related to Islamic financing and its applicability to the oil and gas industry.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the mechanics of Islamic financing:</p> <ul style="list-style-type: none"> <li>• Shariah Parameters for Significant Product Innovation, and its Contemporary Shariah Issues</li> <li>• Risk management</li> <li>• Financial engineering</li> <li>• Islamic finance tools that are suitable for Oil and Gas industry</li> <li>• Solving pressing Financial engineering issue that may be missed or misused by your organization</li> <li>• Developing effective Risk Managements tools that will enhance your organization performance</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• CFOs</li> <li>• Treasurers</li> <li>• Directors</li> <li>• Managers</li> <li>• Auditors</li> <li>• Executives</li> <li>• Consultants and Regulators responsible for Risk Management</li> </ul>

DAY 1	DAY 2	DAY 3
<p><b>Deposit &amp; Investment product engineering based on</b></p> <ul style="list-style-type: none"> <li>• Wadiah contract</li> <li>• Mudarabah contract</li> <li>• Wakalah Bil Istishmar contract</li> <li>• Tawarruq contract other hybrid structure</li> </ul> <p><b>Islamic financing product development based on</b></p> <ul style="list-style-type: none"> <li>• Murabahah (MPO) contract</li> <li>• Tawarruq arrangement</li> <li>• Istisna' / Muqawalah contract</li> <li>• Parallel Salam contract</li> </ul> <p><b>Islamic financing product development based on</b></p> <ul style="list-style-type: none"> <li>• Financial Ijarah contract</li> <li>• Musharakah contract</li> <li>• Musharakah Mutanaqisah contract</li> <li>• Wakalah project structure issues and its challenges in</li> </ul> <p><b>Prevalent contemporary and other issues and its challenges in</b></p> <ul style="list-style-type: none"> <li>• Deposit innovation and proposed solutions</li> <li>• Retail financing innovation and proposed solutions</li> <li>• Corporate / commercial innovation and proposed solutions</li> <li>• Micro finance innovation and proposed solutions</li> </ul>	<p><b>Principals of risk management</b></p> <ul style="list-style-type: none"> <li>• Risk management in conventional financial institutions</li> <li>• Risk Management issue, requirements, and compliance</li> <li>• Risks Management Assessment, Treatment, Avoidance, shifting, reduction, and retention</li> </ul> <p><b>Conventional Banks vs. Islamic Banks Risks Cases from various banks</b></p> <p><b>Islamic Banks products AND Risks associated with each product</b></p> <ul style="list-style-type: none"> <li>• Musharakh</li> <li>• Mudarabah</li> <li>• Murabaha</li> <li>• Ijarah</li> <li>• Istisna'a</li> <li>• Salam</li> <li>• Sukuk</li> <li>• Tawaroq</li> </ul> <p><b>Credit Risk in Banks and how can Islamic Banks reduce Credit Risk?</b></p> <ul style="list-style-type: none"> <li>• Equity investment risk</li> <li>• Market risk</li> <li>• Liquidity risk</li> <li>• Currency risk</li> <li>• Rate of return risk</li> <li>• Operational risk</li> <li>• Compliance risk</li> <li>• Shariah risk and Shariah non-compliance Risk</li> <li>• Legal risk and compliance</li> <li>• Anti-Money Laundering</li> <li>• Basil II, Pillar 1&amp;2 Requirements</li> <li>• Fiduciary risk</li> </ul> <p><b>Risk sharing issue for Islamic Banks</b></p> <p><b>Case Study: Remedies of non-Shariah compliant Risk</b></p>	<p><b>What is financial engineering? # International Petroleum Management

**5** **Oil & Gas Accounting & Financial Management**  
**Day** Instructor(s): Mr. Saket Modi, CPA

The objective of this 5-day course is to (a) understand the terminology and concepts used in oil and gas accounting in IFRS, (b) interpret and apply relevant accounting policies and standards including analysis of issues in exploration, drilling, development and production stages, (c) apply the principles in IFRS 9 Financial Instruments, IFRS 15 Revenue from Contracts with Customers and IFRS 16 Leases, (d) analyze disclosures in the financial statements including those relating to reserve data and supplemental disclosures, (e) analyze accounting for joint arrangements and production sharing contracts, (f) obtain an overview of accounting and legal arrangements encountered in international operations, and (g) consider implications for financial management, planning and analysis

<b>TEACHING METHODS</b>	<b>WHO WILL BENEFIT?</b>
<p>We facilitate learning through a combination of techniques listed below:</p> <ul style="list-style-type: none"> <li>• Pre-workshop questionnaire for participants to confirm their expectations</li> <li>• Presentation of core knowledge and concepts in simple and clear language</li> <li>• Examples and real-world case studies to enable learning by doing including group discussions</li> <li>• Regular summaries and short case studies to confirm achievement of learning outcomes</li> <li>• Opportunities for participants to ask relevant questions and clarify their understanding of the topics</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course:</p> <ul style="list-style-type: none"> <li>• Managers &amp; Supervisors in accounting and finance teams who want to improve their IFRS knowledge</li> <li>• Managers/Supervisors who do not come from these areas but want to understand the accounting and financial aspects of the oil and gas industry</li> <li>• Bankers working with the oil and gas industry</li> <li>• Oil and Gas industry personnel directly or indirectly involved in accounting, treasury operations, financing, payroll, budgeting etc.</li> </ul>

## FUNDAMENTALS OF OIL & GAS OPERATIONS

- History of oil & gas
- Definitions
  - Upstream operations
  - Reserves
  - Midstream operations
  - Downstream operations

## IFRS FUNDAMENTALS FOR OIL & GAS

- Financial reporting frameworks
- Key IFRSs for oil and gas companies
- Exploration and evaluation costs
- Overview of financial reporting methods
  - Successful efforts vs. full cost
  - Application of IFRS 6

## IFRS ACCOUNTING FOR NON-CURRENT ASSETS

- IAS 16 Property, Plant & Equipment
  - Depreciation methods
  - Subsequent measurement
- IAS 38 Intangible Assets
- IAS 36 Impairment of Assets

## ACCOUNTING ISSUES IN EXPLORATION & EVALUATION

- Pre-exploration activities
- Successful efforts method (FAS 19)
  - Acquisition costs
  - Exploration costs (drilling vs non-drilling)
  - Unproved vs. proved property
  - Development and production costs
  - Impairment
- Full cost method (US GAAP)
- IFRS 6 approach
  - Overview
  - Initial measurement
  - Exploration and evaluation costs
  - Subsequent measurement
  - Variants on successful efforts method

## IFRS ACCOUNTING ISSUES IN DEVELOPMENT

- Classification of development assets: IAS 16 vs. IAS 38
- Impairment of development assets
- Development assets: IFRS vs. US GAAP
- Exploration vs. development
- Exploration drilling & suspended wells
- Full cost method

## BORROWING COSTS

- Principles of capitalization of borrowing costs
  - Suspension & cessation of capitalization

## PROVISION & ASSET RETIREMENT OBLIGATION

- Provisions
  - Recognition criteria
  - Legal vs. constructive obligations
- Measurement
- Accounting issues in asset retirement obligations

## ACCOUNTING ISSUES IN PRODUCTION STAGE

- Depreciation methods
- Component approach to depreciation
- Expenses and other production costs
  - Allocation of indirect costs

## LEASES

- Scope of IFRS 16 Leases
- Overview of changes from IAS 17 Leases
  - Definition of lease
  - Lease & non-lease components
  - Exemptions
  - Determination of lease term
  - Measurement of lease liability and right-of-use asset
  - Sale & leaseback transactions
- Lessor accounting
- Transition to IFRS 16 Leases (effective 1 January 2018)

## IMPAIRMENT OF ASSETS

- Indicators of impairment
- Measurement of impairment
  - Recoverable amount vs. carrying amount
  - Impairment of exploration & evaluation assets
  - Cash generating units
- Reversals of impairment

## FINANCIAL INSTRUMENTS & FINANCIAL RISK MANAGEMENT

- Overview of financial risks in oil & gas company
- IAS 32 Presentation of Financial Instruments
  - Financial liability vs. equity
  - Compound financial instruments
- IFRS 9 Classification & Measurement
  - Classification of financial assets and financial liabilities
  - Measurement: Amortized cost vs. fair value
- IFRS 9 Hedge Accounting
  - Overview of financial risks and hedging
  - Derivatives and hedge accounting
  - Types of hedges in IFRS
  - Alternatives to hedge accounting

## RESERVES REPORTING

- US SEC vs. IFRS
- Definitions
- Analysis of disclosures

## IFRS 15 REVENUE RECOGNITION

- Core principle
- Application of five-step framework
- IFRS 15 Application guidance
  - Contract costs
  - Application to oil & gas industry

## JOINT AGREEMENTS

- Types of joint arrangements
- Accounting for joint arrangements
  - Cash calls
  - Under & over-lift entitlement method
- Conveyances in oil & gas

## INTERNATIONAL PETROLEUM AGREEMENTS

- Typical production sharing mechanics
- Production sharing contracts
  - Overview and basic features
  - Accounting and reporting
- Overview of contractual & legal arrangements
- Fiscal terms
- Forms of government take
- Typical contract documents

## FINANCIAL MANAGEMENT

- Cost of capital
- Capital structure
- Working capital

**3**  
**Day** **Economics of Production Sharing Agreements (PSA/PSC)**  
Instructor(s): M. A. Mian, Dr. S. Ghouri or Jenny Spalding

This 3-Day course in Economics of Production Sharing Agreements is an extensive hands-on seminar. The seminar participants will gain familiarity with the general mechanics of the production sharing agreements (PSA/PSC) and be able to fully appreciate the effects of various terms and conditions on the Government Take and Investor's profitability. This hands-on seminar will enable the participants to design the terms of production sharing agreements on their own and be able to defend their approach to higher management and government entities. Excel will be extensively used in order to physically see the impact of various terms and conditions on the government take and investor profitability. The objective of the course is to enable the participants design efficient fiscal systems in order to avoid renegotiation of these long-term contracts. In short, the objective of the course is to:

- Gain full insight into the latest advances in designing production sharing systems
  - What the deals involve
  - Who gets what and how much
  - Expectations of the parties involved
  - The bottom-line
  - How the contract should adjust to marginal discovery and a bonanza
- Appreciate the significance of various terms used in these contracts
- Master the technical and non-technical terms and jargon applicable to the production sharing agreements
- Gain benefits that are direct, immediate and measurable

**What will this course cover?**

Each day of the course is divided in two parts (a) presenting theoretical concepts and mechanics of the PSA and (b) solving a variety of problems/exercises to reinforce the theoretical concepts. All calculations will be performed using MS Excel.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the mechanics of production sharing agreements/contracts:</p> <ul style="list-style-type: none"> <li>• Understand the effect of various factors on the contractor's profitability and host government's take</li> <li>• Be able to appreciate the importance of fiscal terms</li> <li>• The best global practices for PSA/PSC</li> <li>• And finally, be able to craft efficient PSA/PSC</li> <li>• Understand the legal relationship between host governments and companies</li> <li>• solving case study based examples</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Planning managers</li> <li>• Oil &amp; gas engineers</li> <li>• Project managers</li> <li>• Analysts &amp; Commercial managers</li> <li>• Economists, business analysts &amp; business development personnel</li> <li>• Government officials, legal counsels &amp; negotiators</li> <li>• Geologists</li> <li>• Business advisors, Asset managers &amp; business development personnel</li> <li>• E&amp;P managers</li> </ul>

DAY 1	DAY 2	DAY 3
<p><b>Fiscal Regimes/Fiscal Systems</b></p> <ul style="list-style-type: none"> <li>• International agreements</li> <li>• Parties to Production Sharing Agreement (PSA)</li> <li>• Ideal fiscal system for government</li> <li>• Ideal fiscal system for contractor</li> <li>• Oil and gas resources ownership</li> <li>• The need for collaboration</li> </ul> <p><b>Government Participation</b></p> <ul style="list-style-type: none"> <li>• Crafting fiscal terms - what to look for?</li> <li>• Government participation</li> <li>• Key aspects of government participation</li> <li>• Do contractors prefer government participation</li> <li>• Commerciality</li> </ul> <p><b>Types of Contracts/Agreement</b></p> <ul style="list-style-type: none"> <li>• Contractual arrangements</li> <li>• Main differences between PSA and Royalty/Tax system</li> <li>• PSA cash-flow distribution</li> <li>• PSA numerical example</li> <li>• PSA sample cash-flow</li> <li>• Effect of HG take on contractor economics</li> </ul> <p><b>Designing Production Sharing Agreements</b></p> <ul style="list-style-type: none"> <li>• Key questions in designing PSA</li> <li>• Efficient PSA?</li> <li>• Protecting the foreign investment</li> <li>• Contract duration and extensions</li> <li>• Minimum work program commitment (MWPC)</li> <li>• Each PSA is unique</li> </ul> <p><b>Contract Documents</b></p> <ul style="list-style-type: none"> <li>• Upstream project agreement</li> <li>• Other agreements</li> <li>• Relinquishment</li> </ul> <p><b>Problems/Exercises</b></p>	<p><b>Forms of Government Take</b></p> <ul style="list-style-type: none"> <li>• Government take</li> <li>• Nature of government take</li> <li>• Bonuses</li> <li>• Signature bonus through bidding</li> <li>• Signature bonus through negotiation</li> <li>• Production bonuses</li> <li>• Examples of production bonuses</li> <li>• Rentals/surface fees</li> <li>• Sliding scale tranches</li> <li>• Royalties</li> <li>• Royalties - two dimensional link</li> <li>• Royalties - other types of sliding scale</li> <li>• S-curves for tax and royalties</li> </ul> <p><b>Profit Oil (PO) &amp; Cost Oil Splits in PSAs</b></p> <ul style="list-style-type: none"> <li>• Petroleum costs</li> <li>• Fixed profit oil split</li> <li>• Progressive profit oil split</li> <li>• Some examples of profit oil splits</li> <li>• Profit oil splits based on cumulative production</li> <li>• Cost recovery (CR) - two dimensional link</li> <li>• S-curves for CR and PO</li> </ul> <p><b>Treatment of Various Costs</b></p> <ul style="list-style-type: none"> <li>• Corporate income tax (CIT)</li> <li>• Treatment of bonuses</li> <li>• Operating expenditure (OPEX)</li> <li>• Capital expenditure (CAPEX)</li> <li>• Interest on Loan</li> <li>• Loss carried forward</li> <li>• Loss carried forward limits</li> <li>• Depletion allowance</li> <li>• Uplift or investment credit</li> <li>• Tax credits</li> </ul> <p><b>Government Participation</b></p> <ul style="list-style-type: none"> <li>• Back-in options</li> <li>• Payments in back-in options</li> <li>• Carried interest</li> </ul> <p><b>Problems/Exercises</b></p>	<p><b>Effect of Various Terms on Profitability</b></p> <ul style="list-style-type: none"> <li>• Effect of Various Terms on Profitability</li> <li>• Upfront bonuses and taxes (front end loading index)</li> <li>• Ring fencing</li> <li>• Effect of ring fencing on GT</li> <li>• Effect of uplift on GT</li> <li>• Effect of depreciation on GT</li> <li>• Combined effect of depreciation &amp; uplift on GT</li> <li>• Effect of loss carried forward on GT</li> </ul> <p><b>Decommissioning</b></p> <ul style="list-style-type: none"> <li>• Decommissioning plan</li> <li>• Decommissioning costs</li> <li>• Ownership and transfer of assets upon termination</li> <li>• Liability and insurance</li> </ul> <p><b>Economic Assessment of International Contracts</b></p> <ul style="list-style-type: none"> <li>• Effect of GT on contractor's economics</li> <li>• Government take (NCF versus NPV)</li> <li>• Contractor's IRR</li> <li>• Schematic of net cash-flow</li> </ul> <p><b>Incremental Analysis</b></p> <ul style="list-style-type: none"> <li>• Incremental analysis</li> <li>• Investment scenarios</li> <li>• Gold plating</li> </ul> <p><b>The Bidding Process</b></p> <ul style="list-style-type: none"> <li>• Financial capability of company</li> <li>• Technical capabilities</li> <li>• Information related to legal aspect of the company</li> <li>• Setting up data rooms</li> <li>• Sealed bids</li> </ul> <p><b>Bids' Evaluation</b></p> <p><b>Current Trends in Fiscal Systems</b></p> <p><b>Problems/Exercises</b></p>

## 5 Day Gas/LNG Contracts

Instructor(s): Olga Labai, International Law

This 5-day course will cover a wide variety of topics that are related to the legal aspects of Gas & LNG Contracts. Real life cases will be discussed in the course and the participants will be involved in real life case studies.

### What Will You Learn?

By the end of this course you will be able to:

- Overcome the difficulties and develop the skills to negotiate the ideal Sales & Purchase Agreement (SPA).
- Understand all the contracts and how natural gas and LNG projects are structured.
- Identify and minimize risks involved in contracts.
- Understand the LNG pricing
- Terms related to Gas Sales Agreement
- Development & fiscal agreement
- Joint venture agreement
- LNG Sale & Purchase Agreement
- The Terminal Use Agreement
- Engineering procurement and construction contract (EPC)
- LNG Shipping issues

### Who Will Benefit?

The following oil & gas company personnel will benefit from the knowledge shared in this course:

- Legal counsels
- Lawyers
- Economists
- Executives
- Business development managers
- Commercial managers and business analysts
- Business development personnel
- Government officials & Policy regulators
- Business advisors/managers
- Asset managers/Administration managers

## DAY 1

- Introduction/course objectives
- LNG industry and business
- LNG market update
- Export plants and import terminals
- Fundamentals of LNG shipping
- Gas quality
- Process licensors
- LNG project implementation
- LNG operations
- Future of LNG/Gas

## DAY 2

- Overview of contractual and fiscal structures
- Political and legal risk
- Fiscal regimes
- Host government agreements
- Exploration and production sharing agreements (PSAs)
- World's notable fiscal regimes
- Government Gas & LNG policies

## DAY 3

- LNG sales and purchase agreement (SPA)
  - Key to LNG financing
  - Market considerations
  - Key characteristics
  - Purpose and structure
  - Off-spec LNG
  - Quality issues
  - Price review
  - Diversion restrictions
  - Spot sales

## DAY 4

- Joint operating agreements (JOA)
- Joint structures and agreements (JV)
- Preliminary agreements
- Gas sales agreements
- Development & production sharing agreement (DPSA)
- Exploration & production sharing agreements (EPSA)
- Gas sales agreement
- Development and fiscal agreement (DFA)
- Information memorandum
- Study & bid agreement

## DAY 5

- Engineering procurement and construction contract (EPC)
- Shipping & maritime contracts
- The terminal use agreement (TUA)
- General terms & conditions
- The commitment letter credit agreement
- Time charter party agreement
- Annual capacity charge
- Confidentiality agreement

**3**  
**Day** **Critical Negotiation Skills**  
Instructor(s): Dr. Emmanouil Ion

This 3-Day course in Negotiation is an extensive mind-provoking seminar. The seminar participants will gain familiarity with negotiation and be able to fully appreciate pre – negotiation preparation, the principled negotiation process, leadership and negotiation management in the bargaining table, how to overcome cultural barriers, how to monitor and assess their BATNA (Best Alternative to a Negotiated Agreement) and the BATNA of their counterparty, and how to close with a Win – Win result for all. Selected videos will be extensively used to facilitate participants observe, process and analyze the strengths, the weaknesses and the impact of various negotiation strategies and methodologies applied in simulated scenarios.

**What will this course cover?**

The objective of the course is to (a) enable participants to draft their own customized manual of Negotiation best practices and to facilitate them to make the difference in delivering Win – Win results at the workplace, (b) set out a conceptual framework for outlining the negotiation success, (c) grasp the Negotiation Challenges and (d) assemble all the components and negotiate more effectively and successfully.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to understand clearly:</p> <ul style="list-style-type: none"> <li>• Getting to Yes</li> <li>• Method of Principles Negotiation</li> <li>• Problem sharing</li> <li>• Avoid becoming adversarial</li> <li>• Assess &amp; align BATNAs</li> <li>• Evaluate interests &amp; options at stake</li> <li>• Lead effectively by following standards</li> <li>• Manage Your Negotiation Training</li> <li>• The guide to full engagement</li> <li>• Manage strategic forces</li> <li>• Identify Your “Good” Negotiation Coach</li> <li>• Drive negotiation through different cultures</li> <li>• Master cultural intelligence</li> <li>• Bridge cultural gaps</li> </ul>	<p>The following personnel will benefit from the knowledge and best practices shared in this course:</p> <ul style="list-style-type: none"> <li>• Project managers</li> <li>• Commercial managers</li> <li>• Product managers</li> <li>• Business advisors</li> <li>• Specialist consultants</li> <li>• Contracting managers</li> <li>• Procurement managers</li> <li>• Attorneys</li> <li>• Diplomats</li> <li>• Merger &amp; Acquisition managers</li> <li>• Asset managers</li> <li>• Arbitrators</li> <li>• Senior Management Executives</li> </ul>

DAY 1	DAY 2	DAY 3
<p><b>Classification of Natural Gas</b></p> <ul style="list-style-type: none"> <li>• Preparation for all aspects</li> <li>• Styles, techniques and skills of a Good Negotiator</li> <li>• Video 1: Bad examples - Why?</li> <li>• Video 2: Getting to Yes - How?</li> <li>• Data Mapping Domain</li> </ul> <p><b>Negotiation</b></p> <ul style="list-style-type: none"> <li>• Ury's Method of Principled Negotiation</li> <li>• Video 3: The Key: Problem Sharing, Not Adversarial</li> <li>• Video 4: Interests</li> <li>• Video 5: Options</li> <li>• Video 6: Standards</li> <li>• Group Exercise: Draft Your Manual of Best Practices for Win - Win Negotiation</li> </ul> <p><b>BATNA</b></p> <ul style="list-style-type: none"> <li>• What is BATNA?</li> <li>• Assessing Your BATNA</li> <li>• Alternatives</li> <li>• Evaluation of alternatives</li> <li>• Setting out Your reservation value</li> <li>• BATNA v. the current "deal"</li> <li>• The other party's BATNA</li> <li>• How to anticipate and assess your analysis</li> <li>• BATNA alignment</li> <li>• Leading bilateral and multilateral negotiations</li> </ul>	<p><b>Negotiation &amp; Leadership</b></p> <ul style="list-style-type: none"> <li>• Negotiation through different cultures</li> <li>• Stereotypes do come with surprises – Why?</li> <li>• Cultural intelligence</li> <li>• What if the goal is to deliver a long-term agreement?</li> <li>• Asset ownership: the key driver of irrational bargaining</li> <li>• How to do your research</li> <li>• Showing respect for cultural differences: A powerful tool</li> <li>• Think of how other perceive your style, Not how you perceive it</li> <li>• Bridging cultural gaps</li> <li>• Dignity cultures</li> <li>• Face cultures</li> <li>• Honor cultures</li> <li>• Is the bargaining table a “family” table?</li> <li>• How to use “Apology” as an effective tool and When</li> <li>• The Goal: to reseal in the table with dignity and respect</li> </ul> <p><b>Revision &amp; Group Exercise</b></p> <ul style="list-style-type: none"> <li>• Revision of BATNA</li> <li>• <b>Group Exercise:</b> Restructuring Your Manual of Best Practices for Win – Win results for all</li> </ul>	<p><b>The Four Pillars</b></p> <p><b>Pillar 1</b></p> <ul style="list-style-type: none"> <li>• How to manage Your Negotiation Training</li> <li>• You will make mistakes: Everybody does – but you can minimize errors</li> <li>• The key: Do not repeat mistakes – learn from them</li> <li>• How to become proactive</li> <li>• Taking an informed decision: Practice Your new skills</li> </ul> <p><b>Pillar 2</b></p> <ul style="list-style-type: none"> <li>• Full engagement</li> <li>• Understanding the added value of simulations</li> <li>• How simulations work</li> <li>• Four obstacles to learning</li> <li>• Resistance to learning</li> <li>• Misunderstanding the big picture</li> <li>• Absorbing new contexts</li> <li>• Fear of losing</li> </ul> <p><b>Pillar 3</b></p> <ul style="list-style-type: none"> <li>• Management of strategic forces</li> <li>• Promote &amp; enhance strategic alternatives</li> <li>• Competitive strengths and weaknesses</li> <li>• Re-evaluation of measures of success</li> <li>• Internal forces: Identify and manage them</li> <li>• Preparation process from within Your organization</li> <li>• Principal – Agent dynamics</li> <li>• Budgeting of Your Organization</li> </ul> <p><b>Pillar 4</b></p> <ul style="list-style-type: none"> <li>• How to identify Your “Good” Negotiation Coach</li> <li>• Why a “Good” Negotiation Coach is needed?</li> <li>• What are the qualitative characteristics of a “Good” Negotiation Coach?</li> </ul> <p><b>Q&amp;A Session</b></p>

## **5** **International Oil & Gas Accounting & Financial Analysis**

**Day** Instructor(s): Pateel Papazian, CPA

The 5-day program is designed to investigate the accounting and financial aspects of international oil and gas operations. It provides a working knowledge of key oil and gas accounting issues, techniques, practices and terminology. Furthermore, it reviews the financial concepts of petroleum operations.

The Program allows the participants to make better accounting and financial decisions. Practical problems will be provided for participants to solve each day of the course in order to reinforce the theoretical concepts. Solutions for the problems should be provided so the participants can refer to after the course.

### **PARTICIPANTS**

Participants would include mid-and senior level managers in national and international oil and gas companies involved in accounting, finance, auditing , budgeting and planning functions in addition to non-financial managers who are interested in understanding the fundamentals of oil and gas accounting and finance.

### **CONTENTS**

- Accounting for International Operations
- Contracts, Accounting and Legal Arrangements Encountered in International Operations
- Financial Accounting Issues in the Exploration Stage
- Accounting Issues in the Drilling& Development Stage
- Accounting Issues in the Production Stage
- The Full Cost Method of Accounting
- Impairment
- Accounting for Asset Retirement Obligation
- Accounting for Imbalance
- The Use of Reserve Data in Financial Accounting
- Supplemental Disclosure
- Accounting for Oil/Gas Conveyances
- Contracts, Accounting and Legal Documents in International Contracts
- The PSC Accounting Procedures
- Application of Cost Allocation Principles in International Joint Venture Accounting
- Budgeting, Cash Calls & Cash Settlement Statement
- Accounting for Materials
- Analysis of Production Sharing Contracts (PSC)
- Financial Management, Planning and Analysis

**5**  
**Day** **Finance for the Non-Financial Professionals**  
Instructor(s): Pateel Papazian, CPA or M. A. Mian

This 5-day course teaches you the basics of finance in layman terms. Your financial decisions are important for the commercial performance of your business line, department and overall organization. The overall financial health of any organization depends on how individual business lines or departments within the organization optimizes their financial performance.

At the end of the course you shall be able to evaluate the financial health of your organization and be able to make valuable suggestions for improvement. The course emphasizes on gaining basic understanding of finance and accounting concepts to drive your organization's growth. Each day the attendees will analyze published company financial reports and assess their financial health and how to improve it. Specific topics include: financial analysis; planning, forecasting, and budgeting; cash flow, and strategic financing.

**What will this course cover?**

The course uses a combination of instruction, group discussions and practical examples and exercises to ensure delegates absorb both the theory and the practical application of the topics.

What will you learn	Who will benefit?
<p>Upon completing this course, you will be able to:</p> <ul style="list-style-type: none"> <li>• Explain the importance of finance and interpretation of financial information</li> <li>• Apply the concepts of accounting and finance to analyze financial statements</li> <li>• Learn about key accounting and finance terms</li> <li>• Examine financial statements by using key ratios</li> <li>• Explain the importance of budgeting process</li> <li>• Learn about key components needed to improve profitability</li> </ul>	<p>This course is aimed at non-financial personnel at all levels and in all disciplines in the oil and gas industry who want to develop a better understanding of finance, accounting and budgeting.</p> <ul style="list-style-type: none"> <li>• Managers and supervisors wanting to improve their understanding of financial reports and make more effective use of financial information for strategic and operational decision-making</li> <li>• Specialists in all disciplines who have to interpret and work with financial information</li> <li>• All personnel with budget responsibilities</li> <li>• Advisers who make recommendations based on financial data</li> <li>• Geoscientists responsible for budgeting and planning</li> </ul>

DAY 1	DAY 2	DAY 3	DAY 4	DAY 5
<p><b>Oil &amp; Gas Activities</b></p> <ul style="list-style-type: none"> <li>• Exploration</li> <li>• Appraisal</li> <li>• Delineation</li> <li>• Development</li> <li>• Primary recovery</li> <li>• Secondary recovery</li> <li>• Enhanced oil recovery</li> </ul> <p><b>Introduction to Financial Management</b></p> <ul style="list-style-type: none"> <li>• Goals of financial management</li> <li>• Corporate strategy and financial strategy</li> <li>• Role of finance function</li> <li>• Objectives of business enterprise</li> <li>• Wealth or profit maximization</li> <li>• Management ethics</li> <li>• Shareholder objectives and agency problem</li> <li>• Risk and return relationship</li> </ul> <p><b>Foundations of Finance and Accounting</b></p> <ul style="list-style-type: none"> <li>• Introduction</li> <li>• The Building Blocks of Accounting</li> <li>• Overview of the Finance Principles</li> <li>• The Four Financial Statements</li> <li>• The Practice of Accounting</li> </ul> <p><b>Problems/Exercises</b></p>	<p><b>Understanding Financial Information</b></p> <ul style="list-style-type: none"> <li>• Understanding basic principles</li> <li>• The profit and loss account</li> <li>• The balance sheet</li> <li>• The importance of working capital and how to control it</li> <li>• The difference between capital expenditure and operating expenditure</li> </ul> <p><b>Budget Preparation and Control</b></p> <ul style="list-style-type: none"> <li>• The role of financial planning</li> <li>• How to prepare a budget</li> <li>• How to control a budget</li> </ul> <p><b>Sources &amp; # Reservoir Engineering

**3**  
**Day** **Decline Curve Analysis & Diagnostic Methods for Performance Forecasting**  
Instructor(s): M. A. Mian or Sikandar Gilani

This 3-Day course is developed to address three main issues. It is designed to show the different forecasting tools used to forecast oil and gas reserves. Accurate forecast is mandatory for production operations, facilities design, well design and configuration and economic evaluation of oil and gas investments. The course involves extensive problem sessions in which the participants gain hands-on experience with forecasting real life production data using various methods. The limitations of the methods are presented to make sure that the participants pick the correct method to use in their respective situation. Time is also dedicated to generating probabilistic production forecasts (P10, P50 & P90) and building Excel models to forecast production.

The course also shows tools that can be used to diagnose reservoir problems. Well test analysis results are typically used to identify any reservoir anomalies such as faults, distance to fault, dual porosity system, wellbore storage and so on. Performance forecasting methods such as PI, IPR are also used.

**What will this course cover?**

Decline curve analysis in conventional and unconventional reservoirs. How decline curves and well test data can be used to diagnose reservoir anomalies. How we predict the performance of the reservoirs.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the following:</p> <ul style="list-style-type: none"> <li>• Why performance forecasting</li> <li>• What Forecasting Techniques are Used</li> <li>• Provide in-depth use of forecasting tools</li> <li>• Limitation of these forecasting tools</li> <li>• Forecasting methods of special interest in unconventional reservoirs</li> <li>• Pressure/pressure derivative diagnostic plots</li> <li>• Water control diagnostic plots</li> <li>• Reserves definitions</li> <li>• Requirements for reserves by U.S. SEC regulations</li> <li>• Criteria for SEC reserves categories</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Reservoir Engineers</li> <li>• Production engineers</li> <li>• Petrophysicists</li> <li>• Geoscientists</li> <li>• Economists and planners</li> <li>• Facilities planning engineers</li> <li>• Bankers &amp; Stock Brokers</li> <li>• Legal personnel</li> <li>• Mid-level management</li> </ul>

DAY 1	DAY 2	DAY 3
<p><b>The Global Energy Marketplace</b></p> <ul style="list-style-type: none"> <li>• Oil and gas regions</li> <li>• World's oil reserves situation</li> <li>• World's gas reserves situation</li> <li>• World's crude oil production</li> <li>• World's gas production</li> <li>• Global energy mix</li> <li>• Global crude oil consumption</li> <li>• Global natural gas consumption</li> <li>• Middle east oil consumption</li> <li>• Key performance indicators (KPIs)</li> <li>• Reserves replacement ratio</li> <li>• Global oil reserves life index</li> <li>• Global gas reserves life index</li> <li>• Problem #1 - Global Reserves Life Index</li> <li>• Historical crude oil price</li> </ul> <p><b>Petroleum Resources Management System (PRMS)</b></p> <ul style="list-style-type: none"> <li>• What is PRMS</li> <li>• The stakeholders</li> <li>• Scope of projects</li> <li>• MRPS - major principles</li> <li>• Resources classification framework</li> <li>• Establishing PRMS total discovered petroleum initially in place</li> <li>• Establishing PRMS contingent resources &amp; **3**  
**Day** **Petroleum Resource Management System (PRMS)**  
Instructor(s): M. A. Mian or Sikandar Gilani

Reporting accurate assessment of quantities of hydrocarbons that exist in the subsurface and can be economically recovered is one of the most important annual tasks of the oil and gas E&P companies. The task involves effort from multi-disciplinary professionals who utilize a series of interpretations on technical and commercial issues.

Public E&P companies are required to annually file estimates of their holdings with government regulatory agencies, such as Securities & Exchange Commission (SEC). The same estimates are also presented in the companies' annual reports for the stockholders, lenders and investors. Estimation of reserves and resources involve many technical assumptions. Therefore, it is important that consistent assumptions are used by the professionals to arrive at these assessments. Use of consistent assumptions and methodology will enable the regulatory agencies, lenders and investors make apple-to-apple comparison of the numbers reported by various E&P companies. In 2011, the Society of Petroleum Engineers (SPE) released new guidelines to address this need.

The PRMS is designed to provide consistency in estimating naturally occurring petroleum quantities, evaluating projects to commercially extract and market the derived products, and present results within a comprehensive classification framework. It provides standardized definitions of petroleum resources and how they are estimated.

**What will this course cover?**

The objective of this 3-Day course is to familiarize the petroleum engineers, geologists, geophysicists and other personnel dealing with E&P companies' annual disclosures with the PRMS. Provide detailed practical examples to reinforce the definitions presented in the PRMS. This course will introduce the guidelines in a consistent, easy to interpret and cohesive manner to make sure all the professionals involved are fully familiar with the PRMS.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the following:</p> <ul style="list-style-type: none"> <li>• Learn the standardized definitions of petroleum resources and how they are estimated</li> <li>• Techniques to enhance management of your company's total hydrocarbon resource portfolio</li> <li>• Provide consistency in estimating naturally occurring petroleum quantities</li> <li>• Evaluate projects to commercially extract and market the derived products</li> <li>• Present your company's reserves and resources within a comprehensive classification framework.</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Reservoir Engineers</li> <li>• Geologists</li> <li>• Petrophysicists</li> <li>• Geophysicists</li> <li>• Economists and planners</li> <li>• Supervisors and management responsible for the reserves reporting</li> <li>• Government regulators</li> <li>• Bankers &amp; Stock Brokers</li> </ul>

## 4 Reservoir Engineering - Intermediate Level

**Day** Instructor(s): Dr. Djebbar Tiab, M. A. Mian or Sikandar Gilani

Reservoir engineering is the petroleum engineering discipline that is concerned with the recovery of hydrocarbons from subsurface hydrocarbon-bearing rock formations (reservoirs). Reservoir engineering is the backbone of the exploration and production activity. Without knowing the amount of oil and/or gas we have in the reservoirs, how much of it can be produced and how the reservoirs will perform (exponential decline or hyperbolic decline etc.), it will not be possible to develop the oil and gas discoveries.

The objective of this 4-Day course is to bring together the fundamentals of oil & gas reservoir engineering in a coherent and systematic manner. It is intended for both students who are new to the subject and practitioners as a refresher. The course is organized into 12 main sections and each section includes several worked exercises. The exercises form an integral part of the course. The objective of the exercises is to illustrate the application of the theoretical concepts to real life problems encountered by the reservoir engineers.

The course presents reservoir engineering aspects of both conventional and unconventional gas reservoirs.

### What will this course cover?

At the end of the course participants will be able to understand the physics of oil and gas reservoirs and apply reservoir engineering methods and appreciate the construction and use of reservoir models. They will have acquired the skills necessary for estimation of petroleum reserves, development planning and to assess uncertainties. Practical experience will be obtained in integrated field development work by addressing pertinent problems in study teams. An Excel spreadsheet (PEPAC) is provided to each participant that can be used for all reservoir engineering calculations.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the following:</p> <ul style="list-style-type: none"> <li>• Oil &amp; Gas properties using PVT analysis and empirical correlations</li> <li>• Oil &amp; Gas reserves calculations (pore volume calculations, recovery factor and material balance calculations)</li> <li>• Forecasting oil &amp; gas production, in conventional and unconventional reservoirs, using decline curve analysis</li> <li>• Well deliverability calculations</li> <li>• Design and interpretation of oil &amp; gas well production tests</li> <li>• Economics of oil &amp; gas field development</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Reservoir Engineers</li> <li>• Production Engineers</li> <li>• Petroleum Geologists</li> <li>• Petrophysicists</li> <li>• Geophysicists</li> <li>• Economists and planners</li> <li>• Supervisors and management responsible for reserves reporting &amp; reservoir management</li> <li>• Government regulators</li> <li>• Bankers &amp; Stock Brokers</li> </ul>

**5 Day Gas Reservoir Engineering – Intermediate Level**  
**Instructor(s): Dr. Djebbar, M. A. Mian or Sikandar Gilani**

Reservoir engineering is the petroleum engineering discipline that is concerned with the recovery of hydrocarbons from subsurface hydrocarbon-bearing rock formations (reservoirs). Gas reservoir engineering is the branch of reservoir engineering that deals exclusively with reservoirs of non-associated gas. It is expected that in the decades to come natural gas will gain prominence among the world’s energy resources.

The objective of this 5-Day course is to bring together the fundamentals of gas reservoir engineering in a coherent and systematic manner. It is intended for both students who are new to the subject and practitioners as a refresher. The course is organized into 12 main sections and each section includes several worked exercises. The exercises form an integral part of the course. The objective of the exercises is to illustrate the application of the theoretical concepts to real life problems encountered by the reservoir engineers. Very comprehensive spreadsheets accompany the course material, these spreadsheets can be used to help in solving various types of reservoir engineering problems.

The course presents reservoir engineering aspects of both conventional and unconventional gas reservoirs.

**What will this course cover?**

This course will cover (a) gas properties and analyzing PVT data, (b) gas reserves calculations, (c) forecasting gas production and associated products, (d) gas well test analysis, (e) gas well deliverability calculations, (f) forecasting production of unconventional gas reservoirs, and (g) economics of gas field development. An Excel spreadsheet (PEPAC) is provided to each participant that can be used for all the gas reservoir calculations.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the following:</p> <ul style="list-style-type: none"> <li>• Gas properties using PVT analysis and empirical correlations</li> <li>• Calculation of NGLs from PVT data</li> <li>• Gas reserves calculations (pore volume calculations, recovery factor and material balance calculations)</li> <li>• Forecasting gas production, in conventional and unconventional reservoirs, using decline curve analysis</li> <li>• Gas well deliverability calculations</li> <li>• Design and interpretation of gas well production tests</li> <li>• Economics of gas field development</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Reservoir Engineers</li> <li>• Production Engineers</li> <li>• Petroleum Geologists</li> <li>• Petrophysicists</li> <li>• Geophysicists</li> <li>• Economists and planners</li> <li>• Supervisors and management responsible for reserves reporting &amp; reservoir management</li> <li>• Government regulators</li> <li>• Bankers &amp; Stock Brokers</li> </ul>

# Drilling Engineering

**3**  
**Day** **Offshore & Deep Water Drilling**  
Instructor: Dr. Qamar J. Sharif

This 3-Day course provides comprehensive, hands-on workshop on the fundamentals of offshore drilling. If you're new to offshore drilling, and looking for a comprehensive overview of how it all really works, the brand-new 3 Day MBA in Offshore Drilling is designed with you in mind.

This hands-on training course will walk you through offshore drilling operations, technology and costs, as well as taking you through issues such as health and safety and environmental concerns.

**What will this course cover?**

Difference between onshore and offshore drilling, drilling cost analysis, components of drilling rig, reasons for directional drilling, tools used for directional drilling, how to optimize parameters (such as bit selection, mud design, casing design and so on), HSE and logistics requirements during offshore drilling.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the following:</p> <ul style="list-style-type: none"> <li>• Get to grips with the fundamentals of offshore drilling and find out how it differs from land drilling</li> <li>• Learn all you need to know about the drilling rig, basic well design, drilling bits, routine drilling operations, and much more</li> <li>• Find out how to carry out a drilling cost analysis</li> <li>• Discover how to estimate drilling costs, calculate the daily rig rate, and account for variable costs</li> <li>• Consider the reasons for directional drilling, as well as looking at the tools and measurements involved</li> <li>• Find out how to select and evaluate a drilling bit, as well as optimizing your drilling hydraulics</li> <li>• Learn all about the role of weather conditions, supply vessels and sea port facilities</li> <li>• Explore health, safety and security in the offshore drilling environment</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Drilling engineers</li> <li>• Drilling superintendents and foremen</li> <li>• Reservoir Engineers</li> <li>• Petrophysicists</li> <li>• Geoscientists</li> <li>• Economists and planners</li> <li>• Facilities planning engineers</li> <li>• Accountants</li> <li>• Mid-level management</li> </ul>

DAY 1	DAY 2	DAY 3
<p><b>Big Picture of the Oil &amp; Gas Industry</b></p> <ul style="list-style-type: none"> <li>• Meaning of petroleum</li> <li>• Typical oil and gas company objectives</li> <li>• Industry streams</li> <li>• World reserves and production</li> <li>• Peak oil</li> <li>• Production management</li> <li>• Quotas and capacities (OPEC/Non-OPEC)</li> <li>• Market distribution and dynamics</li> <li>• Role of IOCs, NOCs and regulatory bodies</li> <li>• Glossary of terms</li> </ul> <p><b>Fundamentals of Drilling</b></p> <ul style="list-style-type: none"> <li>• The drilling rig: types and components</li> <li>• The drilling team</li> <li>• Drilling fluids (mud) and circulating system</li> <li>• Basic well design</li> <li>• Drilling bits</li> <li>• Directional and horizontal drilling</li> <li>• Routine drilling operations</li> <li>• Well monitoring</li> <li>• Well control</li> <li>• Wellbore problems and preventions</li> <li>• Special drilling operations (coring, fishing, etc.)</li> </ul> <p><b>Case Studies:</b> Mud weight window, rig horse-power and drilling depth</p> <p><b>Offshore Drilling</b></p> <ul style="list-style-type: none"> <li>• Differences between land and offshore</li> <li>• Water depth and rig types (deep water MODUs – Mobile Offshore Drilling Units)</li> <li>• Sea bed preparation</li> <li>• Fixed platform</li> <li>• Floating drilling and station keeping</li> <li>• Motion compensation</li> <li>• Conductor casing (jetting/riserless drilling)</li> <li>• Subsea BOP stack</li> <li>• Marine/production riser for various deep water applications</li> <li>• Slip joint</li> <li>• Rotating head &amp; ROVs</li> </ul>	<p><b>Drilling Cost Analysis</b></p> <ul style="list-style-type: none"> <li>• Drilling cost estimation</li> <li>• Authorisation for Expenditure (AFE)</li> <li>• Daily rig rate</li> <li>• Fixed operating costs</li> <li>• Variable costs</li> <li>• Drilling contingencies</li> <li>• Non-productive time</li> <li>• Drilling performance and optimization</li> </ul> <p><b>Case Studies:</b> Cost per foot, bit performance</p> <p><b>Directional/Horizontal Drilling</b></p> <ul style="list-style-type: none"> <li>• Reasons for directional drilling</li> <li>• Definitions</li> <li>• Directional tools</li> <li>• Well trajectories</li> <li>• Directional drilling measurements</li> <li>• Hole cleaning</li> <li>• Extended reach wells (case study)</li> </ul> <p><b>Drilling Bits</b></p> <ul style="list-style-type: none"> <li>• Types of bits</li> <li>• Rock failure mechanisms</li> <li>• Bit selection and evaluation</li> <li>• Factors affecting rate of penetration</li> </ul> <p><b>Drilling Hydraulics</b></p> <ul style="list-style-type: none"> <li>• Hydrostatic pressure</li> <li>• Buoyancy</li> <li>• Rheological models</li> <li>• Bit nozzle size selection</li> <li>• Drilling hydraulic optimization</li> <li>• Hole cleaning/cutting transport</li> </ul>	<p><b>Drilling Fluids (Mud)</b></p> <ul style="list-style-type: none"> <li>• Functions of drilling fluids</li> <li>• Mud properties</li> <li>• Water-based muds</li> <li>• Oil-based muds</li> </ul> <p><b>Logistic Support and Services</b></p> <ul style="list-style-type: none"> <li>• Weather conditions</li> <li>• Supply vessels</li> <li>• Helicopter</li> <li>• Land base</li> <li>• Sea port facility</li> </ul> <p><b>Health, Safety, Environment and Security</b></p> <ul style="list-style-type: none"> <li>• Health, safety, environment and security</li> <li>• Elements of drilling/production safety and regulations</li> <li>• Think of unthinkable (scenario planning)</li> <li>• Minimal operational requirements</li> <li>• Learning from disasters</li> <li>• Oil spill prevention and response</li> <li>• First responders and emergency equipment</li> </ul> <p><b>U-Turn:</b> work through your own problems and walk away with real solutions to your workplace challenges!</p> <p><b>Well Completion and Production</b></p> <ul style="list-style-type: none"> <li>• Near wellbore formation damage</li> <li>• Evaluating a well, logging, MWD and LWD</li> <li>• Types of completions</li> <li>• Perforating a well</li> <li>• Well testing</li> <li>• Reservoir stimulation</li> <li>• Completion equipment, concepts and techniques</li> <li>• Multizone completions</li> <li>• Artificial lift technique</li> <li>• Workover operations</li> <li>• DW field development costs</li> <li>• FPSO/subsea schemes instead of floating platforms</li> </ul> <p><b>Case Studies</b></p> <p><b>Course Summary and Wrap-Up</b></p>

**3**  
**Day** **Drilling for Non-Drilling Personnel**  
Instructor: Dr. Qamar J. Sharif

This 3-Day course provides a comprehensive overview of the fundamentals of oil and gas drilling engineering concepts and day-to-day operations. It elaborates on drilling terminologies commonly used in drilling operations, rig equipment and their functions. If you're new to drilling and looking for a comprehensive overview of how it all really works. This brand-new “3 Days: Drilling for Non-Drilling Personnel” course is designed with you in mind.

This hands-on training course will walk you through drilling operations, technology and costs and what it takes to plan and drill a well, as well as the logistics and roles of various service companies involved in the process. At the end of the course, you will be literate in oil and gas and be able to read and understand a daily drilling report!

**What will this course cover?**

Fundamentals of drilling operations; the drilling rig equipment and their functions; drilling terminologies; drilling processes; planning of drilling operations; logistics, role and responsibilities of service companies including drilling contractor; the functions of drilling fluid, casing, cementing and components of a drill string; the different types of drilling contracts and the types of wells; and, HSE and resources requirements during drilling.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the following:</p> <ul style="list-style-type: none"> <li>• Understand the concepts and terminology</li> <li>• How oil and gas is formed in the earth and basic geology</li> <li>• Get to grips with the fundamentals of drilling</li> <li>• Learn all you need to know about the drilling rig, basic well design, drilling bits, and routine drilling operations</li> <li>• How to calculate a drilling cost analysis</li> <li>• Discover how to estimate drilling costs, calculate the daily rig rate, and account for variable costs</li> <li>• Explore health, safety and security in the drilling environment</li> </ul>	<p>The following oil and gas company personnel will benefit from the knowledge shared in this course:</p> <ul style="list-style-type: none"> <li>• Reservoir Engineers</li> <li>• Petrophysicists</li> <li>• Geoscientists</li> <li>• Economists and planners</li> <li>• Facilities planning engineers</li> <li>• Accountants</li> <li>• Mid-level management</li> <li>• Service Companies</li> <li>• Logistics</li> <li>• Procurement</li> <li>• IT, HR and HSE personnel</li> <li>• Secretaries and support staff</li> </ul>

DAY 1	DAY 2	DAY 3
<p><b>Introduction to Oil &amp; Gas Industry</b></p> <ul style="list-style-type: none"> <li>• Oil and Gas Development</li> <li>• Formations, rock pressure, and hydrocarbon traps</li> <li>• Petroleum reservoirs</li> <li>• Exploration processes</li> </ul> <p><b>Introduction to Drilling</b></p> <ul style="list-style-type: none"> <li>• Definitions and terminologies</li> <li>• Drilling rig team</li> <li>• Oil company structure</li> <li>• Drilling contractor responsibilities</li> <li>• Drilling service companies responsibilities</li> <li>• Drilling rig types</li> <li>• Land rigs</li> <li>• Offshore rigs</li> </ul> <p><b>Drilling Rig Components</b></p> <ul style="list-style-type: none"> <li>• Drilling rig components and functions</li> <li>• Rig power system</li> <li>• Hoisting system</li> <li>• Circulating system</li> <li>• Rotating system</li> <li>• Drilling data recording system</li> <li>• Well control system</li> </ul> <p><b>Well Planning and Design</b></p> <ul style="list-style-type: none"> <li>• Well planning and design process</li> <li>• Data inputs</li> <li>• Long lead time items and procurement</li> <li>• Offset wells reviews</li> <li>• Well Cost Estimate (AFE)</li> <li>• Drilling fluids design</li> <li>• Well trajectories</li> <li>• Directional drilling</li> </ul>	<p><b>Drilling Bits</b></p> <ul style="list-style-type: none"> <li>• Types of bits</li> <li>• Classification of bits</li> <li>• Rock failure mechanisms</li> <li>• Bit records</li> <li>• Components of drill string</li> </ul> <p><b>Drilling Operations and Hole Cleaning</b></p> <ul style="list-style-type: none"> <li>• Well drilling activities</li> <li>• Drilling parameters</li> <li>• Drilled cuttings handling</li> <li>• Drilling fluids (mud)</li> <li>• Typical drilling problems and lost time</li> </ul> <p><b>Functions of Drilling Fluids</b></p> <ul style="list-style-type: none"> <li>• Mud properties</li> <li>• Water-based muds</li> <li>• Oil-based muds</li> <li>• Hydrostatic pressure</li> <li>• Buoyancy</li> <li>• Rheological models</li> </ul> <p><b>Casing and Cementing</b></p> <ul style="list-style-type: none"> <li>• Functions of casing and cementing</li> <li>• Properties of cement</li> <li>• Single stage and multi-stage cementing</li> </ul> <p><b>Blowout Prevention System</b></p> <ul style="list-style-type: none"> <li>• Well control</li> <li>• Kick and its causes</li> <li>• Prevention of kicks</li> <li>• Well Shut-in</li> <li>• Well kill operations</li> </ul>	<p><b>Logistic Support and Services</b></p> <ul style="list-style-type: none"> <li>• Rig location and access to services</li> <li>• Weather conditions</li> <li>• Supply vessels</li> <li>• Helicopters</li> <li>• Land base</li> <li>• Sea port facility</li> </ul> <p><b>Health, Safety, Environment and Security</b></p> <ul style="list-style-type: none"> <li>• People and safety</li> <li>• Personal Protective Equipment (PPE)</li> <li>• Drilling operations and equipment safety</li> <li>• Slip and trip</li> <li>• Fall protection</li> <li>• Hazardous Energy</li> <li>• Chemical Hazards</li> <li>• Fire Safety</li> <li>• Hydrogen sulfide safety</li> <li>• Oil spill prevention and response</li> <li>• First Aid</li> </ul> <p><b>Well Completion</b></p> <ul style="list-style-type: none"> <li>• Types of completions</li> <li>• Perforating a well</li> <li>• Well testing</li> <li>• Completion equipment, concepts and techniques</li> <li>• Multizone completions</li> <li>• Artificial lift technique</li> <li>• Workover operations</li> <li>• Wireline pressure control equipment and Christmas tree</li> </ul>

## 3 Stuck Pipe Prevention

Day Instructor: Dr. Qamar J. Sharif

This 3-Day course is designed with the simple phrase in mind: “Prevention is Better than Cure”. The course provides a comprehensive understanding of three stuck pipe mechanisms, causes leading to each mechanism, and recognition of warning signs. Participants will learn how to perform the trend analysis and learn to “listen to the well” by understanding the “language of the well.”

The course includes a stuck pipe mechanism identification table and recommends the first actions for each mechanism. Stuck pipe case histories are included to enhance the learning. The course also covers knowledge of the formations and borehole instability problems and recommends guidelines to empower the driller on best tripping practices. We recommended that the course is taken by the rig team together, as a team building exercise as well as an opportunity to improve communication skills.

This operations-oriented training emphasizes a proactive approach to stuck pipe prevention. It teaches how to “listen to the well” and perform trend analysis. The course also focuses on how to detect the causes leading to stuck pipe at an early stage and what preventive actions to take before full sticking occurs.

### What will this course cover?

The course emphasizes the importance of recognizing the signs at an early stage and taking PREVENTIVE actions before the sticking takes place. It is designed to increase the knowledge and competency of the drilling crews. It empowers the drilling crew to perform correct diagnosis, improve communication, and take the correct “First Actions” to prevent stuck pipe incidents. Studies have shown that about 90% of stuck pipe incidents can be freed with appropriate “First Actions” within the first 4 hours of sticking. The course also includes the effective use of drilling jars and understanding of pump open force.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand how to:</p> <ul style="list-style-type: none"> <li>• Identify the three sticking mechanisms and their causes</li> <li>• Recognize the sticking causes at an early stage and what preventive actions to take before full sticking develops</li> <li>• Understand the fundamentals of hole cleaning</li> <li>• Discover techniques of stuck pipe prevention</li> <li>• Learn to “listen to the well”</li> <li>• Perform trend analysis of drilling parameters</li> <li>• Read a stratigraphic column with identification of potential problem formations</li> <li>• Review case histories with in-depth analysis.</li> <li>• Understand the workings of drilling jars, pump open force, and jarring load calculations</li> <li>• Appreciate the team approach and the need for good communication</li> <li>• Identify the sticking mechanism and what “First Actions” to take to free a stuck pipe</li> </ul>	<p>The following oil and gas company personnel will benefit from the knowledge shared in this course:</p> <ul style="list-style-type: none"> <li>• Drilling crews</li> <li>• Rig Managers</li> <li>• Drilling Foreman</li> <li>• Drilling engineers</li> <li>• Mud engineers</li> <li>• Wellsite geologists</li> <li>• Directional drillers</li> <li>• Drilling contractors staff</li> </ul>

DAY 1	DAY 2	DAY 3

**3**  
**Day** **Drilling Hydraulics Design**  
Instructor: Dr. Qamar J. Sharif

This 3-Day course is designed for drilling operational staff and drilling engineers. The objective of the course is to determine subsurface wellbore pressures during drilling operations under static and dynamic conditions. It starts with a calculation of hydrostatic pressure using high school mathematical equations and physical laws governing fluid dynamics. After refreshing basic concepts, the course explores how to calculate the forces and stresses in submerged tubular, the density of drilling fluids required to drill safely and efficiently, various rheological models for calculating frictional pressure losses in tubular and in annulus, the surge and swab pressures while moving the drill string, optimizing drilling rates according to the design and size of the bit nozzle and the annular velocity for efficient cutting removal from the wellbore.

**What will this course cover?**

This course covers the conversion between English and metric units, with an emphasis on commonly used units in the oil and gas field operations; properties of drilling fluids; properties of gases and ideal gas law; calculation of hydrostatic pressure of liquid and gas columns; buoyancy factor; axial stresses in tubular; forces balance and free body diagram; identification of a kick and well control; estimation of formation pore pressure and fracture gradients; loss circulation; fluid flow calculations; hydraulic horse power; rheological models; flow regimes; Reynolds’s number; bit hydraulics and optimum bit nozzle sizes; and hole cleaning in vertical, directional and horizontal wells.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the following:</p> <ul style="list-style-type: none"> <li>• Drilling fluid properties and hydraulic design</li> <li>• Axial stresses</li> <li>• Well control</li> <li>• Estimate of pore pressure</li> <li>• Prediction of fracture gradient</li> <li>• Fundamental laws of fluid flow</li> <li>• Rheological models</li> <li>• Hole cleaning in vertical and horizontal wells</li> <li>• Optimal bit nozzle sizes</li> <li>• Surge and swab pressures</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course:</p> <ul style="list-style-type: none"> <li>• Drilling crews</li> <li>• Rig managers</li> <li>• Drilling foremen</li> <li>• Drilling engineers</li> <li>• Mud engineers</li> <li>• Wellsite geologists</li> <li>• Directional drillers</li> <li>• Drilling contractors staff</li> </ul>

DAY 1	DAY 2	DAY 3
<p><b>Introduction to Oil &amp; Gas Drilling</b></p> <ul style="list-style-type: none"> <li>• Oil and gas development</li> <li>• Formations, rock pressure, fluid traps</li> <li>• Fundamentals of petroleum</li> <li>• Basic geology</li> <li>• Drilling hydraulics</li> </ul> <p><b>Drilling fluid properties</b></p> <ul style="list-style-type: none"> <li>• Density</li> <li>• Compressibility of fluids</li> <li>• properties of gases</li> <li>• Z-Factor</li> <li>• Hydrostatic pressure</li> <li>• Annular pressure in complex fluid columns</li> </ul> <p><b>Fluid Mechanics</b></p> <ul style="list-style-type: none"> <li>• Free body diagram</li> <li>• Buoyancy</li> <li>• Forces and stresses in submerged tubular</li> </ul> <p><b>Well Control</b></p> <ul style="list-style-type: none"> <li>• Identification of a kick</li> <li>• Shut-in pressures</li> <li>• Kill mud weight calculations</li> <li>• Annular pressure during well control</li> <li>• Strength of casing shoe and maximum allowable annular pressure</li> <li>• Exercise</li> </ul>	<p><b>Formation Pressure</b></p> <ul style="list-style-type: none"> <li>• Pre-pressure development</li> <li>• Porosity and permeability</li> <li>• Pore pressure measurements</li> <li>• Fluid pressure gradient and mud weight requirements</li> <li>• Fluid level in annulus after loss circulation</li> <li>• Exercises</li> </ul> <p><b>Prediction of Fracture Gradient</b></p> <ul style="list-style-type: none"> <li>• Definition</li> <li>• Estimate fracture gradient from correlations</li> <li>• Measurement of fracture gradient – Leak of Test (LOT)</li> <li>• LOT data Analysis</li> <li>• Exercises</li> </ul> <p><b>Basic Laws of Fluid Flow</b></p> <ul style="list-style-type: none"> <li>• Introduction</li> <li>• Conservation of mass</li> <li>• Velocity equation</li> <li>• Energy and pressure balance equations</li> <li>• Hydraulic calculations</li> <li>• Pressure drop through bit nozzles</li> </ul> <p><b>Rheological Models</b></p> <ul style="list-style-type: none"> <li>• Introduction</li> <li>• Calculation of frictional pressure losses</li> <li>• Newtonian model</li> <li>• Bingham Plastic model</li> <li>• Power-Law model</li> <li>• Flow regimes, laminar and turbulent</li> <li>• Frictional pressure loss equations</li> <li>• Exercises</li> </ul>	<p><b>Bit Hydraulics</b></p> <ul style="list-style-type: none"> <li>• Introduction</li> <li>• Bit nozzle size design</li> <li>• Optimization of bit hydraulics</li> <li>• Bit hydraulic horsepower</li> <li>• Jet impact force</li> <li>• Exercise</li> </ul> <p><b>Hole Cleaning in Vertical Wells</b></p> <ul style="list-style-type: none"> <li>• Introduction</li> <li>• Particle slip velocity</li> <li>• Cutting transport ratio</li> <li>• Factors affecting hole cleaning</li> <li>• Empirical correlations</li> <li>• Exercise</li> </ul> <p><b>Hole Cleaning in Directional Wells</b></p> <ul style="list-style-type: none"> <li>• Same rules don't apply</li> <li>• Cutting transport in directional wells</li> <li>• Difficulties in hole cleaning at different angles</li> <li>• Factors affecting hole cleaning in directional wells</li> <li>• Flow rate requirements for hole cleaning in different hole conditions</li> <li>• Exercises</li> </ul> <p><b>Swab and Surge</b></p> <ul style="list-style-type: none"> <li>• Definitions</li> <li>• Burkhardt method</li> <li>• Mitchell method</li> <li>• Recommended speeds for running in hole and pulling out of hole</li> <li>• Exercises</li> </ul>

# Production Engineering

**3** **Oil & Gas Production Management**  
**Day** Instructor: Dr. Qamar J. Sharif

The 3-Day course in Oil & Gas Production Management is an introductory-level training course designed to bridge knowledge gaps. It is most useful to those who are new to oil and gas production, senior managers needing a big picture refresher and professional advisors and suppliers to the industry.

The course is useful to those who work on the technical side, such as geologists and engineers, who need to hone their commercial or economic skills, as well as those who provide a service to or invest in the industry.

**What will this course cover?**

The course covers a wide range of topics related to production management. The topics covered include essentials of the industry, production chemistry and technology, production engineering, completion practices and well interventions, production facilities, production supply planning and scheduling, storage/transportation & marketing, environment concerns in petroleum production, economics of production management, human resources management and disaster/contingency planning.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the following:</p> <ul style="list-style-type: none"> <li>• Gain a thorough understanding of oil and gas production management</li> <li>• Understand the technology, facilities and chemistry involved, as well as production operations and logistics.</li> <li>• Look at the different elements of production technology, the units and conversions involved and reservoir production concepts.</li> <li>• Learn about storage, transportation and marketing</li> <li>• Understand the environmental considerations</li> <li>• Gain an understanding of the economics of production management</li> <li>• Understand disaster and contingency planning</li> <li>• Think of the unthinkable and learn how to calculate the maximum sustainable capacity.</li> <li>• Explore future trends and innovations</li> <li>• Save hours of research time by discovering the latest technological innovations and making the right economic decisions.</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Drilling engineers</li> <li>• Drilling superintendents and foremen</li> <li>• Reservoir Engineers</li> <li>• Production Engineers</li> <li>• Petrophysicists</li> <li>• Geoscientists</li> <li>• Economists and planners</li> <li>• Facilities planning engineers</li> <li>• Accountants</li> <li>• Mid-level management</li> </ul>

DAY 1	DAY 2	DAY 3
<p><b>Essentials of the Industry</b></p> <ul style="list-style-type: none"> <li>• Meaning of petroleum</li> <li>• Typical oil and gas company objectives</li> <li>• Industry streams</li> <li>• World reserves and production</li> <li>• Peak oil</li> <li>• Production management</li> <li>• Quotas and capacities (OPEC/non-OPEC)</li> <li>• Market distribution and dynamics</li> <li>• Role of IOCs, NOCs and regulatory bodies</li> <li>• Glossary of terms</li> </ul> <p><b>Production Chemistry and Technology</b></p> <ul style="list-style-type: none"> <li>• Role and scope</li> <li>• Production chemistry</li> <li>• Elements of production technology</li> <li>• Reservoir production concepts</li> <li>• Performance of flowing wells</li> <li>• Well deliverability and production forecast</li> <li>• Units and conversions</li> <li>• <b>Case Study:</b> gas-oil ratio, inflow performance, effect of skin on well productivity</li> </ul> <p><b>Production Engineering</b></p> <ul style="list-style-type: none"> <li>• Completion concepts and techniques</li> <li>• Casing, tubing and wellhead</li> <li>• Completion equipment</li> <li>• Completion design</li> <li>• Artificial lift techniques</li> </ul> <p><b>Completion Practices and well Interventions</b></p> <ul style="list-style-type: none"> <li>• Completion installations</li> <li>• Multi zone completions</li> <li>• Well interventions</li> <li>• Production problems</li> <li>• Causes of low productivity</li> <li>• Effect of water-cut on economics</li> <li>• Abandonments</li> <li>• <b>Case Study:</b> Tubing length change, integrity of well hardware, gas lift rate</li> </ul>	<p><b>Production Facilities</b></p> <ul style="list-style-type: none"> <li>• Process selection</li> <li>• Oil and gas separation</li> <li>• Crude oil treating systems</li> <li>• Condensate stabilization</li> <li>• Gas dehydration</li> <li>• Produced water-handling systems</li> <li>• Pumps and compressors—centrifugal and reciprocating</li> <li>• Offshore production facilities</li> </ul> <p><b>Production Supply Planning and Scheduling</b></p> <ul style="list-style-type: none"> <li>• Control room</li> <li>• Oil and gas measurement and regulations</li> <li>• SCADA systems</li> <li>• Custody transfer and royalty payment</li> <li>• Metering systems</li> <li>• Specification and procedures</li> <li>• Distribution pipeline network</li> <li>• New metering technologies</li> <li>• Case study: Gravity separation, metering accuracy and financial impact</li> </ul> <p><b>Storage, Transportation and Marketing</b></p> <ul style="list-style-type: none"> <li>• Oil and gas storage</li> <li>• Transporting petroleum fluids</li> <li>• Sales and marketing</li> <li>• Challenges &amp; improvements</li> <li>• Vertical integration</li> </ul> <p><b>Environmental Concerns in Petroleum Production</b></p> <ul style="list-style-type: none"> <li>• Waste generation</li> <li>• Handling oilfield wastes</li> <li>• Waste management and minimization</li> <li>• Industry perception on HS&amp;E</li> <li>• Corporate responsibility</li> <li>• Safety standards</li> <li>• Environmental regulations in different regions</li> <li>• <b>Case Study:</b> Refining value, transportation cost, contamination limits</li> </ul>	<p><b>Economics of Production Management</b></p> <ul style="list-style-type: none"> <li>• Field appraisal and facilities planning</li> <li>• Feasibility studies</li> <li>• Capital investment planning and operating</li> <li>• Cost budgeting</li> <li>• Sensitivities analysis and investment</li> <li>• Grade estimate</li> <li>• Engineering, procurement and construction</li> <li>• Phases of production (primary, secondary and EOR)</li> <li>• Changing facilities needs</li> <li>• Economic limit</li> </ul> <p><b>Case Study:</b> Feasibility study, economic limit</p> <p><b>Human Resources Management</b></p> <ul style="list-style-type: none"> <li>• Corporate objectives</li> <li>• HR management challenges</li> <li>• Increasing project demands</li> <li>• Lack of qualified people</li> <li>• Ageing workforce</li> <li>• Ineffective skills transfer</li> <li>• Local resources development and training</li> <li>• Leadership and culture</li> <li>• Role of government regulatory agencies</li> </ul> <p><b>Disaster and Contingency Planning</b></p> <ul style="list-style-type: none"> <li>• Scenario planning</li> <li>• Think of the unthinkable</li> <li>• Minimal operational requirements</li> <li>• Alternates</li> <li>• Strategic reserves</li> <li>• Maximum sustainable capacity</li> </ul> <p><b>Future Trends</b></p> <ul style="list-style-type: none"> <li>• Intelligent (smart) wells</li> <li>• I-Fields</li> <li>• Hi-tech control rooms</li> <li>• Innovations</li> <li>• Big ideas</li> </ul>

## 5 Artificial Lift and Production Optimization

Day Instructor(s): Dr. Rajan N. Chokshi

Ever increasing demands related to cost savings and efficiency improvement require that the existing as well as planned oil and gas production assets are fully and optimally utilized. Since most-all oil and gas wells require artificial lift for the majority of their productive life, the artificial lift systems are important part of production operations for the entire lifecycle of an asset. Careful selection, design and operation of artificial lift equipment is extremely important for profitability. Efficient and cost-effective production workflows involve field management using digital oilfield concepts. Understanding of these important production concepts are a must in order to profitably exploit the existing assets to the fullest extent. The objective of this course is to:

- Provide an awareness of the fundamentals of production by introducing fluid flow, flow correlations, PVT/Black Oil, and discussing the inflow performance relationship (IPR), vertical lift performance (VLP), nodal analysis, and pressure gradient curves.
- Introduce applications of major forms of artificial lift like gas-lift (GL), reciprocating rod lift (RRL), electrical submersible pumping (ESP), progressing cavity pumping (PCP), hydraulic jet and piston pump (HJP), plunger and capillary injection.
- Provide knowledge to the participants about the entire lift system - from downhole to the surface - and relevant components for GL, RRL, ESP, PCP, HJP, and Plunger.
- Discuss challenges facing lift applications.
- Introduce digital oilfield and related aspects specific to artificial lift.
- Explore the importance of downhole monitoring and surface measurements.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the following:</p> <ul style="list-style-type: none"> <li>• A thorough treatment of artificial lift techniques for production optimization.</li> <li>• The basics as well as advanced concepts of each form of artificial lift systems from downhole to the surface including real-time optimization equipment and software.</li> <li>• Using appropriate software tools, how lift components are designed and analyzed.</li> <li>• Challenges facing lift applications.</li> <li>• Artificial lift selection and life cycle</li> <li>• How digital oilfield tools help address these challenges. Recent advances in real-time approaches to the production monitoring and lift management from field case studies</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Production engineers and field operators</li> <li>• Reservoir engineers</li> <li>• Completion Engineers</li> <li>• Drilling and facilities engineers working in integrated project teams</li> <li>• Anyone who is interested in learning about selection, design, analysis and optimum operation of artificial lift and related production systems.</li> <li>• Project and asset managers interested in expanding their understanding of the effects of artificial lift on the performance of their assets.</li> </ul>

DAY 1	DAY 2	DAY 3	DAY 4	DAY 5
<b>System Analysis &amp; Gas-lift</b> <ul style="list-style-type: none"> <li>• Pre-test</li> <li>• Multiphase flow</li> <li>• Inflow / Outflow Performance</li> <li>• Artificial Lift Systems: Basics, Why/What/How.</li> <li>• Continuous Gas-lift Overview</li> <li>• Applications, Pluses/Minuses</li> <li>• Mandrels</li> <li>• Valves</li> <li>• Well Performance Curve; Design example</li> <li>• Troubleshooting &amp; Surveillance</li> <li>• Optimization Approaches</li> </ul>	<b>Reciprocating Rod Lift</b> <ul style="list-style-type: none"> <li>• RRL Chain, Pump Motion, Applications, Pluses/Minuses</li> <li>• Pump</li> <li>• Dynamometer cards</li> <li>• Surface Pumping Units</li> <li>• Rod Strings &amp; Rod Life</li> <li>• Optimization using RPC, VFD</li> <li>• Design example</li> <li>• Special conditions: gas interference, deviated wells, heavy fluids</li> </ul>	<b>Electrical Submersible Pumps (ESPs)</b> <ul style="list-style-type: none"> <li>• ESP Overview, Applications, Pluses/Minuses</li> <li>• Pump</li> <li>• Intake</li> <li>• Gas Separator</li> <li>• Seal</li> <li>• Motor</li> <li>• Cable</li> <li>• Surface Equipment</li> <li>• Basic ESP Design</li> <li>• Well Performance Curve and Design considerations</li> <li>• Example</li> <li>• ESP Problems</li> <li>• Automation</li> </ul>	<b>PCP, Hydraulic Lift, Gas Well Deliquification</b> <ul style="list-style-type: none"> <li>• PCP Overview, Applications, Pluses/minuses</li> <li>• PCP Pump Fundamentals</li> <li>• Surface Equipment</li> <li>• System Design considerations, Example</li> <li>• Alternative configurations</li> <li>• Hydraulic lift basics; applications, Pluses/minuses</li> <li>• Pumps</li> <li>• Surface Equipment</li> <li>• Non-Traditional Uses</li> <li>• Gas Well Deliquification Problem</li> </ul>	<b>Capillary, Plunger Lift, Digital Oil Field</b> <ul style="list-style-type: none"> <li>• Capillary applications, pluses/minuses</li> <li>• Chemical Delivery</li> <li>• Selection considerations</li> <li>• Special applications in Shale, long perforations</li> <li>• Plunger lift applications, pluses/minuses</li> <li>• Plungers, BHA</li> <li>• Surface setup</li> <li>• Selection</li> <li>• Digital oil field: What &amp; Why</li> <li>• Components</li> <li>• Data Management</li> <li>• DOF Case study</li> <li>• Artificial lift selection: lift life-cycle and lift changeovers</li> <li>• Post-test</li> </ul>

**Note:** This course is customizable from one to five days length for a variety of audiences at appropriate skill and knowledge levels. Shorter and concise curriculum is available for project and asset managers interested in expanding their understanding of the effects of artificial lift on the performance of their assets.

# Project Management

**5**  
**Day** **Practical Instrumentation**  
Instructor(s): Dr. M. A. Choudhury

This 5-Day course covers the design basis of instrumentation, practical steps for project execution, construction & installation, pre-commissioning/commissioning, operation and maintenance, monitoring and control systems to be installed at oil and Gas facilities, refineries, chemical and petro-chemical plants.

Basically, this course covers overall duties and responsibilities of the instrument engineer in the above-mentioned industries. Guidelines and practical steps are mentioned here which outline the organisation and execution of an engineering project as it relates to instrumentation.

Project documents requirement and check list for successful completion of project has been listed. The principles outlined apply to projects whose capital investment range from small to largest of projects.

**What will this course cover?**

The basic objective of this course is to improve skills of Instrument engineers to complete Instrumentation related projects in a planned and systematic way. This course will highlight various types of instrumentation available in the market, suitable selection of right type instruments, practical steps for preparing specifications, installation & construction, commissioning to final inspection to ensure successfully completion a project.

What will you learn?	Who will benefit
<p>During this comprehensive study program, you will learn:</p> <ul style="list-style-type: none"> <li>• Instrumentation terms, concepts, diagrams and symbols</li> <li>• Pressure sources and the basic terms of pressure measurement</li> <li>• Level, temperature and flow measurements</li> <li>• Control valve principles and common valve types</li> <li>• New technologies such as smart instrumentation and fieldbus</li> <li>• Integrate a complete system (considering instrumentation and total errors) as well as selection criteria, commissioning and testing</li> <li>• Latest ISO requirements for a company</li> <li>• Overview of HAZOP studies</li> <li>• Understand reliability centered maintenance and spare parts analysis</li> <li>• Process control basics with an emphasis on control loops</li> </ul>	<p>This Practical Instrumentation course is suitable for practicing industry professionals looking to expand their current knowledge in the field of Industrial Automation, Instrumentation and Process Control. The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Facilities Engineer</li> <li>• Project Engineers/Managers</li> <li>• Asset Integrity Engineers/Managers</li> <li>• Instrument Engineers</li> <li>• Control Engineers</li> <li>• Instrument Inspection Engineers</li> <li>• Auditors</li> <li>• HSE related Technical Staff</li> </ul>

DAY 1	DAY 2	DAY 3	DAY 4	DAY 5
<p><b>Module 1: Project Initiation Requirements</b></p> <ul style="list-style-type: none"> <li>• Project Specification</li> <li>• Unit of Measurement</li> <li>• Site Data and Environment Conditions</li> <li>• Hazardous Area Classification</li> <li>• Drawings and Documents</li> <li>• Codes and Standards</li> </ul> <p><b>Module 2: Design Criteria for Instrumentation System</b></p> <ul style="list-style-type: none"> <li>• General</li> <li>• Scale Range</li> <li>• Identification of instruments</li> <li>• Enclosure</li> <li>• Connections</li> <li>• Material of Construction</li> <li>• Accessories</li> <li>• Process Take-Off Connections for Instruments</li> <li>• Instrument Junction Boxes</li> </ul> <p><b>Module 3: Transmission Systems</b></p> <ul style="list-style-type: none"> <li>• Introduction</li> <li>• Electrical Transmission System</li> <li>• Power Supply</li> <li>• Instrument Cables and Cable Glands</li> <li>• Cable Trays and Junction Boxes</li> <li>• Instrument Earthing</li> <li>• Pneumatic transmission system</li> <li>• Installation of Pneumatic System</li> <li>• Pressure Testing of Pneumatic System</li> </ul> <p><b>Problems and Solutions</b></p>	<p><b>Module 4: Pressure Measurement</b></p> <ul style="list-style-type: none"> <li>• Pressure Measurement Methods</li> <li>• Basic Performance and Accuracy</li> <li>• Project Specification Requirements</li> <li>• Installation considerations</li> <li>• Operation and Maintenance Inspection and Audits</li> <li>• Future pressure technologies</li> </ul> <p><b>Module 5: Level Measurement</b></p> <ul style="list-style-type: none"> <li>• Level Measurement Methods</li> <li>• Project Specification Requirements</li> <li>• Installation considerations</li> <li>• Operation and Maintenance Inspection and Audits</li> <li>• Future Level technologies</li> </ul> <p><b>Problems and Solutions</b></p>	<p><b>Module 6: Temperature Measurement</b></p> <ul style="list-style-type: none"> <li>• Temperature Measurement Methods</li> <li>• Project Specification Requirements</li> <li>• Installation considerations</li> <li>• Operation and Maintenance</li> <li>• Inspection and Audits</li> <li>• Future Temperature technologies</li> </ul> <p><b>Module 7: Flow &amp; Mass Measurement</b></p> <ul style="list-style-type: none"> <li>• Flow Measurement</li> <li>• Primary Methods</li> <li>• Project Specification Requirements</li> <li>• Installation considerations</li> <li>• Operation and Maintenance</li> <li>• Inspection and Audits</li> <li>• Future Flow technologies</li> </ul> <p><b>Problems and Solutions</b></p>	<p><b>Module 8: Control Instruments</b></p> <ul style="list-style-type: none"> <li>• Problems and Solutions</li> <li>• Types of Control Valves</li> <li>• Trim Types</li> <li>• Control valves and Accessories</li> <li>• Actuators and Valve Positioners</li> <li>• Selection and Sizing of Control Valves</li> <li>• Project Specification Requirements</li> <li>• Installation and Construction</li> <li>• Operation and Maintenance</li> <li>• Inspection and Audit</li> <li>• Emergency Shutdown valves (SDV)/Blow Down Valves (BDV)</li> <li>• Solenoid Valves / Limit Switches</li> </ul> <p><b>Module 9: Process Analyzers</b></p> <ul style="list-style-type: none"> <li>• Analyzers Operation Principles</li> <li>• Most Commonly Used Analyzers</li> <li>• Project Specification Requirements</li> <li>• Installation considerations</li> <li>• Operation and Maintenance</li> <li>• Inspection and Audits</li> </ul> <p><b>Problems &amp; Solutions</b></p>	<p><b>Module 10: Miscellaneous Instruments</b></p> <ul style="list-style-type: none"> <li>• Annunciator System</li> <li>• Transducers and Converters</li> <li>• Regulators</li> <li>• Fire and Gas Monitors</li> <li>• CCTV</li> <li>• Vibration Monitoring System</li> <li>• Custody Transfer Metering System</li> </ul> <p><b>Module 11: Quality and Reliability Assessment</b></p> <ul style="list-style-type: none"> <li>• Quality Certification ISO 9001</li> <li>• HSE Risk Assessment</li> <li>• HAZOP/Area Classification</li> <li>• Reliability Centered Maintenance and Operation</li> <li>• Spare Parts Analysis</li> <li>• Acceptability Testing (FAT and SAT)</li> </ul> <p><b>Problems &amp; Solutions</b></p>

**5**  
**Day** **Advanced Project Management**  
Instructor(s): Mr. M. S. Bilal

Advanced Project Management Professional Training is a hands-on program designed to equip trainees having experience in Project Management initiatives and campaigns based on Project Management Body of Knowledge (PMBOK®) Guide, 5th or 6th Edition. The program has been designed for project managers and team members who aim for advanced understanding of the project management processes and its interaction with program level governance in alignment with strategic objectives of the portfolio.

This five-day, specialized level course is for project managers, asset & resource managers, project control managers, and project engineers seeking an in-depth understanding of key topics associated with large domestic and international projects. This course provides advanced knowledge in project governance, risk management, reviews and approvals, stakeholder management, joint venture and non-operated projects, interface communication management, management information systems, contract strategy, and engineering & technology management.

It is an experiential learning process with building on the participants' knowledge base. Project management domains being covered are Initiation, Planning, Executing, Monitoring and Controlling, and finally the Closing of a project. The transfer of knowledge to our students is by mode of a very interactive and hands-on delivery within a practical learning environment. This training also provides insight to advanced knowledge in project governance and the enterprise risk management concepts.

**What will this course cover?**

We have a very interactive mode of transferring knowledge to our trainees within a practical learning environment. This training also provides insight to advanced knowledge in project governance and the enterprise risk management concepts, which we thoroughly cover in the Advance Project Management course.

What will you learn?	Who will benefit
<p>By the end of this course you will be able to appreciate advanced project management challenges:</p> <ul style="list-style-type: none"> <li>• Learn how Project Management professional methodology (Magical Grid) got evolved with ever rising field challenges</li> <li>• Governance related decisions for effective procedural upgrades for intelligent decision making, health check and stage gate reviews</li> <li>• Understanding the risk management related challenges in particular with Advanced Project Management scenarios</li> <li>• Clarifying the Stakeholder Management &amp; effective MIS usage</li> <li>• Contract Strategy &amp; Procurement Management (JV, etc.)</li> <li>• Importance of Lesson Learnt and OPA updates</li> <li>• Negotiating Requirement Management for improving Project Success rate</li> </ul>	<p>The following professionals will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Planning and Project managers</li> <li>• Maintenance Team-members and managers</li> <li>• Quality/Risk/Communications/HR Experts working for Projects</li> <li>• Oil &amp; gas engineers, geologists, onshore, off-shore facilities manager</li> <li>• Commercial managers and analysts</li> <li>• Economists &amp; business development personnel</li> <li>• Government officials / policy regulators</li> <li>• Business advisors/managers</li> <li>• Asset managers/Administration managers</li> <li>• E&amp;P managers / EPC clients</li> <li>• QA-QC Team members &amp; Managers</li> <li>• Construction Managers / Product managers</li> <li>• Procurement team members and managers</li> </ul>

DAY 1	DAY 2	DAY 3	DAY 4	DAY 5

**5**  
**Day** **Project Management Professional Dynamism**  
Instructor(s): Mr. M. S. Bilal

Project Management Professional Training is a hands-on program designed to equip trainees who have been a part of Project Management initiatives and campaigns and is based on the framework and guidelines of Project Management Body of Knowledge (PMBOK®), with focus on the latest evolutionary changes from 5th to 6th Edition published by PMI® USA. The program has been designed for project managers, team leads and members who desire a better understanding of the project management processes.

It is an experiential learning process, which progressively builds on the participants’ knowledge base. The domains under focus are Initiation, Planning, Executing, Monitoring and Controlling, and finally the Closing of a project. Initiation is covered on the first Day of the Training, which identifies the Stakeholders while developing the Project Charter. Practical tips for evolving Project Charter and developing Stakeholders Grid for effective Stakeholders Management Plan are shared for better governance and strategic alignment.

**What will this course cover?**

Key objective of this course is to know and understand the configuration of the project management interconnectivity within its respective knowledge areas and domains. This objective is met once the trainee gets to know where exactly his/her role fits in project management internationally acknowledged standard of project management and the framework of PMBOK Guide endorsed magical grid. This initial conceptual placement of the trainee on the project management paradigm leads way to next level of understanding how and when, with which tools and techniques one can intelligently sail through the projects by consulting the course contents. The course will cover the basic project management related tools and techniques, review of project management related documents and artifacts and referral to real life scenarios and calculations based on the real challenges of the trainees for effective and interactive learning. Workshops, class activities and simulations are quite frequent for experiential learning.

What will you learn?	Who will benefit
<p>By the end of this course you will be able to fully understand the Project Management Fundamentals and its Professional Dynamism:</p> <ul style="list-style-type: none"> <li>• Learn how to configure Project Management professional methodology (Magical Grid) to become active team member and project leader</li> <li>• Classify the main Domains of Project Management by knowing their placement, importance and time line to better execute project constraints</li> <li>• Understanding the Risk management working methodology by knowing how to refer and benefit from Risk Registers</li> <li>• Clarifying the Costing concepts. Earned Value Management (EVM) calculations and interpretations by referral to real project scenarios</li> <li>• QA-QC interaction with special focus on intelligent Quality Plans fulfilling Stakeholders requirements in risk managed mode</li> <li>• Practice hands on experience in building your own Project Management Plan and its evolutionary dynamism through Project Management Domains</li> </ul>	<p>The following professionals will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Planning and Project managers</li> <li>• Maintenance Team-members and managers</li> <li>• Quality/Risk/Communications/HR Experts working for Projects</li> <li>• Oil &amp; gas engineers, geologists, onshore, off-shore facilities manager</li> <li>• Commercial managers and analysts</li> <li>• Economists &amp; business development personnel</li> <li>• Government officials / policy regulators</li> <li>• Business advisors/managers</li> <li>• Asset managers/Administration managers</li> <li>• E&amp;P managers / EPC clients</li> <li>• QA-QC Team members &amp; Managers</li> </ul>

<ul style="list-style-type: none"> <li>• Evolutionary shift in Project Management Life Cycle based on technological challenges, diverse stakeholders and quality requirements</li> <li>• Importance of OPA, EEF, Archiving lesson Learnt, Procurement related contracts, Negotiations, Project Manager's characteristics, Change Control Mechanisms and protocols</li> </ul>	<ul style="list-style-type: none"> <li>• Construction Managers / Product managers</li> <li>• Procurement team members and managers</li> </ul>

**5**  
**Day** **Risk Management Professional Dynamism**  
Instructor(s): Mr. M. S. Bilal

Risk Management ~ Professional Approach is a hands-on training program which is designed to be conducted in facilitated workshop mode focused on the groups of trainees practically evolving their own risk related documents with the help of standardized formats.

Trainees are equipped with ANSI aligned PMBOK® Sixth Edition approach of Project Risk Management in compliance with Standard for Risk Management published by PMI® USA. Handbooks for SCM & Quality are also referred along-with the crux of relevant research studies. The program has been designed for business leaders, project managers, team members and high-profile business analysts who long for a better understanding of the project risk management processes and their interaction with the other project management domains and Operations. It is an experiential learning process, which is focused on the Risk Management Plan & Risk Register; their Qualitative & Quantitative Analyses, devising appropriate risk response strategies and Controlling the Risks through Risk Action Owners and Risk Owners. Enterprise level risk management, Risk Governance and Risk Related Simulations and artifacts are important components of the training.

Our approach refers back to FMEAs, Risk based Maintenance (RBM), SWOT Analysis and Root Cause Analysis but is focused on the applicability of the concept of Risk Management not only for negative risks (Threats) but also for positive risks (Opportunities). Critical Success Factor (CSF) of the training is to enable the trainees to develop Risk Management Plan and the Risk Register fulfilling their own professional needs.

**What will this course cover?**

Our focus is to plan, execute and manage the Risk Management throughout the Project Management Life Cycle, not only for both iterative incremental and Adaptive Life Cycles but also for applicability of Risk philosophy to Operations (including Supply Chains), Maintenance (RBS), Quality (FMEA) and last but not the least the Projects related risks (Risk Registers). Project Risk Management is being governed through portfolio defined strategic objectives within Program Life Cycle governance protocols. Samples of Risk Management Plan and Risk Registers are also shared with the trainees for their future professional use.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the Project Management Fundamentals and its Professional Dynamism:</p> <ul style="list-style-type: none"> <li>• Learn how to integrate risk management domain with ANSI acknowledged Project Management Professional methodology to become smart risk team member and leader</li> <li>• Understanding the Risk management working methodology by knowing how to refer and benefit from Risk Registers</li> <li>• Clarifying the Costing concepts with reference to Contingency and Management Reserves by referral to real project scenarios</li> <li>• Practice hands on experience in building your own Risk Management Plan and its evolutionary dynamism through Project Management Domains</li> <li>• Evolutionary shift of Risk Management in different Project Management Life Cycles based on technological challenges, diverse stakeholders and quality requirements</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Planning and Project managers</li> <li>• Maintenance Team-members and managers</li> <li>• Quality/Risk/Communications/HR Experts working for Projects</li> <li>• Oil &amp; gas engineers, geologists, onshore, off-shore facilities manager</li> <li>• Commercial managers and analysts</li> <li>• Economists &amp; business development personnel</li> <li>• Government officials / Policy regulators</li> <li>• Business advisors/managers</li> <li>• Asset managers/Administration managers</li> <li>• E&amp;P managers / EPC clients</li> </ul>

# For Nontechnical & Non-Geoscientists

### 3 Fundamentals of Oil & Gas

**Day** Instructor(s): M. A. Mian, Dr. Qamar J. Sharif, Sikandar Gilani or Jenny Spalding

The oil and gas industry employs people with diverse skills, experience and academic backgrounds. But recent studies have shown that key decision-makers are not always familiar with the sector's technical operations, commercial drivers or the complex jargon and terminology used. This means that industry risks are often not fully understood, which could be very damaging for your business.

The 3-Day course is an entry-level course designed for those seeking business advantages. There are non-technical personnel in the companies (legal, finance, HR, HSE, marketing, IT, non-geoscience and administration etc.) who are not at all familiar with how the industry functions and the drivers behind it. On the other hand, there are many other businesses that are providing services to the oil and gas industry (accounting firms, stock brokers, legal firms, recruitment agencies, project management, and secretarial services and so on) that are also foreign to the day to day operations of the industry. This course, designed in simple layman terms, covers the upstream (exploration and production), mid-stream and downstream sectors of the industry. It's aimed at non-technical people within exploration, production, refining and service companies, as well as professional advisors, investors and suppliers.

You'll gain insight into current issues, industry terminology, how money flows through the entire business chain, how different parts of the business interact with each other and with other companies, as well as with external investors.

#### What will this course cover?

The course will serve as an orientation to the oil and gas industry. It will provide the jargon used in the industry, the disciplines involved in finding the oil and gas and bringing all the way to the consumer. The steps in finding oil and gas, drilling for oil and gas, field development, production, processing of the products, transportation, and storage etc. will be covered. The course will also cover the commercial side of the business.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the following:</p> <ul style="list-style-type: none"> <li>• Gain a comprehensive overview of petroleum and gas industry operations</li> <li>• Confidently master the technical terms: enhance your credibility with colleagues and clients</li> <li>• Explore the latest issues in exploration, drilling, production, transportation, storage, product prices, price risk management, world legal systems, economics and much more</li> <li>• Understand the energy value chain – from prospect to the burner tip</li> <li>• Evaluate the major costs, risks and uncertainties in oil and gas markets and projects calculate the maximum sustainable capacity.</li> <li>• Explore future trends and innovations</li> </ul>	<p>The following oil &amp; gas company personnel will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Planning managers</li> <li>• Non-Geoscience engineer</li> <li>• Analysts &amp; Commercial managers</li> <li>• Economists, bankers and stock brokers</li> <li>• Government officials &amp; Business advisors</li> <li>• Asset managers</li> <li>• IT, HR and HSE personnel</li> <li>• Finance, accounting, auditing, taxation and legal personnel</li> <li>• Administrative secretaries</li> </ul>

DAY 1	DAY 2	DAY 3
<p><b>General Industry Overview &amp; Basic Concepts</b></p> <ul style="list-style-type: none"> <li>• Meaning of Petroleum</li> <li>• Typical oil &amp; gas company objectives</li> <li>• Typical oil &amp; ---	---	---

# Downstream

**3**  
**Day** **International Oil Supply & Trading**  
Instructor: Syed Hasnain or Peter Hendry

This 3-Day course is designed to provide an overview of the physical aspects of international downstream operations covering refinery economics and global supply and trading in both crude oil and refined products. It will offer effective training one can get for handling and managing commercial oil operations in oil refineries and marketing operations. The course will cover all aspects of international business starting from Well head to Wheels, i.e. crude oil production, refining, transportation, sales, supply, shipping, trading, and marketing and risk management. The course is designed on numerous case studies and problem solving using real-life examples which generally emerge in oil companies.

This course will bridge the gap between theory and practice and provide necessary skills in understanding the physical aspects of refining and marketing. It will also cover how commercial designs are made in various business units to optimize refining business in a commercial environment.

**What will this course cover?**

The morning sessions will mostly be made up of lectures, which will emphasize the theoretical aspects of various functions involved in refining and marketing operations and international oil trading. The afternoon sessions will concentrate on case studies and solving problems based on the theories learned in the morning sessions.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the International Oil Supply &amp; Trading:</p> <ul style="list-style-type: none"> <li>• Overview of global oil business</li> <li>• Global supply/demand balance</li> <li>• Impact of refining operations and economics</li> <li>• Products GPW and refining measures</li> <li>• How crude oil and product markets are structured</li> <li>• Crude and products pricing</li> <li>• Marine transportation and shipping economies</li> <li>• Supply and trading margins</li> <li>• Risk management and hedging techniques</li> <li>• Negotiating oil sales/purchase contracts</li> </ul>	<p>The following oil &amp; gas company personnel and personnel of companies providing services to oil &amp; gas companies will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Oil and Gas Engineers</li> <li>• Planning Engineers</li> <li>• Marketers and Traders</li> <li>• Business Analysts</li> <li>• Product Managers</li> <li>• Banking and Government officials</li> <li>• Finance and Accountant Analysts</li> <li>• Risk managers</li> <li>• Engineering companies</li> <li>• Procurement and Sourcing</li> <li>• Investors</li> </ul>

DAY 1	DAY 2	DAY 3
<p><b>Overview of Global Downstream Business</b></p> <ul style="list-style-type: none"> <li>• Global Supply/demand balance</li> <li>• Overview of refinery operations</li> <li>• Impact of refining configuration on economies</li> <li>• Crude oil types and characteristics</li> <li>• Crude oil yield and GPW</li> <li>• Products specification and its significance</li> <li>• Products blending (gasoline, gas oil and fuel oil)</li> <li>• Calculation of refining margins</li> <li>• Introduction to petrochemicals</li> <li>• Commercial aspects of refining planning</li> </ul> <p><b>Case Study</b> Assessing three different refinery configurations and their impact on refinery profitability. The attendees will learn which configuration and mode of operation will yield the highest refining margins while selecting the best crude and feedstock.</p> <p><b>Problem Solving</b> Calculating gross refining margins for different crudes for base load and incremental crude runs and identifying optimal mode of operations. The analysis identifies whether to make or buy any specific product to meet products' supply commitments.</p>	<p><b>Supply, Transportation and Trading</b></p> <ul style="list-style-type: none"> <li>• Market structure and regional enclaves</li> <li>• Global trade flows</li> <li>• Crude oil and products pricing</li> <li>• Light/Heavy and Sweet/Sour differentials</li> <li>• Role of exchange and benchmarks</li> <li>• Marketing, Supply and Trading</li> <li>• Supply delivery modes (FOB, C&amp;F and Ex-Ship)</li> <li>• Freight economies and ship chartering</li> <li>• Tanker operations and voyage economics</li> <li>• Calculating trading margins</li> <li>• Arbitrage trade and backhaul economics</li> <li>• Cargo operations and documentation</li> </ul> <p><b>Case Study</b> Running simulation model for a typical supply and trading organization to maximize refining profitability and trading margins under different pricing scenarios and market conditions</p> <p><b>Problem Solving</b></p> <ol style="list-style-type: none"> <li>1. How to analyze global trade patterns</li> <li>2. How price reporting agencies assess daily spot prices</li> <li>3. How crude oil grades can affect refining margins</li> <li>4. How shipping market functions and how voyage cost is calculated</li> </ol>	<p><b>Global Refining, Supply and Trading</b></p> <ul style="list-style-type: none"> <li>• Back-to-back trading</li> <li>• Products swap and time exchange</li> <li>• Back hauling economics</li> <li>• Crude processing deals</li> <li>• Role of brokers, inspectors and Middle man</li> <li>• Sale/purchase contracts</li> <li>• Introduction to risk management</li> <li>• Basic hedging techniques</li> <li>• Handling claims and disputes</li> <li>• Global oil market outlook – short/long term</li> <li>• Role of OPEC and energy Geopolitics</li> </ul> <p><b>Case study</b> Analyzing tools and techniques for maximizing trading margins through swap, time exchange and back hauling.</p> <p>The 2nd case study will focus on developing crude processing deals.</p> <p>The 3rd case study will analyze how trading risk is managed through hedging using future contracts</p>

**3**  
**Day** **Commercial Aspects of Oil Refining**  
Instructor: Syed Hasnain or Peter Hendry

This 3 Day is designed to provide an overview of crude oil and refining process covering physical and commercial aspects of refinery operations and economics.

The course will offer effective and practical knowledge of commercial parameters in oil refining and trading. It will make attendees understand how crude supply and products trading can improve refining margins and how commercial decisions are made for refinery economics and planning.

The course material covers refining process, refinery economics, crude selection, oil pricing, supply and trading, marine freight, and project economics using real-life examples generally practices in refining and marketing organizations.

Bridging the gap between theory and practice, this course will provide you with the necessary skills in understanding physical aspects of refining and marketing and how commercial decisions are made in various business units to optimize refining business in a commercial environment.

The morning sessions will mostly be made up of lectures emphasizing theoretical aspects of various functions involved in refining and marketing operations, while the afternoon sessions will concentrate on case studies and solving problems based on theories learned in the morning session.

**What will this course cover?**

The key objective of this course is to give attendees a basic knowledge of refining commercial business. It will enhance participants understanding through active discussions and using real life examples of how refineries are commercially operated, and how margins are maximized using trading tools. It will help participants understand how market functions work and how refinery profitability can be enhanced through operating parameters and exploiting market conditions.

What will you learn?	Who will benefit
<p>On completion of this course you will be able to fully understand the International Oil Supply &amp; Trading:</p> <ul style="list-style-type: none"> <li>• Fundamental principles of refinery operations and economics</li> <li>• Refinery configuration and its impact on economics</li> <li>• Calculation of feedstock cost and refining margins</li> <li>• How crude oil and product markets are structured</li> <li>• How refining operations are optimized</li> <li>• Calculating freight cost and voyage economics</li> <li>• Arbitrage trade and calculating trading margins</li> <li>• Negotiating oil sales/purchase contracts</li> <li>• Managing cargo operations and documentation</li> <li>• How to develop and operate business plans</li> </ul>	<p>The following oil &amp; gas company personnel and personnel of companies providing services to oil &amp; gas companies will benefit from the knowledge shared in this course.</p> <ul style="list-style-type: none"> <li>• Oil and gas engineers</li> <li>• Planning engineers and managers</li> <li>• Marketers and traders</li> <li>• New entrants to the downstream oil functions</li> <li>• Business analysts</li> <li>• Product managers</li> <li>• Banking and government officials dealing with petroleum downstream</li> <li>• Finance and accounting analysts</li> <li>• Procurement and Sourcing</li> <li>• Investors</li> </ul>

DAY 1	DAY 2	DAY 3
<p><b>Overview of Refining Process and Operations</b></p> <ul style="list-style-type: none"> <li>• Introduction to refining process</li> <li>• Overview of refinery operations</li> <li>• Refining operations</li> <li>• Refinery configuration</li> <li>• Impact of configuration on economics</li> <li>• Refinery operating cost</li> <li>• Crude oil types and characteristics</li> <li>• Crude selection and types of feedstock</li> <li>• Products yield and GPW</li> <li>• Calculation of refining margins</li> </ul> <p><b>Case Study</b> Assessing three different refinery configurations and their impact on refinery profitability. The attendees will learn which configuration and mode of operation will yield the highest refining margins while selecting the best crude and feedstock.</p> <p><b>Problem Solving</b> Calculating gross refining margins for different crudes for base load and incremental crude runs and identifying optimal mode of operations. The analyses identify whether to make or buy any specific product to meet products' supply commitments.</p>	<p><b>Refining Economics &amp; Planning</b></p> <ul style="list-style-type: none"> <li>• Introduction to refined products</li> <li>• Products grade and classification</li> <li>• Products specification and its implication</li> <li>• Products blending (gasoline, gas oil and fuel oil)</li> <li>• Gross, variable and cash margins 3-2-1 crack speed</li> <li>• Refinery economics and planning</li> <li>• Developing operating and business plans</li> <li>• Project economics and cash flow</li> <li>• Refinery investments</li> </ul> <p><b>Case Study</b> Developing optimal product mix and crude throughput levels for a typical refinery from a range of crude oil grades which will maximize profits under different pricing scenarios. The attendees will also learn how to evaluate refinery projects and cash flow projections from refinery investments.</p> <p><b>Problem Solving</b></p> <ol style="list-style-type: none"> <li>2. Calculate 3-2-1 crack spread under different crude and pricing environments and making commercial decisions for selecting crudes and refining operating modes</li> <li>3. Running simulations for products blending, including octane/economics for gasoline and cutter stock for fuel oil. Attendees will also learn how to minimize economic penalty for quality giveaways.</li> </ol>	<p><b>Global Refining, Supply and Trading</b></p> <ul style="list-style-type: none"> <li>• Overview of global refining</li> <li>• Physical oil markets</li> <li>• Market structure and regional trading hubs</li> <li>• Crude oil and products' pricing</li> <li>• International oil supply and trading</li> <li>• Cargo delivery modes (FOB, C&amp;F, Ex-Ship)</li> <li>• Products arbitrage trading</li> <li>• Shipping and freight economics</li> <li>• Cargo nominations and operations</li> <li>• Price exposure and risk management</li> <li>• Principles of hedging</li> <li>• Oil contracts and its implications of commercial terms</li> </ul> <p><b>Case study</b> Running an interactive simulation for crude oil and products trading involving different pricing structures and various delivery modes in a real world. The attendees will also learn how spot barrels are traded and how arbitrage trades are done. The second case study will focus on shipping economics and cargo operations and how economies of scale in shipping can affect trading margins.</p> <p><b>Problem Solving</b></p> <ol style="list-style-type: none"> <li>1. Market structure and its implications on storage economics</li> <li>2. Calculation of netback pricing</li> <li>3. World scale and voyage costing</li> <li>4. Managing trading risk using future contracts and hedging techniques</li> <li>5. Analyzing oil contracts from commercial aspects</li> </ol>

**3**  
**Day** **Crude Oil Evaluation, Economics & Pricing**  
Instructor: Syed Hasnain or Peter Hendry

This 3-day course is designed to provide an overview of crude oil characteristics, its value in different refining configuration and pricing assessment in global oil markets. The course will offer attendees an effective and practical knowledge of how different crude oil grades are worth to different refiners and how they are commercially valued and traded. The course will cover all important benchmarks crudes and other key grades which are openly traded in global markets. The focus will be mainly on Brent crude covering physical, futures and forward markets including hedging and risk management. The course will also touch on key elements of marketing, supply and trading including marine transportation and freight economics. The course material covers production, separation, storage, processing, evaluation, pricing, competitive analysis, sales, supply, trading and contract negotiations.

**Course Methodology**

The course would bridge the gap between theory and practice and provide necessary skills in understanding physical and commercial aspects of crude oil to refiners. It will instill the basic concept and key factors which are relevant for any crude in ascertaining its true value in a commercial and dynamic environment. The morning sessions will cover mostly lectures emphasizing theoretical aspects while the afternoon sessions will concentrate on case studies and solving problems based on theories learned in the morning session.

What will you learn?	Who will benefit
<p>On completion of the course, you would be able to learn and understand:</p> <ul style="list-style-type: none"> <li>• Overview of crude oil production</li> <li>• Crude oil types and characteristics</li> <li>• Understanding significance of light/heavy and sweet/sour crudes</li> <li>• Crude oil evaluation and assessment methods</li> <li>• Crude oil pricing and competitive analysis</li> <li>• Role of Brent market and other benchmarks</li> <li>• Physical, Futures and Forward markets</li> <li>• Crude oil sales, supply/trading and contract negotiations</li> <li>• Developing operating and business plans</li> </ul>	<p>Technical and non-technical professionals from oil &amp; gas industry and business and financial institutions, who wish to understand in a simple and jargon-free language the physical aspects of crude oil sales, supply and trading business. Those who want to gain commercial insight of how crude oil is converted into different refined products and how they are priced/valued in open markets for supply and trading.</p> <ul style="list-style-type: none"> <li>• Oil and Gas Engineers</li> <li>• Planning Engineers / Managers</li> <li>• Oil Marketing Managers / Traders</li> <li>• New Entrants to Refinery or Petroleum industry</li> <li>• Business Analysts</li> <li>• Banking and Government Officials</li> <li>• Finance and Accounting Analysts</li> </ul>

DAY 1	DAY 2	DAY 3
<p><b>Overview</b></p> <ul style="list-style-type: none"> <li>• Introduction to oil industry</li> <li>• Overview of global crude supply/demand</li> <li>• Introduction to crude oil production</li> </ul> <p><b>Crude Oil Characteristics</b></p> <ul style="list-style-type: none"> <li>• Crude oil characteristics</li> <li>• Benchmark crudes</li> <li>• Significance of light/heavy and sweet/sour crudes</li> <li>• Crude, condensate and other feedstocks</li> </ul> <p><b>Crude Oil Refining</b></p> <ul style="list-style-type: none"> <li>• Fundamentals of refining process</li> <li>• Refinery configuration</li> <li>• Refining margins</li> <li>• Refining operations and optimization</li> <li>• Impact of configuration on refining economics</li> </ul> <p><b>Exercises / Case Study</b></p>	<p><b>Evaluating Crudes</b></p> <ul style="list-style-type: none"> <li>• Crude oil evaluation, selection and assessments</li> <li>• 3-2-1 crack spread</li> <li>• Understanding refined products</li> </ul> <p><b>Pricing Mechanism</b></p> <ul style="list-style-type: none"> <li>• Introduction to crude oil pricing</li> <li>• Introduction to products pricing</li> <li>• Physical markets and regional hubs</li> <li>• Role of Exchange and Benchmark</li> <li>• Understanding Brent and North Sea crude markets</li> <li>• Understanding dynamics of US domestic and Canadian crudes</li> </ul> <p><b>Crude Oil Trading</b></p> <ul style="list-style-type: none"> <li>• Physical, Forward and Futures markets</li> <li>• Price exposure and risk management</li> </ul> <p><b>Exercise / Case Study</b></p>	<p><b>Crude Oil Trading (Cont'd)</b></p> <ul style="list-style-type: none"> <li>• Specifics of physical oil trading</li> <li>• International crude oil trading</li> </ul> <p><b>Crude Oil Transportation</b></p> <ul style="list-style-type: none"> <li>• Crude supply and transportation</li> <li>• Marine freight and economics</li> <li>• Backhaul supply economics</li> <li>• Crude processing deals</li> </ul> <p><b>Crude Oil Contracts</b></p> <ul style="list-style-type: none"> <li>• Crude oil contract negotiations</li> <li>• Types of oil contracts - legal and commercial implications</li> <li>• Regional market dynamics</li> <li>• Role of OPEC and geopolitics</li> <li>• Developing crude oil supply plans</li> </ul> <p><b>Exercise / Case Study</b></p>

**3  
Day**

## **Marine Transportation: Operations, Economics and Logistics**

**Instructor:** Syed Hasnain or Peter Hendry

This 3-day course is designed to provide an overview of shipping industry and practical aspects of tanker operations, chartering and logistics. The course will offer attendees an effective and practical knowledge of how voyage costs and estimation are done for oil tankers and dry cargo ships. The course will cover all important features of chartering covering loading and discharge operations including lay time and demurrage calculations. The focus will be mainly on voyage economics for oil supply and trading purpose. The course will also touch on key elements of tanker classification, main shipping routes, canal transit, charter party agreements, and role of brokers and cargo inspectors.

### **Course Methodology**

The course would bridge the gap between theory and practice and provide necessary skills in understanding technical and commercial aspects of shipping operations. It will instill the basic concept and key factors which are relevant in shipping industry for calculating the freight cost, voyage economics and loading/discharge operations. The morning sessions will cover mostly lectures emphasizing the theoretical aspects while the afternoon sessions will concentrate on case studies and solving problems based on theories learned in the morning session.

<b>What will you learn?</b>	<b>Who will benefit</b>
<p>On completion of the course, you would be able to learn and understand:</p> <ul style="list-style-type: none"> <li>• Ships types and characteristics</li> <li>• Charter Party Agreements</li> <li>• Understanding lay time, lay can and lay days</li> <li>• Using the World scale Book</li> <li>• Freight cost calculation and voyage economics</li> <li>• Cargo loading and discharge operations</li> <li>• Demurrage and dead freight calculations</li> <li>• Freight market - spot fixtures, bare boat and time charter</li> <li>• Ship/Shore difference, insurance coverage, claims and disputes</li> </ul>	<p>Technical and non-technical professionals from oil &amp; gas industry and business and financial institutions who wish to understand in a simple and jargon-free language the physical aspects of crude oil and refined products supply via marine transportation. Those who want to gain commercial insight of shipping industry and knowing how freight costs and voyage economics are calculated for making commercial decisions in oil supply and trading.</p> <ul style="list-style-type: none"> <li>• Oil and Gas Engineers</li> <li>• Planning Engineers / Managers</li> <li>• Oil Marketing Managers / Traders</li> <li>• New Entrants to Shipping or Petroleum industry</li> <li>• Business / Commercial Analysts</li> <li>• Banking and Government Officials</li> <li>• Finance and Accounting Analysts</li> </ul>

DAY 1	DAY 2	DAY 3
<p><b>Shipping Industry</b></p> <ul style="list-style-type: none"> <li>• Introduction to shipping industry</li> <li>• Global oil markets and tankers role in supply/trading</li> <li>• Ship sizes, categories and characteristics</li> </ul> <p><b>Freight Market</b></p> <ul style="list-style-type: none"> <li>• Understanding freight market</li> <li>• Introduction to Worldscale Book</li> <li>• Basic elements of charter parties</li> <li>• Types of charter party</li> <li>• Tanker chartering practices</li> <li>• Chartering for crude oil</li> <li>• Chartering for refined products</li> <li>• Chartering for solvents and chemicals</li> <li>• Fixture negotiations</li> <li>• Post fixture problems</li> </ul> <p><b>Exercises / Case Study</b></p>	<p><b>Freight Cost &amp; Economics</b></p> <ul style="list-style-type: none"> <li>• Freight cost calculation</li> <li>• Voyage economics - tanker</li> <li>• Voyage economics - dry cargo</li> </ul> <p><b>Operations</b></p> <ul style="list-style-type: none"> <li>• Port operations and role of Ship Agents</li> <li>• Tanker operations - nominations / scheduling</li> <li>• Cargo operations - loading / discharge</li> </ul> <p><b>Cargo Specifications</b></p> <ul style="list-style-type: none"> <li>• Cargo delivery mode</li> <li>• Cargo documentation</li> <li>• Ship/Shore difference</li> <li>• Understanding laydays, laycan and laytime</li> <li>• Demurrage and Dead freight calculations</li> </ul> <p><b>Exercise / Case Study</b></p>	<p><b>Freight Market</b></p> <ul style="list-style-type: none"> <li>• Freight market structure</li> <li>• Freight assessment - Baltic Exchange and LTBP</li> <li>• Maritime fraud</li> <li>• IMO regulations</li> <li>• Role of P&amp;I club</li> <li>• Oil supply and trading</li> <li>• Contract of Affreightment</li> <li>• Backhaul supply economics</li> <li>• Dispute, Claims and Insurance</li> <li>• Global routes and chartering hubs</li> <li>• Suez Canal transit / Sumed pipeline</li> </ul> <p><b>Exercise / Case Study</b></p>

**3**  
**Day** **Petroleum Refining for non-Technical Persons**  
Instructor: Syed Hasnain or Peter Hendry

This 3-day course is designed to provide an overview of basic refining process, operations and configuration in a non-technical language. The course will offer attendees an effective and practical knowledge of crude oil processing in refineries and how different processing units and configuration affects the profitability of a particular refinery. The course will demonstrate the importance of various process functions and unit operations required for maximizing the refining margins under different feedstock. The course material covers refining process, unit operations, plant configuration, crude characteristics, crude selection, refined products, products grade and specifications, supply trading and marine freight using real life examples generally practiced in refining and marketing organizations.

**Course Methodology**

The course would bridge the gap between theory and practice and provide necessary skills in understanding physical aspects of refining to marketing and supply organizations. It will instill the basic concept and key factors which are relevant for refineries to operate in commercial and dynamic environment. The morning sessions will cover mostly lectures emphasizing theoretical aspects while the afternoon sessions will concentrate on case studies and solving problems based on theories learned in the morning session.

What will you learn?	Who will benefit
<p>On completion of the course, you would be able to learn and understand:</p> <ul style="list-style-type: none"> <li>• Fundamentals of refinery process</li> <li>• Different processing units and its functions</li> <li>• Plant configuration and its impact on economics</li> <li>• Crude oil characteristics</li> <li>• Criteria of selecting feedstock</li> <li>• Calculation of feedstock cost and refining margins</li> <li>• How refining operations are optimized?</li> <li>• Refining planning and scheduling</li> <li>• Developing operating and business plans</li> </ul>	<p>Technical and non-technical professionals from oil &amp; gas industry and business and financial institutions who wish to understand in a simple and jargon-free language the physical aspects of commercial refining including supply/trading and who want to gain commercial insight of how crude oil is converted into different refined products and how they are priced/valued in open markets for supply and trading.</p> <ul style="list-style-type: none"> <li>• Oil and Gas Engineers</li> <li>• Planning Engineers / Managers</li> <li>• Oil Marketing Managers / Traders</li> <li>• New Entrants to Refinery or Petroleum industry</li> <li>• Business Analysts</li> <li>• Banking and Government Officials</li> <li>• Finance and Accounting Analysts</li> </ul>

DAY 1	DAY 2	DAY 3
<p><b>Introduction</b></p> <ul style="list-style-type: none"> <li>• Introduction to oil industry</li> <li>• Chemistry of petroleum</li> <li>• Integration of refinery with oil industry</li> </ul> <p><b>Crude Oil Characteristics</b></p> <ul style="list-style-type: none"> <li>• Distillation curves</li> <li>• Composition</li> <li>• Fractions</li> <li>• Cutting crudes</li> <li>• Gravities / Sulfur content</li> </ul> <p><b>Fundamentals of Refining Process</b></p> <ul style="list-style-type: none"> <li>• Atmospheric Distillation</li> <li>• Vacuum Distillation</li> <li>• Catalytic Reforming</li> <li>• Hydrocracking</li> <li>• Cat Cracking</li> <li>• Alkylation</li> </ul> <p><b>Residue Reduction</b></p> <ul style="list-style-type: none"> <li>• Thermal Cracking</li> <li>• Coking</li> <li>• Visbreaking</li> <li>• Hydro-treating and Sulfur Plants</li> <li>• Ethylene Plants</li> </ul> <p><b>Exercises / Case Study</b></p>	<p><b>Introduction to Refined Products</b></p> <ul style="list-style-type: none"> <li>• LPG</li> <li>• Naphtha</li> <li>• Gasoline</li> <li>• Jet Fuel</li> <li>• Diesel</li> <li>• Fuel Oil</li> <li>• Asphalt</li> <li>• Lubes</li> <li>• Solvents</li> <li>• Products grade and classification</li> <li>• Products specification and its implication</li> </ul> <p><b>Products Blending</b></p> <ul style="list-style-type: none"> <li>• Gasoline blending</li> <li>• Diesel blending</li> <li>• Fuel oil blending</li> <li>• Crude oil, Condensate and Natural Liquids</li> <li>• Fuel Values - heating content</li> <li>• Petrochemicals</li> <li>• Derivatives and other special chemicals</li> </ul> <p><b>Exercise / Case Study</b></p>	<p><b>Refinery Configurations</b></p> <ul style="list-style-type: none"> <li>• Simple refinery</li> <li>• Simple and Complex Refineries</li> <li>• Impact of configuration on economics</li> <li>• Refinery operating cost</li> <li>• Product yields and GPW</li> </ul> <p><b>Refinery Margins</b></p> <ul style="list-style-type: none"> <li>• Gross refining margins</li> <li>• Net refining margins</li> <li>• Factors affecting refinery margins</li> <li>• 3-2-1 crack spread</li> <li>• Refinery economics and planning</li> <li>• Physical markets and trading hubs</li> <li>• Oil pricing and role of benchmark</li> <li>• Developing refinery operating and business plans</li> <li>• Project economics and cash flow</li> </ul> <p><b>Exercise / Case Study</b></p>

# Leadership

**5**  
**Day** **Principled Inside-Out Leadership – The Power of Authentic Influence**  
Instructor(s): Dr. Gerhard Van Rensburg

Principle-based leadership simplifies and grounds the multifaceted concept of leadership in the range of principles that guide leaders' thinking, behaviors and approaches to the task of leading. It stems from the belief that leaders grow their effectiveness and influence by internalizing key principles. Awareness of the principles and the lack of their practical application in the various situations that require leadership, challenge the leader's commitment to further development. It can be described as an inside-out leadership. It engages the leader's belief and value system as opposed to merely teaches theory, models and tactical approaches.

Three areas are equally important in the development of a leader:

- What the leader models in his/her person (leading self)
- The direction the leader is able to give (leading change)
- The level of engagement and commitment the leader is able to get from others (leading others)

The purpose of the course is to give participants insight into the principles that leadership is built on and help them engage with the various themes through the introduction of theories, models and ideas, as well as facilitated reflection.

**What will this course cover?**

The course provides a broad, but deep base for 21st century leadership in all different contexts in need of strong holistic leadership.

What will you learn?	Who will benefit
<p>During this comprehensive study program, you will learn:</p> <ul style="list-style-type: none"> <li>• Insight into leadership as it is based on principles in the areas of personal mastery (leading self), giving direction in an organizational context (leading change), and engaging and mobilizing people (leading others/teams);</li> <li>• Knowing themselves better and living with higher levels of awareness in terms of their internal challenges and how they relate to effective leadership;</li> <li>• The ability to practice inside-out (authentic) leadership with a higher degree of insight and skill;</li> <li>• The improved ability to identify when and where leadership is lacking and know how they can contribute with their own leadership;</li> <li>• Growth in their leadership effectiveness, knowing what to look for, reflect on and act on.</li> </ul>	<p>Corporate leaders at all levels from middle management to executive levels.</p>

DAY 1	DAY 2	DAY 3	DAY 4	DAY 5
<p><b>Leading Self – Principles (11)</b></p> <p>The leadership ‘table of influence’ rests on three legs (a) Leading self, (b) leading change and (c) leading others. First and foremost, the leader grows his leadership by learning to lead himself well. No-one will dispute the importance of the leader’s example in getting the support of others. Much of the good work that some leaders do through their natural abilities and skills, get undone by a poor example of character and personal behavior. The leading self-principles give answer to followers’ question: what will you model to me?</p> <ul style="list-style-type: none"> <li>• Introduction to inside-out leadership</li> <li>• Differentiating management and leadership</li> <li>• A holistic leadership development model</li> <li>• Leading self - Intrinsic foundation</li> <li>• Authenticity, Passion, Self-regard and Character</li> </ul>	<p><b>Leading Self - Continued</b></p> <ul style="list-style-type: none"> <li>• Leading self - personal competencies</li> <li>• Self-confidence</li> <li>• Self-awareness</li> <li>• Self-motivation</li> <li>• Self-discipline</li> <li>• Self-initiative</li> <li>• Perseverance</li> <li>• Life-balance and resilience</li> </ul>	<p><b>Leadership Change – Principles (8)</b></p> <p>To lead is to take the first step into the unknown. It is to make new paths with a desired destination in mind. Leading the change towards something better implies giving direction. There are important principles to build one’s strategic leadership. They are of a systemic nature and require holistic thinking. The leading change principles answer the followers’ question: what is our destination and how will we get there?</p> <ul style="list-style-type: none"> <li>• Understanding the change dynamic</li> <li>• Adaptability</li> <li>• Trend- and systems awareness</li> <li>• Organizational awareness</li> <li>• Visionary thinking</li> <li>• Strategic thinking</li> <li>• Cultural awareness</li> <li>• Technology awareness</li> </ul>	<p><b>Leading Others – Principles (13)</b></p> <p>In leadership, it is not about the efforts of an individual but the success of the team. If a leader fails in obtaining the voluntary support of others and mobilizing them, he will only be a leader in name. Many important principles need to be respected and guide the leader in his efforts to effectively engage others and influence them. Followers only give their full support if the leader can explain and demonstrate how he will engage every member of the team.</p> <p>Leading others - Laying the foundation for teamwork</p> <ul style="list-style-type: none"> <li>• Connecting with others</li> <li>• Building relationships</li> <li>• Being servant</li> <li>• Building support</li> <li>• Communication</li> <li>• Building team</li> <li>• Building trust</li> </ul>	<p><b>Leading Others – Leadership Practices</b></p> <ul style="list-style-type: none"> <li>• Leadership style</li> <li>• Recognition</li> <li>• Empower</li> <li>• Decision making</li> <li>• Honesty and integrity</li> <li>• Inspiring hope</li> </ul>

# Instructors' Biographies

## M. A. MIAN, P.E.

Mian has **40 years** of diversified experience in petroleum engineering, reservoir engineering, project economics and decision analysis. He had been involved in evaluating multi-billion-dollar oil and gas field development, LNG, GTL, Aluminum smelter, refinery, petrochemical, power and production sharing projects.

Mian has worked as a Sr. Petroleum Engineering Consultant with Saudi Aramco – 17 years, Head of QP Operations & Planning with Qatar Petroleum – 13 years, ZADCO (Abu Dhabi, UAE), Euratex Corporation (Colorado, USA), Keplinger & Associates (International Energy Consultants in Colorado, USA), and as Independent Consultant in Colorado, USA. He is a registered professional

Engineer in the state of Colorado, USA.

Mian is the author of **SIX** books

1. Petroleum Engineering Handbook for the Practicing Engineer, Vol. I and Vol. II, PennWell Books, Tulsa, Oklahoma, USA
2. Project Economics and Decision Analysis, Vol. I and Vol. II, PennWell Books, Tulsa, Oklahoma, USA
3. Tips & Tricks for Excel Based Financial Modeling, Vol. 1 & II, Business Expert Press, New York

He has also authored several papers in the Oil & Gas Journal, The Log Analyst, World Oil, SPE Journals, and Oil & Gas Financial Journal.

Mian is one of the pioneers in working with unconventional gas resources. He has extensively dealt with reserves evaluation and economics of tight gas and coalbed methane. Currently he is involved in applying his experience to shale gas resources. He has also served as an expert witness in US Federal court and Energy Commission hearings regarding tight gas pricing classification in the US.

He has delivered lectures in more than 25 countries around the globe. He has always received excellent feedback, as an expert presenter, from the participants of his courses.

## EDUCATION

- B.Sc Mechanical Engineering
- M.Sc Petroleum Engineering, Colorado School of Mines, Golden, CO, USA
- M.Sc Mineral Economics, Colorado School of Mines, Golden, CO, USA

## PORTFOLIO OF COURSES

- 5-Day – Project Economics, Risk & Decision Analysis
- 5-Day – Designing Efficient Oil & Gas Fiscal Systems
- 3 Day – Advanced Project Economics, Risk & Decision Analysis
- 3-Day – Economics of Production Sharing Agreements
- 3-Day – Development & Economics of Unconventional Resources
- 3-Day – Fundamentals of Oil & Gas
- 3-Day – Decline Curve Analysis, Diagnostic Methods and Performance Forecasting

## PUBLICATIONS

- Unnecessary and Avoidable Mistakes in Financial Calculations
- Comparison of Methods used to Calculate Netback Value
- Revisiting the Pitfalls and Misuse of WACC
- Custom Graphs Help Analyze Oil, Gas Operations
- Spreadsheet Programming Simplifies Drilling Calculations
- Program Quickly Solves Trial-and-Error Problems
- Creating Quality, Cost Effective Property Reports
- Predicting the Performance of Tight Gas Reservoirs

## COURSES DELIVERED IN

United Kingdom, Italy, Czech Republic, Norway, Sydney, Perth, Adelaide, Brisbane, New Zealand, Singapore, Malaysia, Hong Kong, Pakistan, South Korea, Kazakhstan, UAE, Kuwait, Qatar, Saudi Arabia, Bahrain, Bolivia, Brazil, Canada, Angola, Nigeria, Ghana, Mozambique, Algeria, Iran & South Africa.

## Dr. QAMAR J. SHARIF

Dr. Sharif is a petroleum engineering specialist with Saudi Aramco. He has over 35 years of practical experience in the oil and gas industry, including academia. He has diversified background in drilling, workover and completion operations, research, technology development and implementation, field development planning, well cost estimation, contracts and contracting strategy for oil and gas operations. He started his career on a steam-powered rig as a trainee drilling engineer in 1980. He worked as Assistant driller, driller and tour pusher on offshore drilling rigs in Abu-Dhabi, U.A.E.

After working 11 years in operations he joined graduate school and earned his MS and PhD in Petroleum Engineering from Texas A&M University, College Station, Texas. He has a unique blend of hands-on field operations and academic knowledge. He worked with Shell International Exploration and Production (SIEP) in Houston and was a recipient of the Shell President Award for premier performance for design and implementation of multi-string steam injection well design at Bakersfield, California.

Dr. Sharif has been involved in new joint ventures startup, product line development, commercialization strategy for Enventure GT, an Expandable Tubular Company (a JV between Shell and Halliburton). He deployed the first expandable casing, downhole.

He worked with Shell Nigeria, Farcodus Yokri Project, Warri and reduced well completion time by more than 50% for dual completions. He has expertise in developing novel ideas and transforming them into robust and practical solutions. He has been teaching stuck pipe prevention and lost time reduction course and conducted an awareness campaign for offshore drilling department. He has been involved in teaching undergraduate and graduate courses at King Fahd University of Petroleum and Minerals (KFUPM), Petroleum Engineering Department, Dhahran, Saudi Arabia. He brings out the best in his students.

He served as Curriculum Advisor - Well Construction discipline, representing Saudi Aramco with PetroSkills.

### EDUCATION

- B.Sc Mining Engineering
- M. Sc Petroleum Engineering, Texas A&M University, USA
- PhD Petroleum Engineering, Texas A&M University, USA

### PORTFOLIO OF COURSES

- Offshore and Deep Water Drilling
- Drilling Operations
- Stuck Pipe Prevention
- Drilling Operations Optimization
- Advanced Drilling Engineering
- Drilling Hydraulics Design

### PUBLICATIONS

- Fiber Glass Lined Tubular as completion string for corrosion protection
- Application of Drilling-with-Casing (DwC) Technology
- Meeting Economic Challenges of Deepwater Drilling With Expandable Tubular Technology
- Strategic Cost Leadership - reduction of completion time by more than fifty percent
- Probability of getting stuck while drilling and probability of freeing the pipe, if stuck
- Unconventional Methods for Shallow Water Flow Conductor Installation
- Carbonated Water Imbibition Flooding for fractured reservoirs

### COURSES DELIVERED IN

Cambodia, Australia, Singapore, Kuala Lumpur, Dubai, London, Houston, Mexico and Saudi Arabia

## Dr. SALMAN GHAURI

Dr. Ghouri is an independent energy consultant with over 37 years of experience in oil and gas industry: economic evaluation of oil and gas projects, risk assessment and strategy formulation. Extensive experience in long-term oil and gas demand and price forecasting, macroeconomic analysis and energy market assessments. Instructor and renowned speaker and published over 150 papers in international journals.

Worked as a Senior Economic Advisor to Qatar Petroleum for over 17 years in Strategic Planning & Policy Directorate, deeply involved in developing corporate-business plans, long-term price forecasting for crude oil, refined products, natural gas, and LNG. Prepared comprehensive monthly market as well as global and regional-economic reports. Prepared various policy papers including the future of LNG industry and what strategy should be adopted to remain competitive in over supplied market, later revised version was published in LNG Journal March 2013, 2016.

Worked as a Senior Advisor to Chairman Oil and Gas Development Company (OGDCL) during 1991-2001. Often chaired daily operational meetings, conducting executive briefings, preparing policy papers, reviewing investment proposals from economic and financial perspectives, evaluating corporate plans, and carrying-out independent economic and risk assessments of investment proposals to facilitate management in proper decision making. Deeply involved in preparation of policy papers on the desired issues and facilitated the Chairman OGDCL in different internal/external meetings, including briefing in Prime Minister/President of Pakistan and Cabinet

Salman is a well-known instructor in oil and gas industry/banking sector and has been teaching 5-day courses, on various topics, since 2012. He was also instructor in banking sector to train and deliver refresher courses on how to evaluate the project economic feasibility studies submitted to the bank for the loan approval.

Renowned public speaker presenting papers at several international-energy conferences: - IEA/OPEC, Emirates Center for Energy & Economic Development (ECSSR), GasArabia, SPE, IPTC, World Energy Council (WEC), World Petroleum Conference (WPC), Middle East Petroleum Conference, International Research Center for Energy and Economic Development (ICEED).

## EDUCATION

- MA Economics, University of Waterloo, Canada
- M.Sc Mineral Economics, Colorado School of Mines, Golden, CO, USA
- PhD. Mineral Economics, Colorado School of Mines, Golden, CO, USA

## PORTFOLIO OF COURSES

- 5-Day – Project Economics, Risk & Decision Analysis
- 5-Day – Global Energy Economics & Petroleum Projects Evaluation
- 5-Day – International Gas Market & Economic Evaluation of Gas Projects
- 5-Day – International Petroleum Management Program – Module 1 & 2

## PUBLICATIONS

- Cyclical Oil Prices – Is it a Necessary Condition to Balance Global Oil Supply/Demand?
- Defending Market Share: A Dilemma for OPEC or for the Shale Oil?
- OPEC strategic miscalculation-created-its-own-worst-enemy”
- Peak Oil and Technology – The Never Ending Game
- Plunging Oil Prices – US Tight Oil Boom or the Burst
- Aftermath of US Shale Gas – Oil index or Decoupling
- The US unconventional oil revolution: are we at the beginning of a new era for US oil
- Does LNG Industry need a new strategy for changing LNG market dynamics?
- Oil Price Volatility: Speculation or Market Fundamentals?”
- Assessing LNG as a potential catalyst to address - Europe’s natural gas supply challenges.
- Forecasting Natural Gas Prices using Cointegration Technique
- How most recent events alters expectations – A case of oil price forecasting
- An Assessment of Relationship between Oil Prices and US Oil Stocks

**COURSES DELIVERD IN** – Italy, Calgary, Nigeria, Dubai, Ghana, Port of Spain, Pakistan

## M. SALMAN BILAL

PE®, PfMP®, PgMP®, PMP®, PMI-PBA®, PMI-ACP®, PMI-RMP®, PMI-SP®, CAPM®, ASQ CSSGB®

Mr. Bilal has more than **16 years** of diversified project management experience. He is one of the only four Project Management Professionals in the world with **all eight (8) PMI®-USA** credentials and the youngest to possess such an outstanding status. Accredited Portfolio Manager (PfMP®), Program Manager (PgMP®), Project Manager (PMP®), Risk Manager (PMI-RMP®), Scheduling Professional (PMI-SP®), Agile Practitioner (PMI-ACP®), & Professional Business Analyst (PMI-PBA®) along with ASQ®-USA credential of Six Sigma (ASQ-CSSGB®).

Being registered Professional Engineer (PE®) Mr. Bilal has proven experience in high end Petroleum, Petrochemical, Automation & Manufacturing Industries. He has worked with **Schlumberger** Oil Field Services International in France, Saudi Arabia, Malaysia, Qatar and Pakistan and with Engro Chemicals Ltd. (Formerly Exxon, USA) in capacity of Instrumentation & Control Engineer and Six Sigma Project Manager. He has been involved in offshore and onshore well-testing projects for Well Completion & Productivity while providing engineering management services to various companies including RasGas, Saudi Aramco, Shell, Petronas, ENI, OGDCL, PPL, OMV, BP and OPI.

In addition to his many years of practical experience, Mr. Bilal is a Ph.D. Scholar conducting Engineering Management doctoral researches (Project Risk Management for Agile Operations). He is also a **SME Reviewer** for PMI® USA Global Standard on Requirements Management (2016). He has served as Assistant Professor of Electrical Engineering and now serving as Assistant Professor of Operations Management. He is a Resource Person/Faculty for **Executive Education** at FCC University and is Module Director for Business Strategy, Quantitative Methods, Management Information System, and Operations Management. He has been part of core team who initiated MS/M Phil Project Management Degrees in one public and two private Universities having international campuses. Being Business Analyst, he has successfully designed and conducted client specific Diplomas in Business Management (DBM) for Engro Foods and Honda Cars. Presently, he is **Program Director** for Honda-DBM in addition to managing Post Graduate Studies Programs (MBA, Executive MBA) at School of Management of US management led FCC-University.

Mr. Bilal is Principal Consultant/**Founder** of MSB Training Consultancy; Mentoring PMI® USA credentials/certifications and conducted hundreds of training workshops. More than 1,000 project management professionals have successfully achieved PMI® USA certifications under his guidance and mentorship. He is also **Training Consultant** for multinationals including TOTAL®, OMV®, Wateen®, FFC®, Engro® and Etisalat run PTCL®. He's **Resource Person** for Centre of Learning & Training (CLT), Government Engineering Academy (GEA), and Ministry of Planning & Development (P&D) of Pakistan.

Over his career, Mr. Bilal has received more than two dozen recognitions, including gold and silver medals, of performance.

## EDUCATION

- B.Sc Electrical Engineering (Specialization in Communication & Electronics)
- M.Sc Electrical Engineering (Dual Majors in Power Electronics & Control System Engineering)
- M.Sc Engineering Management (Project Risk Management)
- Ph.D Engineering Management (Research Phase: Risk Matrix & Agile Project Management)

## PORTFOLIO OF COURSES – PMI® USA Global R.E.P. (Registered Education Provider)

Created/Configured Professional Development Units (Acknowledgeable by PMI® USA)

- Project Management: PMP®: 35 PDU
- Project Risk Management: PMI-RMP®: 30 PDU
- Program Management Professional: PgMP®: 35 PDU
- Agile Project Management: PMI-ACP®: 24 PDU

## SERVICE TO ACADEMIA (Visiting Faculty to various Universities)

- MS/M. Phil Project Management: Risk Management Dynamics, Project Quality Management
- MBA/Executive MBA: Supply Chain Risk Management, Business Strategy, Management Information System
- BS (Honors) Operations Majors: Productivity Management, Operations Excellence

## DR. DAVID WOOD

Dr. Wood has more than **35 years** of international oil and gas experience and extensive technical, commercial and economic valuation expertise. He has been involved in many sectors of the industry fulfilling a wide range of roles from exploration and production operations, midstream and downstream projects, contract evaluation and negotiation, and senior corporate management. His early energy industry experience was gained with Phillips Petroleum, Amoco (Africa, Europe and UK), Lundin Oil (South America, Africa, Middle and Far East) and several smaller international companies. In the 1980's and 1990's, David was based for three years in South America and four years in the Middle East, involved in upstream oil and gas exploration and development management, petroleum economics and negotiations in many countries.

For the past two decades, David has worked as an independent international consultant, researcher, training provider and expert witness, based in the U.K. and working on projects, including acquisitions, divestments and business development around the world.

He has published an extensive body of work (some 250 publications; H-index 21+) including scientific and engineering research and diverse energy-related topics including: the international energy markets, petroleum economics and valuation, oil and gas fiscal designs, negotiations, LNG, GTL, gas storage and gas supply.

His current research interests include floating LNG, multi-objective optimization applied to portfolio economic valuations, drilling, production and project planning. He frequently acts as an advisor and/or trainer to governments and companies on many technical and commercial aspects of the oil and gas industry through his consultancy, DWA Energy Limited. This includes providing training on enhanced oil and gas recovery (EOR/EGR) and upstream management to technical organisations and financial institutions. He also has extensive editorial and publishing experience, e.g., as a founding editor of Elsevier's Journal of Natural Gas Science & Engineering in 2008/9 (which achieved an impact factor >2 from 2014 and 2016); serving as editor-in-chief for that journal from 2013 to 2016, and remaining on its editorial board; and, co-authoring books on petroleum economics / fiscal terms and LNG.

## EDUCATION

- B.Sc in Geology, Leicester University (UK)
- Ph.D in Geology, Geochemistry & Deep Ocean Drilling, Imperial College London, UK

## PORTFOLIO OF COURSES

- Petroleum Economics
- On-line MBA Program

## PUBLICATIONS & PRESENTATIONS

- Upstream Petroleum Fiscal and Valuation Modeling in Excel: A Worked Examples Approach
- International energy markets
- Petroleum economics and valuation
- Oil and gas fiscal designs
- Negotiations, LNG, GTL, gas storage and gas supply

## **SYED S. HASNAIN**

Syed was a Senior Marketing Manager in International Operations of Saudi Aramco Corporate HQ and recently retired. He served Saudi Aramco as the Group Head of North American markets for coordinating crude oil sales, supply and strategic planning. An international downstream veteran with more than **35 years** of high profile expertise in technical and commercial operations of crude oil and refined products with major emphasis on refinery economics, sales, marketing, supply, trading, logistics, contract negotiations, joint venture due diligence, business development and strategies. Syed has effectively interfaced with senior management in bringing innovative ideas and remained instrumental for enhancing corporate profits from sales and supply of integrated and complex refining and marketing system of 2.5 million barrels per day (MMBOD). His contributions and areas of expertise for enhancing downstream profitability were as follows:

- Regularly analyzed global market dynamics for recommending oil prices and optimizing refineries crude oil slate and operating plans.
- Conducted due diligence on several downstream projects for investments, business development and strategies to ascertain optimal portfolio fit.
- Developed Crude Oil Evaluation Model to assess competitive values of 37 crude oil grades which are actively traded in global oil markets. The mode was used for recommending oil prices.
- Analyzed global freight market and competitive voyage routings via Suez/Cape for long haul crude transportation to Europe and North America and negotiated new freight formula with Oil Majors.
- Developed and optimized short and long term refinery operating plans for multiple refineries integrated under one corporate umbrella.
- Conducted due diligence on JV refining operations and negotiated crude oil and products' transfer prices with ExxonMobil and Shell.
- Developed crude processing deals with independent refiners in Singapore, Korea and Italy.
- Developed AG Bunker market from a grass root level by positioning a VLCC floating storage.

### **EDUCATION**

- B.Sc Chemical Engineering
- MBA Master of Business Administration

### **PORFOLIO OF COURSES**

- Refinery planning, scheduling and optimization
- Commercial Aspects of Oil Refining
- International Oil Supply and Trading
- Fundamentals of Petroleum Downstream

### **PUBLICATIONS**

- Reducing OPEC crude production and impact on global markets
- Bifurcation of European crude pricing
- Dynamics of changing Asian crude marker
- How much Middle East crude supply for the US?
- Implication of Middle East Refining capacity increase on global trade flows.

## JENNY B. SPALDING

Jenny Spalding was a Petroleum Engineering Specialist with Saudi Aramco Services Co. She has more than **38 years** of experience in petroleum engineering, energy economics and corporate project economics. She has been involved in evaluating multi-billion dollars oil and gas field projects, the economic impact of energy pricing policies, and oil and gas reserves. She has worked for Saudi Aramco, Aramco Services Company, The World Bank, Shell and CERA and has authored papers for the World Bank, Saudi Aramco, and CERA. Her primary expertise is in petroleum project economics, portfolio and reserves assessment. She is a registered professional engineer in Louisiana.

Specific projects Ms. Spalding has been involved with include (a) being part of a Saudi Arabian Task Force to assess the economic impacts of energy pricing policies, (b) customer demand, cross subsidy effects and product price elasticities, (c) member of the Ghawar task force to analyze ways to increase ultimate recovery across the field areas, (d) prepared trend analysis of all new oil and gas production in Saudi Arabia to evaluate production across all Saudi Aramco fields and reservoirs to optimize production, and (e) was part of the Kingdom's reserves assessment team.

While with the World Bank, Ms. Spalding was engaged in (a) policy discussions with the Indian Government to reconcile domestic fuel and feedstock pricing and electricity pricing subsidies, (b) led a task force to Egypt to across cross subsidies between fuel substitutes and (c) coordinated the Global Environmental and Energy fund (GEF) for Eastern Europe. With CERA, Ms. Spalding authored numerous private reports which modeled the future growth of non-OPEC oil, examine Shell's downstream options in South America, and evaluated the financial implications of the changing oil and gas pricing relationships. In recent years, Ms. Spalding has been heavily involved in Saudi Aramco's training initiatives, working to develop Saudi human resources in the petroleum business.

### EDUCATION

- B.Sc Geological Engineering, Princeton University
- M.Sc Petroleum Engineering, Tulane University
- M.Sc Public Policy with a concentration in International Finance, Harvard University's Kennedy School.

### PORTFOLIO OF COURSES

- Fundamentals of Oil & Gas
- Project Economics, Risk & Decision Analysis
- Reservoir Engineering & Reservoir Management

### PUBLICATIONS

- Reservoir Management in Saudi Aramco: Leveraging Knowledge for the Future
- Saudi Economy in Perspective: (report issued for years 1995-1999)
- Increasing Private Sector Participation-Analysis of Saudi and Foreign Workforce
- Domestic Saudi Gas Policies: Cross subsidy effects and product price elasticity
- Energy Pricing Policies for Egypt: (White Paper)
- Eastern European Global Environmental Fund Outlook (Conference Paper, delivered Vancouver, 1989)
- The Future of Non-OPEC Oil
- The Developing Business and Politics of Oil in Latin America Reservoir Management in Saudi Aramco: Leveraging Knowledge for the Future
- Saudi Economy in Perspective: (report issued for years 1995-1999)

### COURSES DELIVERED IN

Saudi Aramco's Upstream Professional Development Center (UPDC), Qatar, Dubai, Korea, London, Johannesburg, Ghana and Qatar.

## MR. DAVOUD BARDAL

Mr. Bardal has more than **22 years** of international oil and gas experience and extensive technical, commercial and economic evaluation expertise. He has served as Sr. Reservoir Engineer with Reservoir and Chemical Engineering background with extensive simulation and field development planning skills. He has a track record for success in multi-national enterprises, proactive, confident senior professional with a proven ability to deliver the results in time, thrives in results-oriented challenging environments, nurturing talent and achieves high quality results through collaboration and performance management and excellent attention to details.

His specialties include reserves and resources evaluations, Oil and Gas Field Development Planning, economic modelling & risk analysis, subsurface peer assist, mentoring staff, reservoir simulation (Black Oil and Compositional) and history matching, uncertainty analysis and robust optimization, prospect evaluation, enhanced oil recovery (waterflood, miscible and immiscible gas injection and gas recycling), advanced integrated asset modelling, well modelling and nodal analysis, well test design and interpretation, decline curve analysis, PVT modelling and equation of state calibration, special core analysis, confident user of Petrel, Eclipse, CMG-IMEX and Petroleum Expert suite (Gap, MBAL, Prosper and Resolve) and expert user of Tempest-Enable and CMG-CMOST uncertainty analysis and history matching software interconnected with Python programming, strong analytical and technical problem solving skills and confident developer of Macros using Visual Basic and Python in Excel. He has been involved in conducting economic evaluation of multi-billion-dollar oil and gas field development projects. He has been involved in designing and modelling fiscal systems.

He has worked with the following companies.

1. Svenska Petroleum Exploration U.K. Limited – Reservoir Engineering Consultant
2. Sasol Exploration and Production International – Reservoir Engineering Consultant
3. Centrica Energy Exploration and Production – Lead Development Reservoir Engineer, International
4. Seven Energy International – Senior Reservoir Engineer
5. Naftkav Engineering & Services Co. – Project Leader & Sr. Reservoir Engineer
6. Tehran Energy Consultants – Reservoir Engineer

## EDUCATION

- B.Sc. Chemical Engineering, Process Design
- M.Sc. Chemical Engineering (Simulation Modelling)

## PORTFOLIO OF COURSES

- Petroleum/Project Economics with emphasis on Probabilistic Analysis
- Oil & Gas Reservoir Engineering
- Oil & Gas Reservoir Management
- Reservoir Simulation – Intermediate and Advanced

### **Dr. M. A. CHOUDHURY, C. Eng.**

Dr. Choudhury is an Instrument & Control System Engineering Consultant with Eco-Qatar in Doha, Qatar. He has previously worked with Qatar Petroleum (Doha, Qatar), Arabian Gulf Oil Company – ADNOC, (Abu Dhabi, UAE), Foster Wheeler Corporation (Reading, UK), Fisher Control (Leicester, UK) and British Iron and Steel Research Association (Sheffield, UK). He is registered as a Chartered Engineer with UK IET Institute.

Choudhury has **37 years** of diversified experience in the Petrochemical, Oil and Gas processing plants, Automatic Well testing, Oil Refineries, Onshore/Offshore facilities, Sulphur handling/loading terminal, Instruments and Process Computer Systems Industries.

He has been involved in writing extensive documents regarding asset integrity related governance documents including policies, procedures and specifications. He has extensive experience with Honeywell TDC system, ABB control systems, Fisher/Rosemount, Provox system, Fieldbus Technology and other SCADA and PLC based computer systems. Additionally, he has been implementing HSE & Quality Assurance, Quality Control and Technical Audits related activities utilizing ISO 9000 and 10011 series Standards.

Dr. Choudhury was the pioneer of raising Y2K problem for QP (Qatar Petroleum) operational systems and was selected as a member of management team to supervise all QP Operations' control systems to make them Y2K compatible.

Dr. Choudhury is considered as a subject matter expert (SME) in Instrument and Control Systems. He has delivered courses on Instrument and Control Systems in various countries. He has always received excellent feedback, as an expert presenter, from the participants of his courses.

### **EDUCATION**

- B.Sc (Hons.) in Systems and Control Engineering
- M.Sc. in Instrument and Process Control Engineering, Bradford University, Bradford, UK
- PhD in Instrument and Process Control Engineering, Bradford University, Bradford, UK

### **PORTFOLIO OF COURSES**

- 5-Day – Fundamentals of Process Control Systems
- 5-Day – Basic Plant Instrumentation Design and Selection
- 3 Day – Hazardous Area Classification in the Petroleum Industry
- 3-Day – Practical Instrumentation Course related to Oil and Gas Industry

### **COURSES DELIVERED IN**

United Kingdom, USA, UAE, Qatar, Pakistan & Libya

## **Dr. RAJAN N. CHOKSHI**

Dr. Chokshi works as an artificial lift and production ‘Optimizer’ for Accutant Solutions, a consulting firm out of Houston, USA. He has over 30 years of work experience in petroleum and software industries. He has worked at ONGC of India, The University of Tulsa artificial lift projects, CEALC and ConnectShip (consulting and software firms) and Weatherford (a global service company) in a variety of roles from petroleum engineer, research engineer, software developer, project manager, trainer, senior consultant, and a senior business leader. He has worked on many petroleum and software projects globally in the areas of multi-phase flow, artificial lift, production optimization, well performance improvement and real-time production monitoring.

Dr. Chokshi has taught many courses and conducted workshops for practicing professionals around the globe in public and private forums. He has co-authored over fifteen SPE papers. He has led the development of a semester-long curriculum and taught for senior-level university students in artificial lift and production optimization at Texas Tech and Missouri S&T universities. He led and guided industry experts in developing digital content like animations, iPad app, iBooks and webinars. He has delivered several SPE webinars.

Dr. Chokshi was an SPE Distinguished Lecturer for the 2015-2016 year. He has co-chaired an SPE artificial lift workshop. He serves on the SPE global committees for training and for the production awards.

### **EDUCATION**

- B.E. in Chemical Engineering, Gujarat University, India
- M.Tech. in Chemical Engineering, IIT, Kanpur, India
- Ph.D. in Petroleum Engineering, The University of Tulsa, OK, USA

### **SELECTED RECENT PUBLICATIONS**

- Importance of Downhole Measurements, Visualization and Analysis in Producing Unconventional Wells
- Consideration for Optimizing Artificial Lift in Unconventional
- Service Industry & University Collaboration in Teaching Production Optimization with Artificial Lift
- Unified Mechanistic Model for Steady-State Two-Phase Flow: Horizontal to Vertical Upward Flow
- Experimental Study and the Development of a Mechanistic Model for Two-Phase Flow Through Vertical Tubing

### **PORTFOLIO OF COURSES**

- 1-Day to 5-Days – Artificial Lift and Production Optimization
- 1-Day to 5-Days – Gas-Lift for Production Optimization
- 1-Day to 3-Days – Reciprocating Rod Lift
- 1-Day – Artificial Lift and Digital Oil Field
- 1-Day – Artificial Lift Selection for Shale and Tight Reservoirs
- 1-Day – Reciprocating Rod Lift for Shale and Tight Reservoirs
- 1-Day – Gas-Lift for Shale and Tight Reservoirs

### **COURSES DELIVERED IN**

USA, UK, Canada, Mexico, Venezuela, Colombia, UAE, Kuwait, Saudi Arabia, Oman, Bahrain, Libya, India.

## Dr. EMMANOUIL ION

Emmanouil Ion is a Compliance Specialist Adviser with extensive management experience gained in Wealth Management, Asset Management, Private Banking, AML/CTF/ABC Systems & Controls (SYSC), and Regulatory & Compliance Law Firms and Specialist Consultancy Firms over **20 years**. He is specialized in high-level management of multiple engagement teams operating in Reporting, Financial Sanctions, and Global Regulatory Activities (UK, U.S., EU, UN & International Standard Setting Bodies) fostering a culture of effective risk management and promoting institutional safety and soundness.

He is a former Senior Counsel, and has held high-level appointments including Specialist Adviser to an Egmont Group FIU for Financial Action Task Force (FATF) Regulatory Affairs.

Emmanouil has participated in Capacity Building Projects; has held Senior Management appointments for financial, maritime, procurement, and defense companies; and has managed big projects for Specialist Consultancy engaging with reputable institutions such as, Halliburton, UBS, Central Banks & International Financial Institutions, ABB, Czarnikow Rionda, STAYER, Raytheon, FURUNO, MTU, RR, Mitsubishi, Caterpillar, Daewoo Heavy Industries, SATA, STOLT Tankers, UN Food Program.

Emmanouil's consultancy work is highly specialized in the creation of dedicated Sandbox environments for Qualitative Analysis (QA) for highly matrixed institutions and training academies; Threshold Setting & Tuning; Development & Execution of Efficient Scenario Setting; and Scenario Logic Validation for AML and Red Flag Gap Analysis involving large volumes of Big Data including sensitive data such as, Customer Data, Account Data, and Transaction Data.

Emmanouil holds 54 Certifications from the United Nations, United Nations Global Compact & UNODC, World Bank Group, Banker's Academy, HM Government, U.S. Department of Justice, National Institute of Justice, U.S. Department of Defense Security Service, and U.S. Department of Homeland Security. He delivers professional training courses in Law, Compliance, Governance, Risk Management, Negotiation, Leadership, Conflict Management, Crisis Management, Alternative Dispute Resolution, and International Relations.

### EDUCATION

- BA International Relations
- M.Sc International Relations, London School of Economics (LSE), University of London, UK
- LLM International & Maritime Law, University of Hertfordshire, UK
- PhD. Law & Economic Crime, Institute of Advanced Legal Study (IALS), University of London, UK

### PORTFOLIO OF COURSES

- 5-Day – Competitiveness & Corporate Social Responsibility
- 5-Day – Knowledge Exchange – Peer-to-Pear Learning/Exchange
- 5-Day – Managing & Shaping Change in the 21<sup>st</sup> Century
- 5-Day – Critical Leadership Skills for Technical Executives
- 3-Day – Fundamentals of Risk Management
- 3-Day – FEMA IS-00906, Basic Workplace Security Awareness
- 3-Day – FEMA IS-00915, Protecting Critical Infrastructure Against Insider Threats
- 3-Day – Insider Threat Awareness

### PUBLICATIONS

- The Prestige Casualty and Resulting Initiatives in European and International Law, Ant. N. Sakkoulas Publishers, 2007
- Fundamental Principles of EU Law Against Money Laundering, Ashgate Publishing, 2014

### COURSES DELIVERED IN

UK, Ireland, Spain, Portugal, Germany, Austria, Switzerland, Italy, Spain Hong Kong, Singapore, Japan, and Thailand.

## Dr. GERHARD VAN RENSBURG

2015 Titans Building Nations Country winner in Education and Training (Private Sector)

Gerhard founded New Era Leadership and worked as a leadership and executive coach, development facilitator and academic supervisor since 2002. He holds a doctorate in leadership and organizational structures. He is currently an associate of The Da Vinci Institute for Technology Management (Pty) Ltd and one of Duke Corporate Education's network of global educators. He is a co-developer of the leadership development component of the National Human Resources Management Standards and certified as a PDA Analyst and MyPDA Coach. Since 2015 Gerhard is a director of the Future Leaders Africa online development journey.

Gerhard is well-known for his articles in the leadership field and is a column writer for the CEO magazine. He published two leadership books, *The Leadership Challenge In Africa* (foreword by Archbishop Desmond Tutu), and *Leadership Thoughts*. He is furthermore chosen by Motivational Press as one of their community of leading experts, thought leaders, and industry authorities. His articles were published in several leadership, management and human resources publications such as CEO, PMR, HR Future, HR.com and Business Brief.

His interventions include his sophisticated online leadership development program *32 Leadership Principles to Unlock Your Potential*. His clients include MTN, Transnet, BASF, Ubank, Auto & General, Coca Cola Fortune, Media24, Saint Gobain, University of Johannesburg, Beckman Coulter and Avery Dennison. As an academic service provider for The Da Vinci Institute in their PhD Program, Gerhard teaches his SAQA accredited courses: *The Leadership Challenge in Africa* and *21st Century Leadership*. He also serves as an external examiner of doctoral theses. Gerhard furthermore frequently delivers talks on leadership at various functions, conferences and summits. He was invited for interviews on radio talk shows such as *Paying it Forward*, *Life Tips* and *Tough Talk Radio Network*.

### EDUCATION

- BA (Hebrew and Philosophy)
- MCom (Leadership studies)
- MTh (Practical theology)
- DTh (Practical theology)

### PORFOLIO OF COURSES

- The Leadership challenge in Africa
- Principled Leadership

### PUBLICATIONS

- Books
  - *The leadership challenge in Africa* (foreword by Archbishop Desmond Tutu)
  - *Leadership Thoughts – Inspire Yourself Inspire Others*
- Acting on out purpose in life – action, the antidote to despair
- When to take on and when to let go
- The need for inclusive thinking
- Constructive conversations
- The cost of losing touch with humanity

### COURSES DELIVERED IN

South Africa & UK

## Dr. ALY KHORSHI

Dr. Aly Khorshid is globally recognized Shariah Scholar and Islamic Finance consultant. He has been involved with Islamic financial institutions for over 2 decades; expert on Shariah compliant finance within the Islamic law, Waqf family “Trust”, inheritance, capital market products, Fund Structure for global investment, Project finance, Due diligence, alternative finance and Islamic contracts.

Dr. Aly Khorshid is Sharia board member in selected Islamic institutions and served as wealth manager with several banks. In addition to the publications listed below, he is Joint author of several publications and many articles published on Islamic finance. He is a trustee member of Academy UK, fellow at ICMA center Henley Business School University of Reading UK, Diploma course director IFBL Luxemburg, Professor (Visiting) IBS, UTM University Malaysia, former visiting lecturer at El-Azhar University, Egypt, and visiting professor at Nile University Egypt. He was nominated for King Faisal International prize in 2006, runner-up for Mubarak Prize on Islamic studies 2010. He is a regular speaker on Islamic finance issues at conferences and TV. His current research interests are in developing Sukuk Waqf for development and education, Risk Management in Islamic financial institutions, developing new innovating products in financial engineering and developing practical Islamic stock trading & Shariah compliant capital market tools comparable with the global market. In addition to the following education, Dr. Khorshid also studied Fiqh and Shariah at Al-Azhar University (Egypt).

## EDUCATION

- BA Business Studies
- M.Sc in Management, UK
- PhD in Islamic Studies and Islamic Economics, University of Leeds (UK)

## PORTFOLIO OF COURSES

- 3-Day – Innovative Financial Engineering and Risk Management for Shariah Compliant Products
- 3-Day – Shariah Compliant Project Financing in the Oil & Gas Industry

## PUBLICATIONS

- Islamic Insurance “A Modern Approach to Islamic Banking”, 2004
- The Encyclopedia of Islamic finance, 2008
- Dictionary of Islamic Finance, 2011
- “A Tender Power” a Novel Elucidating Islamic Finance to a Layman, 2012
- Corporate Governance in Islamic Banks, 2014.

## COURSES DELIVERED IN

- Egypt, Malaysia, London, Luxemburg

## DR. DJEBBAR TIAB

Dr. Djebbar TIAB served as a Professor of Petroleum Engineering at the University of Oklahoma from July 1977 to June 2014. He is now a visiting professor at the African University of Science & Technology (AUST) in Abuja, Nigeria. Tiab is the owner and general manager of his Consulting & Training company United Petroleum Technology, LLC (UPTEC), registered in Oklahoma, USA.

Dr. Tiab is the author/co-author of over two hundred sixty (260) conference and journal technical papers in the area of pressure transient analysis, dynamic flow analysis, Petrophysics, natural gas engineering, reservoir characterization, reservoir engineering and injection processes. In 1975 (M.S. thesis) and 1976 (Ph.D. dissertation).

He is the senior author of the textbook “Petrophysics”: 1st Edition was published by Gulf Publishing Company in 1996; the 2nd, 3rd and 4th updated editions were published by Elsevier in 2004, 2012, and 2015. Petrophysics is available in Chinese, Russian and soon in Portuguese and Spanish. He has co-authored three research books titled “Productivity Equations for Oil Wells”, “Petroleum Reservoir Characterization – Interwell Connectivity”, published in 2009 by VDM Publishing House, and “Analytical Solutions to Productivity and Pressure Transient Equations” published by VDM & LAP Lambert Academic Publishing AG& Co., August 2010.

Dr. Tiab has consulted for a number of oil companies and offered training programs in petroleum engineering in the U.S.A. and overseas. He worked for over two years in the oil fields of Algeria for Alcore, S.A., an association of Sonatrach and Core Laboratories. He has also worked and consulted for Core Laboratories and Western Atlas in Houston, Texas, for four years (1990-1993) as a Senior Reservoir Engineering Advisor.

He received the 1995 SPE Distinguished Achievement Award for Petroleum Engineering Faculty. He also received the technical 2003 SPE Formation Evaluation Award for “Outstanding achievements in Petrophysics and reservoir engineering.” Dr. Tiab received in November 2013 the Africa Education Leadership “Best Professor in Petroleum Engineering” Award. Dr. Tiab is a member of the Russian Academy of Natural Sciences.

## EDUCATION

- B.Sc Petroleum Engineering
- M.Sc Petroleum Engineering
- Ph.D Petroleum Engineering

## MAJOR CONTRIBUTIONS TO OIL & GAS INDUSTRY

Dr. Tiab has significant contributions to the Oil & Gas Industry

- Dr. Tiab introduced the **pressure derivative technique**, which revolutionized the interpretation of pressure transient test analysis
- Published more than 260 technical papers
- Developed patents for CORE LAB in the area of reservoir characterization (identification of flow units)

## PORTFOLIO OF COURSES

- Pressure transient analysis
- Dynamic flow analysis
- Petrophysics
- Natural gas engineering
- Reservoir characterization
- Reservoir engineering and injection processes

## **PATEEL PAPAZIAN, CPA**

Pateel has more than **20 years** of professional experience both in the USA and Lebanon. A Certified Public Accountant from the state of California. She has worked in public accounting (CPA firms) for over nineteen years, including nine years in the USA.

As a Director at KPMG – Lebanon from 1998 to 2008, she has audited clients including commercial companies and non-profit organizations reporting under IFRS and USGAAP. She was also in charge of the ‘Train the Trainers Program” at KPMG. She was responsible for the audits of banks, manufacturing companies, higher education institutions, non-governmental organizations (NGOs) and funds granted by European Agencies and the U.S. Federal Government.

In 2008, she moved to the microfinance sector as the Chief Financial Officer (CFO) of one of the leading microfinance institutions in Lebanon where she was responsible for the overall financial management of the Institution. In charge of overseeing all the financial transactions, to ensure conformity with IFRS.

In 2010, she joined the American University of Beirut (AUB) as Director of Financial Reporting and Compliance and was in charge of planning, supervising, coordinating and performing complex financial analysis, accounting process and control analysis, internal and external reporting and other related work.

Pateel has been working as a self-employed financial trainer and consultant since October 2012. Her curriculum as a financial trainer includes seminars on Financial Accounting (IFRS, USGAAP, IPSAS), Financial Management Essentials for Non-Finance Professionals, Management Accounting (Budgeting and Cost Control), Financial statements analysis (includes financial modeling using excel) and Asset management. She delivers customized trainings in the Middle East, Europe and US in various industries such as oil & gas.

She has delivered some of the courses at Kuwait Petroleum Corporation (KPC), Qatar Petroleum (QP), Qatar Finance and Business Academy (QFBA), China National Offshore Oil Corporation (CNOOC) in Austin, Texas, Aker Solutions ASA (Norwegian oil services company) in UK and Etihad Rail in UAE.

Pateel is fluent in four languages: English, Arabic, French and Armenian.

## **EDUCATION**

- BBA – Bachelor of Business Administration
- EMBA – Executive Master of Business Administration
- CPA – Certified Public Accountant

## **PORTFOLIO OF COURSES**

- Budgeting and Cost Control
- Cost Management and Budgeting
- IFRS for Oil and Gas
- Financial Analysis excel modeling
- Financial Management Essentials for Non-Finance Professionals

## **COURSES DELIVERED IN**

UK, USA, Qatar, Kuwait and UAE

## DR. MAKSIM SONIN, PMP®

Dr. Sonin is a resourceful and performance-driven certified Project Management professional, with **18 years** of international (Europe, Middle East, CIS countries) experience in delivering results even beyond expected projections, in the fields of greenfield/brownfield projects design, planning, execution, with **\$14.5 billion** worth of oil and gas industry projects behind. Regarded for excellent interpersonal, presentation and leadership skills, particularly demonstrated in multicultural environments. Gained skills are a rare combination of, both Oil & Gas Technical and Financial academic knowledge, and years of on-site experience, which allows for a more thorough insight and versatile approach to project's challenges.

Dr. Sonin has led multi-disciplinary teams across Procurement, Engineering, Project Controls, and other project sections, and supervised personnel with diverse cultural backgrounds while successfully negotiating his way through challenging situations. He has served on very responsible positions such as Project Execution Manager and Project Manager. He has consistently demonstrated broad technical and project management to achieve sa execution of work, within the timeline he agreed, below budget and delivering a quality outcome.

He has been involved in full life cycle project management expertise and involvement in large scope international projects (upstream, midstream and downstream). He has demonstrated practical experience in all project stages, by utilizing both western and European project management approaches. He is instrumental in following multidisciplinary approach to project planning in combination with hands-on field experience.

Dr. Maksim started professional career as a site engineer amplifying academic skills with valuable hands-on field experience. This combination has enabled him to cover all aspects required for efficient project planning, by integrating expert Oil & Gas and Financial theoretical knowledge with an awareness of on-site construction activities and their relation with the office

## EDUCATION

- B.Sc in Construction, Maintenance and Operation of Oil & Gas Facilities
- B.Sc in Finance and Financial Management Services
- M.Sc in Innovative Technologies in Construction & Maintenance of O&G Facilities
- PhD in Oil & Gas Technologies

## CORE COMPETENCIES

- Full life cycle Project Management
- PM Consulting and Business Focus
- Trainings and lectures
- Audit & Optimization

## PUBLICATIONS & PRESENTATIONS

- Patent Author: Offshore storage (No. 133818 dated 27/10/2013)
- Published over 25 scientific articles in leading industry-specific periodicals
- Delivered speeches and presentations at international conferences, on oil & gas industry related topics

## MEMBERSHIP

- Project Management Institute (PMI). Certified Project Management Professional (# 1989674) | PMP®.
- The International Association for Contract and Commercial Management | IACCM.
- The Society of Petroleum Engineers | SPE International

## DR. ISMAIL MAHGOUN

Dr. Ismail Mahgoub is a former associate professor of Petroleum Engineering at the Faculty of Engineering, Cairo University. Dr. Mahgoub is a Petroleum Engineer with more than **35 years** of extensive experience at several oil basins worldwide. He started his practical professional career in parallel to his academic occupation.

Since 1983, he has been involved in the petroleum sector by presenting his reservoir engineering consultancy services at Gulf of Suez Petroleum Company (GUPCO-Egypt), Kuwait Petroleum Corporation (KPC), Western Desert Operating Petroleum Company (WEPCO-Egypt), and Kuwait Oil Company (KOC). Dr. Mahgoub is the author and/or co-author of tens of papers in the most refereed bulletins and journals and has presented several papers at international conferences.

Dr. Mahgoub expressed valuable experience in the continuing education domain. In this respect, he instructed tens of petroleum engineering technical courses in many countries. Dr. Mahgoub is an active SPE member for 35 years. He is also a member of the Supreme Council of Universities in Egypt (Engineering Education Sector) since 2008.

Dr. Mahgoub is currently occupying the position of Professor and Petroleum Engineering Department Head, at the Future University in Egypt (FUE).

## EDUCATION

- B.Sc Petroleum Engineering
- M.Sc Reservoir Engineering
- PhD Reservoir Engineering

## PORTFOLIO OF COURSES

- Reservoir Fluid Properties (Basic PVT)
- Advanced Reservoir Fluid Properties & Equation of State (EOS)
- Gas Reservoir Engineering
- Applied Routine & Special Core Analysis
- Transient Well Test Analysis & Design
- EOR / IOR Applications
- Well Performance & Production System Analysis
- Petroleum Engineering Workshop (2- 3 weeks)
- Reservoir Management & Field Development

## COURSES DELIVERED IN

Algeria, Syria, Tunisia, UAE, Qatar, Kuwait, France, Spain, Saudi Arabia and Yemen

## MR. PETER HENDRY

Peter Hendry has 25 years' experience in the Oil & Gas Industry, having spent majority of his time in Oil Trading. He possesses extensive and wide-ranging trade management expertise, spanning; Crude Oil, Products, Gas, Specialties and Logistics. He has Midstream processing experience & excellent knowledge of Upstream E&P. His current focus is on investment finance - modelling, assessing and negotiating commercial deals, structuring finance, often using a mixture of equity, debt and mezzanine solutions to optimize investments in, and returns from, underlying assets.

Peter has been involved in strategic positioning, planning and investment. Sourcing new global business opportunities for investment around upstream and midstream oil, gas, petrochemical and energy projects (including renewables and mega batteries). bringing global expertise, experience and ideas to provide specialist advice. Areas of expertise include: physical trading of crude oil, feedstocks, petroleum products and specialties, NGL, LPG, LNG, strategic planning and market analysis, hedging strategies and derivatives trading, refinery operations, economics and processing deals, logistics, shipping and insurance, bunkering, marketing and distribution, trade finance, venture capital and private equity investment, oil block trading, E&P, investment analysis, PSA's, farm in/out, energy portfolio management for family offices, military contracts, GTL, Fracking, project management, compliance, power generation, renewable energy, recycling, A&D, M&A, SPV's, etc. Deal facilitation. Deal structuring and financial models. Project Management. Help with new start-ups and business plans. Training and Coaching. Expert witness.

Peter has led teams of traders and operations staff for the trading of Petroleum Products worldwide. Negotiating throughput and storage agreements. Managing supply logistics, inventory and shipping. Initiating sales of these products to trans-Atlantic destinations. Successful track record for new business development. Inputting ideas and market predictions and contributing to the management of Mazaikaia Nafta Refinery, which influenced feedstock selection, production and the up-grading of the plant. Proposing and analyzing investment into new downstream projects. i.e. a Gasoil de-sulphurisation plant in Rotterdam, Crude processing for Bitumen manufacture, etc.

Peter received Caltex Oil's Star Award for Innovation in June 1991. An award given for initiating and motivating changes to the Caltex Milnerton Refinery, which permitted the commencement of bulk exports of Bitumen.

In 25 years of his career, Peter has served on the following positions:

- Head of Trading – Nekton-Global DMCC, Dubai, UAE
- Managing Shareholder – TBT & Consulting, Geneva, Switzerland
- Executive Director – J.P. Morgan Commodities, Geneva, Switzerland
- Trading Manager – Optima Energy SA, Geneva
- Trading Manager – Petroval SA, Geneva
- Senior Trader (Fuel Oil) – Caltex Oil Trading (Singapore) Pte, Singapore
- Crude Oil Trader – Caltex Oil Trading (Singapore) Pte, Singapore
- Corporate Planner – Caltex Oil Trading (Singapore) Pte, Singapore
- Senior Products Trader – Caltex Oil (South Africa) Pty Ltd., Cape Town, South Africa

## EDUCATION

- B.Sc. (Hons) Applied Science
- HND Applied Physics (Renewable Energy)

## PORTFOLIO OF COURSES

- 5-Day – Crude Oil Evaluation, Economics & Pricing
- 3-Day – Commercial Aspects of Oil Refining
- 3-Day – International Oil Supply and Trading

## COURSES DELIVERED IN

United Kingdom | Switzerland | Singapore | South Africa | Bahrain

## **OLGA LABAI**

Seventeen years of professional experience in providing legal advice and services mainly within the energy sector - mix of both contentious and non-contentious experience acting for major operator and solid contractor, covering upstream, downstream and mid-stream oil and gas.

Areas of expertise include:

- Major dispute resolution
- Industry contracts negotiating and drafting
- Managing external counsel (annual budget over \$1m)
- Litigation, regulatory framework issues
- Supply Chain Management legal issues

Petro Chemical offshore legal experience is related to working for the Sakhalin Energy Investment Company which represents a substantial oil and gas producing facilities in the Russian Far East (Sakhalin-2 project). The completed asset is operated by a transnational consortium of which Royal Dutch Shell and Gazprom are the largest shareholders. The Asset is managed under the first Russian Production Sharing Agreement (PSA). The «Sakhalin-2» project represented a ground breaking multi-billion-dollar investment in developing a technologically advanced network of integrated assets including: offshore oil and gas platforms, pipelines and an LNG plant with the oil/gas offloading facilities.

Onshore legal experience is hands on work supporting daily operations of major drilling/oilfield services contractor – Weatherford with major focus on revenue-generating contracts and general legal matters.

In current role of Founder/Director of OGC, Olga provides contract related consultancy services to various OGC clients - operators, suppliers and contractors of any tier.

- 2014 – present | Oil & Gas Consultants, Dubai, UAE | Director
- 2012 – 2014 | Weatherford, Dubai, UAE | Legal Counsel, Iraq
- 2005 - 2012 | «Sakhalin Energy Investment Company, Ltd.», Yuzhno-Sakhalinsk, Russia | Legal Advisor
- 2004 - 2005 | «Sakhalin Energy Investment Company, Ltd.», Yuzhno-Sakhalinsk, Russia | HR Advisor
- 2002 - 2004 | «Aspect Legal Consultancy», Vladivostok, Russia | Legal Advisor.

## **EDUCATION**

- Far Eastern State University, International Law | Vladivostok

## **PORTFOLIO OF COURSES**

- LNG Sales and Purchase Agreements, Dubai, UAE
- Understanding of how LNG works, Dubai, UAE
- Is LNG oversupply a myth or reality? Dubai, UAE, Public event for Dubai LNG business
- Understanding Oil and Gas Contracts – Exploration and Production, Dubai, UAE
- Understanding Terms and Conditions in the Contract, Dubai, UAE | Public training for Energy Industries
- Liquidated Damages: All You Need to Know, Dubai, UAE | Public training for Energy Industries Counsel
- Legal Aspects of Commercial Contracts, Advanced Practitioner, Oman, Qatar, UAE | Syndicated training
- Contracts and Legal Awareness, Dubai, UAE
- Efficient Claims Management in Oil and Gas Contracts, Dubai, UAE

## **COURSES DELIVERED IN**

- Dubai, Oman, Qatar, Angola, London

## MR. SAKET MODI

Mr. Saket Modi is a London based financial trainer and consultant with over 20 years of experience. He has designed and facilitated workshops for finance professionals from over 50 countries in North America, Europe, Middle East, Africa and Asia. He is currently a Director at Square Mile Global Consulting, UK which offers customized solutions in financial training and has previously worked with Lloyds Bank, Ernst & Young (E&Y) and PricewaterhouseCoopers (PwC).

Mr. Modi's workshops cover all aspects of training around financial reporting and analysis (IFRS/IPSAS), financial instruments and CFA® exam preparation. He has spent considerable time working, advising and training in matters relating to IFRS/IPSAS and has provided services to global banks and financial institutions, oil and gas, energy companies, multinational organizations, government and non-profit organizations, training and educational institutions and accounting, law and other professional services firms. He has written material on Accounting for Financial Instruments in IFRS for Institute of Chartered Accountants in England and Wales (ICAEW) and was invited by the International Auditing and Assurance Standards Board® (IAASB®) to present on IFRS 9 Financial Instruments at their board meeting in New York.

In addition to being a Chartered Accountant (ICAI), Saket holds IFRS Certificate from the ICAEW and an IPSAS Diploma from CIPFA. He is a CFA® Charterholder.

## EDUCATION

- CA, CFA®, IFRS Certificate, IPSAS Diploma
- MSc. Multinational Accounting & Financial Mgmt.
- Bachelor's in Accounting & Auditing

## PORTFOLIO OF COURSES

- IFRS Accounting for Derivatives and Hedging
- IFRS 9 Financial Instruments
- IFRS 16 Leases
- IFRS Technical Update
- Oil & Gas Accounting and Financial Management
- IFRS for Banks and Similar Financial Institutions
- Comprehensive Workshop on Application of IFRS (includes first time adoption)
- IFRS Financial Statement Analysis
- Comprehensive Workshop on Application of IPSAS (includes first time adoption)

## COURSES DELIVERED IN

UK | Ireland | Italy | Switzerland | France | Croatia | Macedonia | Trinidad | Jamaica | UAE | Saudi Arabia | Qatar | Oman | Kuwait | Ethiopia | Ghana | Tanzania | South Africa | Mauritius | India | Sri Lanka | Singapore | Malaysia | Russia, | Papua New Guinea | Solomon Islands | Fiji

## MR. SUNIL PULLARCOT

Sunil has more than 37 years of industrial experience, with more than one third of which is in the Oil & Gas industry. During his career, he had the opportunity to work in a multitude of disciplines in process industry like, QA/QC, Engineering (Static & Rotating Equipment), Project Management, Construction Management and Commercial. At Kuwait Oil Company, he has been a taskforce member for developing standards related to (a) Piping Material Classes, (b) Selection Criteria for Heat Exchangers, (c) Shell & Tube Heat Exchangers and (d) Plate & Frame Heat Exchangers.

Sunil has been deeply involved in industrial training on topics related to Pressure Vessels, Heat Exchangers, Storage Tanks, Plant Piping, Pipelines, NDT and Welding etc. In his endeavor to share his valuable and unique knowledge/experience with the forth coming generation, he has authored **THREE** books:

1. **Practical Guide to Pressure Vessel Manufacturing**, Published by Ms. Marcel Dekker Inc./ Taylor & Francis, New York, USA
2. **Above Ground Storage Tanks- Practical Guide to Construction, Inspection & Testing**, Published by Ms. Marcel Dekker Inc./ Taylor & Francis, New York, USA
3. **Practical Guide to Fabrication, Installation, Inspection, Testing & Commissioning of Process Plant Piping**, under publishing by Ms. Marcel Dekker Inc./ Taylor & Francis, New York, USA – due in market by mid-2019.

## EDUCATION

- B.Sc. Engineering in Mechanical Engineering – University of Kerala (College of Engineering, Trivandrum)
- Master of Technology in Mechanical (Production) – Cochin University of Science and Technology (CUSAT)
- Diploma in Labor Law with Administrative Law from Annamalai University

## PORTFOLIO OF COURSES

- 2-Day – Welding for Engineers
- 2-Day – Interpretation of Radiographs
- 5-Day – Manufacture, Inspection & Testing of Pressure Vessels
- 5-Day – Manufacture, Inspection & Testing of Heat Exchangers
- 5-Day – Construction, Inspection & Testing of Storage Tanks
- 5-Day – Fabrication, Erection, Inspection & Testing of Plant Piping
- 2-Day – NDT for Engineers
- 1-Day – Distortion & its Control in Pressure Vessel Manufacture

## PUBLICATIONS

- *Optimum Specification & Quality Requirements for Pressure Vessels*, Hydrocarbon Processing Journal from Huston, February 2007 issue.
- *Defect Analysis of an Ammonia Storage Tank*, Hydrocarbon Processing Journal from Huston, April 2007 issue
- *Risk Based Inspection (RBI), a Panacea for Plant Failures???* Hydrocarbon Processing Journal from Huston, May 2009 issue
- *Quality Audit & Reporting for Pressure Vessels Manufacturers*, Inspectioneering Journal, November/December 2009 issue
- *Review of Radiography*, World Pipelines Journal from UK, June 2012 Issue

## COURSES DELIVERED IN

India | Malaysia (Malaysia & Sarawak) | Kuwait | UAE
